Report of the Board of Directors

Mirova Global Sustainable Equity Fund

Underperformance relative to the benchmark during the period was driven mainly by security selection within the Materials and Financials sectors. More broadly, the portfolio's lack of exposure to the traditional Energy sector was a relative detractor given the sector's strong performance relative to the broad market. Over longer timeframes, the strategy's lack of traditional Energy exposure has contributed to relative results. The strategy's focus on long-term secular trends around the environment, technology, demographics, and governance often results in a growth bias to the portfolio, and many longer-duration stocks in the portfolio sold off during the year. The portfolio's overweight to the Information Technology sector detracted as a result as well.

In terms of security selection, within the Materials sector, Ecolab was the largest relative detractor, with the majority of the stock's year-to-date underperformance occurring during the first two months of the year after the company issued poor guidance indicating their end markets in hospitality had not fully recovered from Covid. Within Materials, the market also rotated into more cyclically exposed, lower quality companies that were expected to benefit from rising commodity prices, such as metals & mining where the portfolio has no exposure. Within Financials, Signature Bank was the largest relative detractor year-to-date given the macro backdrop and digital asset volatility, as a portion of its customers' deposits are tied to the digital asset industry.

The worst performers overall for the period were Orpea and Signature Bank. French owner and operator of elderly care homes Orpea was a company that we had been actively engaging with following controversies that came to light in January 2022 including mistreatment of patients and misallocation of public funds. We proposed that it become a mission-driven company under French law to improve transparency and its HR policy, thus helping employees improve their care for the elderly. We had seen positive early signs from the new management team. From a portfolio management perspective, our initial rationale to invest in Orpea was its position as a global leader in elderly care and nursing home facilities – an incredibly important space with excellent long-term opportunities. Valuation was very attractive when the position was initiated, and we continued to see upside potential in the stock following the controversy coming to light based on updated valuation models. Even in our worst-case scenario, there was a slight upside. Financially, we still were motivated to maintain the position while we waited to see improvement as a result of our engagement efforts. Unfortunately, that changed when Orpea issued preliminary first-half results in September, which showed a decline in the company's financial performance that was expected to continue for the second half of the year. At the same time, the company needed to confirm whether debt covenants could be met. While engagement with the company continued to be important from an ESG perspective, from a financial perspective we were not willing to hold the risk in the portfolio. As a result of low liquidity and higher risk, we ultimately decided to remove Orpea from the portfolio in September.

Contributors to relative results included the portfolio's underweight to the Communications Services sector, the worst-performing sector in the index, as well as the overweight to the more defensive Health Care and Utilities sectors. Security selection in Information Technology was also additive. Within Information Technology, Mastercard and Visa were the top relative contributors as both stocks held up much better than the broader sector throughout the year.

The best performers overall for the period were global leaders on diabetes and obesity treatments Eli Lilly and Novo Nordisk. Eli Lilly performed well on continued optimism on the opportunity related to the company's novel treatment for diabetes and obesity as well as positive results from Biogen's late-stage studies on its Alzheimer's disease treatment. Novo Nordisk performed well given its robust core business in diabetes and obesity with expected double-digit revenue growth and encouraging ongoing trials.

Finally, while the portfolio's overweight to Europe and underweight to the US detracted from relative results during the earlier part of the period, underperformance of U.S. equities in the last few months of the year led to a net positive impact overall for the full year.

We have made several adjustments to the portfolio year-to-date and broadly believe the portfolio is comprised of high-quality companies well positioned to address long-term secular trends that are trading at very attractive valuations. As we expect market volatility to continue in the near term until there is a higher level of visibility on the persistence of high inflation, interest rate increases, and underlying economic growth, we will look to take advantage of disconnects between current stock prices and long-term value of companies.

Mirova US Sustainable Equity Fund

As of the end of December 2022, the Mirova US. Sustainable Equity Fund – I/A (USD) outperformed the U.S. market, represented by the S&P 500® Index, since inception on 7 June 2022. The I/A (USD) share class returned -5.37%, outperforming the S&P 500® Index, which fell -6.81%.

Over the full year, underperformance relative to the benchmark during the period was driven mainly by security selection within the Financials, Materials, and Health Care sectors. More broadly, the portfolio's lack of exposure to the traditional Energy sector was a relative detractor given the sector's strong performance relative to the broad market. The strategy's focus on long-term secular trends around the environment, technology, demographics, and governance often results in a growth bias to the portfolio, and many longer-duration stocks in the portfolio sold off during the year. The portfolio's overweight to the Information Technology sector detracted as a result as well.

In terms of security selection, within Financials, Signature Bank was the largest relative detractor year-to-date given the macro backdrop and digital asset volatility, as a portion of its customers' deposits are tied to the digital asset industry. Within the Materials sector, Ecolab was the largest relative detractor, with the majority of the stock's year-to-date underperformance occurring during the first two months of the year after the company issued poor guidance indicating their end markets in hospitality had not fully recovered from Covid. Within Materials, the market also rotated into more cyclically exposed, lower quality companies that were expected to benefit from rising commodity prices, such as metals & mining where portfolio has no exposure. Security selection within Health Care detracted overall mainly due to not owning certain names that are part of the benchmark and performed strongly during the year.

The worst performers overall for the period were Signature Bank and SVB Financial. SVB was lower due to deposit base pressure as its customers experienced reduced investment flow in a difficult market environment. We believe SVB's synergistic banking franchise in the innovation tech and healthcare sectors has strengthened in this challenging environment, and that its competitive advantages including deep sector expertise, unique relationship networks, and experience managing through volatile tech cycles position it well for renewed growth.

Report of the Board of Directors

Contributors to relative results included the portfolio's underweights to the Communications Services and Consumer Discretionary sectors, the worst-performing sectors in the index, as well as the overweights to the more defensive Health Care and Utilities sectors. Security selection in Information Technology was also additive. Within Information Technology, First Solar performed strongly on the passing of the IRA in the U.S., and Mastercard held up much better than the broader sector throughout the year.

The best performers overall for the period were First Solar and global leaders on diabetes and obesity treatments Eli Lilly. Eli Lilly performed well on continued optimism on the opportunity related to the company's novel treatment for diabetes and obesity as well as positive results from Biogen's late-stage studies on its Alzheimer's disease treatment.

We made several adjustments to the portfolio during the year and broadly believe the portfolio is comprised of high-quality companies that are well positioned to address long-term secular trends and are trading at very attractive valuations.

Mirova Europe Sustainable Equity Fund

Net of fees fund performance from 31/12/2021 to 31/12/2022: **Mirova Europe Sustainable Equity Fund** I/A (EUR): -14.39%, **Mirova Europe Sustainable Equity Fund** R/A (EUR): -15.09%
Benchmark **MSCI EUROPE DNR**: -9.49%

Macro Environment
With a historic crash in bonds and significant declines in equities, 2022 will be one of the worst years for financial markets since World War II. The latter have evolved in three stages.

Before the outbreak of the war in Ukraine, the market was still wondering whether inflation was sustainable or transitory and what the impact of the Omicron variant would be. The war in Ukraine, coupled with a surge in energy and commodity prices and an embargo on Russian gas, has radically changed the outlook. Shortages of raw materials, power cuts, soaring inflation, risk to growth...

They led the American and European central banks to change their strategy. Most of them have embarked on a cycle of raising key interest rates and reducing their balance sheets. Fed raised its key rate from 0.25% to 4.50% - with four consecutive 75 bp hikes between June and November! This was unprecedented. The ECB started later, in July, with a 200bp rate hike until December. This led to a real bond crash. US 10-year yield have risen from 1.40% at the beginning of 2022 to a high of 4.25% on October 21. In Germany 10-year yield went from a negative yield at the beginning of 2022 (-0.12%) to a high of 2.45% in late October.

The effect of this monetary policy was only felt at the end of the year in the United States on inflation in November, with an initial deceleration. It also started to show up in Europe at the end of the year. Anticipating the end of the tightening, the equity markets rebounded violently in the last three months of the year.

The European stock markets limited the damage (around -12%) thanks to the easing of tensions over gas prices during the autumn and the weakness of the euro against the dollar. Among the rising assets in 2022 are oil and the dollar. In terms of sectors, energy and defense were the big winners of the year. Banks had a very respectable year-end performance, thanks to a good year against a backdrop of rising interest rates. Taking advantage of its defensive status, the pharmaceutical sector also performed well. On the other hand, the real estate sector is struggling, as is technology, which is very sensitive to rising interest rates, and the distribution sector, which is penalized by inflation.

Fund Performance and positionning

Both stock selection and sector allocation had a negative impact on the Fund's relative performance.

The absence of oil stocks for ESG reasons contributed negatively by -2%, as well as the technology overweight which costs -1%. In terms of stock selection, the underperformance is mainly explained by Faurecia (automotive supplier, contribution of -1.7%), Orpea (healthcare homes, contribution of -1.4%), ITM Power (Hydrogen, contribution of -0.55%), Worldline (Data & Transaction processors, contribution of -0.5%) or Biocartis (life science & diagnostics, contribution of -0.5%).

On the other hand, the portfolio benefited from its exposure to the pharmaceutical sector with Astrazeneca (contribution of 0.55%) or Sanofi (contribution of 0.45%), its exposure to the financial sector with BBVA (contribution of 0.45%) or KBC (contribution of 0.45%), Unicredit (contribution of 0.40%) or Aviva (Insurance, contribution of 0.40%), its exposure to utilities with EDF (contribution of 0.75%), Acciona Energias Renova (contribution of 0.35%) or exposure to automotive with Renault (contribution of 0.3%).

Mirova Euro Sustainable Equity Fund

Fund Performance

During the year 2022, the fund underperformed its benchmark by 1.10 points, with a performance of -14.57% compared to -12.47% for the **MSCI EMU** (Share Class I/A EUR).

The main drivers behind the fund performance were the asset rotation from growth stocks to value linked to the tightening of monetary conditions and new regulations such as the Inflation Reduction Act (IRA) offering long term government support for low-carbon energy solutions. The underperformance of the fund against its benchmark is mainly due to Energy (we are not invested at all in the Oil & Gas sector) and Healthcare sector (negative impact from selection), as well as the Financials and Materials sectors, albeit to a lesser extent. Conversely, the Consumer Discretionary, Communication Services, and mainly Utilities sectors weighted positively on the relative performance of the fund, as did the Industrials and Technolgy sectors.

Report of the Board of Directors

The top five contributors were Munich Reinsurance (+22.29%), Deutsche Telekom (+18.64%), Acciona Renovables (+11.71%), Iberdrola (+13.81%), Axa (+6.13%).

The five detractors were Orpea (-91.57%), ASML (-27.90%), Cie Saint-Gobain (-24.02%), Faurecia (-63.46%), Dassault Systèmes (-35.78%).

Fund Flows and Positioning

Over the year 2022 as a whole, inflation, first linked to pressure on global supply chains following the softening of Covid restrictions and then accelerated by the war in Ukraine and energy prices increase due to constraints on gas supply, has forced central banks to tighten their monetary policies. Raising interest rates and investors' concerns about the impact of these policies on the economic growth resulted into an asset rotation from growth stocks to value starting at the beginning of 2022. The major change in the fund positioning was the fact that we significantly increased our exposure to the Financials, mainly via Banks. During the last quarter we significantly increased our exposure to the financials from 15.55% to 19.44%, overweighting the index by 3.89% at the end of the year. We turned constructive on the European Banks at that time despite the risks that economy could enter into a recession in 2023. This may appear counter-intuitive; however, in several ways the fundamental dynamics for the sector stand in contrast to those of prior recessions: rates are rising, estimates are being revised up, distribution is increasing and share count is falling. Shareholder distribution (dividends and buybacks) and valuation were also key elements to our strong positive view on Banks. We strengthened our positions on KBC, Intesa and bought Banco Santander in the last quarter. Also, new regulations such as the RePower EU, Fit for 55 in Europe or the IRA in the US creates significant opportunities within the environmental thematic. Furthermore, energy crisis in Europe arisen from shortage of gas supply following the war in Ukraine contributes to an acceleration of energy transition investments as it created unprecedent need for relocation of energy supply. That's why we increased again our exposure to the utilities sector, from 7.82% to 10.54%, being overweighted by 2.7% in regard to the index. As a matter of fact, we reinforced some strong convictions as Acciona Energia Renovables, EDP ERG and Iberdrola. Furthermore, we also entered Voltalia in the portfolio in the middle of the year. In the mean time, we significantly reduced our exposure to the Healthcare sector, the Information technology and the Industrials. In Healthcare, while we entered into UCB, Synlab and Euroapi, the strong underperformance of Morphosys, Fresenius SE, Grifols and Orpea explained why we are more Neutral with the index. Regarding Orpea we sold our position in late October as the new management announced massive asset write-downs and the opening of a reconciliation plan that will result in a write-off of claims, a conversion of claims into capital and thus a massive dilution of the historical shareholders. This announcement was not expected (see communication of the DG in the press on October 20 claiming that no bank renegotiation was on the agenda), it is violent (nearly 20% depreciation of the value of real estate assets reviewed) and little documented (information on the review of real estate assets is fragmentary and too brief in our opinion). Faced with a solvency that is no longer assured and a managerial communication that we consider deficient, we take the decision to sell our positions.

At the beginning of the year, we reduced our exposure to the communication services sector, due to the sale of JC Decaux and Publicis, but we reinforced Telcos operators (Orange and Deutsche Telekom). We are now in line with the benchmark. Main other movements made over the period have helped to reinforce the environmental and social impact of the portfolio. We sold LVMH, Amadeus and Inditex. In parallel, we have strengthened KBC Group, Veolia and joined two new companies: DSM, a Dutch company specializing in health, nutrition and biosciences, and Synlab, a German medical diagnostic laboratory (diagnostics for human and veterinary medicine, environmental analysis). In parallel, we built a line in Banco Santander, Mercedes and BMW and strengthened our position in UCB, Faurecia and Saint-Gobain. Finally, we lightened L'Oréal, ASML, Sanofi and completely released Linde and Siemens-Gamesa following Siemens Energy's OPA. We are still underexposed to the consumer discretionary sector as we fear about some decrease in net disposable income in Europe but conversely, we increased our exposure to Michelin and Renault. We are not exposed to the energy and real estate sectors. Finally, regarding our exposure to the financial sector, we are now signficantly above the index with 19.44% compared to 16.31% for the MSCI EMU.

Mirova Global Environmental Equity Fund

Fund performance:

During the year 2022, the fund underperformed its benchmark by 4.65 points, with a performance of -17.43% compared to -12.78% for the MSCI World (share class I/A (EUR))

The main drivers behind the fund performance were the asset rotation from growth stocks to value linked to the tightening of monetary conditions and new regulations such as the Inflation Reduction Act (IRA) offering long term government support for low-carbon energy solutions.

Inflation, first linked to pressure on global supply chains following the softening of Covid restrictions and then accelerated by the war in Ukraine and energy prices increase due to constraints on gas supply, has forced central banks to tighten their monetary policies. Raising interest rates and investors' concerns about the impact of these policies on the economic growth resulted into an asset rotation from growth stocks to value starting at the beginning of 2022. The portfolio strategy to invest in structurally growing companies that provides solutions that address climate change creates a bias to growth stocks which explains the fund underperformance during the year. However, new regulations such as the IRA in the US validate the strategy of the fund and creates significant opportunities within the environmental thematic. Furthermore, energy crisis in Europe arisen from shortage of gas supply following the war in Ukraine contributes to an acceleration of energy transition investments as it created unprecedent need for relocation of energy supply.

The stocks that contributed most to the performance during the year were well positioned to benefit from the IRA, notably Enphase (+54.33% gross return in 2022), Array Technologies (+31.27%), SolarEdge Technologies (+7.58%) and Shoals Technologies (+8.18%) which are four US technology companies providing solutions to improve efficiency of solar energy production. Alstom (+11.1%) was also among the best contributor to fund performance helped by a discounted valuation after a disappointing integration of Bombardier and a relative outperformance of European markets during the year.

Report of the Board of Directors

On the other end, the stocks that weighted most on the fund performance were Hain Celestial (-59.54%), Aptiv (-39.84%), ITM Power (-77.55%), Trimble (-38.21%) and Plug Power (-53.31%). Hain Celestial suffered from its exposure to Europe with lower consumer spendings and unfavorable dollar strength. Aptiv and Trimble suffered from their exposure to end-markets perceived as cyclical (respectively automotive and construction) as investors are concerned by economic slowdown. Plug Power and ITM Power are providers of innovative hydrogen solutions but still need to prove their ability to scale up.

Fund positioning:

The portfolio employs a thematic approach aiming to invest in eco-activity companies providing solutions or services that address climate change and create a positive environmental impact. Therefore, the fund has no constraints around traditional GICS sectors and has no investments in energy, health care and real estate sectors.

The fund aims to invest in companies providing solutions or services that address environmental issues around five themes, keeping them relatively balanced:

- Clean Transportation: electric vehicles, batteries and related materials.
- Low carbon energy equipment: wind, solar, batteries and low carbon hydrogen equipment.
- Low carbon energy developers and operators: renewable power developers and operators, residential distributed solar.
- Energy efficiency: industrial energy efficiency, green building and insulation.
- Carbon capture solutions.

Geographically, the portfolio breakdown is generally within 10% difference of the reference index regional weights even though individual country weights may deviate more significantly. At end of December 2022, the portfolio was overweighted on the US with an exposure of 74.8% compared to 68.2% for the MSCI World.

The fund continues to have a to tilt toward mid and small cap names as it targets to be exposed to companies from all stages of business model.

During the year 2022, one of the main changes was the start of a position in LG Energy Solutions, the largest battery manufacturer outside of China with a strong footprint in the US which is set to benefit from the Inflation Reduction Act. We also added a position in Alstom which benefited from a discounted valuation reflecting the disappointed integration of Bombardier and in Bentley Systems a leader of engineering software for infrastructure projects with a strong exposure to the US public works. We sold our positions in ITM Power as recent changes in governance have impacted visibility on the strategy. We also sold our position in Signify due to the exposure to the cyclical construction market in Europe and our position in Water Works Company as the company share price had a strong performance and valuation left limited potential upside in our view.

Mirova Europe Environmental Equity Fund

The portfolio is down -21.97% (share class I/A (EUR)), its benchmark is down -9.49%
2022 is dominated by energy crisis themes and geopolitical risks, inflationary pressures and supply chain disruption, accentuated by rising interest rates and economic slowdown. Against this unprecedented backdrop for Europe, European markets favoured commodity sectors (raw materials, fossil fuels), health, financials, however, industrials, technologies and alternative materials were oversold. Dispersion of sectoral performance within the MSCI Europe Index is strongly correlated to the macro.

With the outbreak of war in Ukraine and the specter of an energy crisis, the European Commission announced its “REPowerEU” plan to lower Europe’s dependence on Russian energy. In line with the structural themes promoted by the Green Deal and Fit for 55, Europe recognizes its desire to accelerate the deployment of renewable energy and the electrification of society to address the energy security issue. This acceleration is expected to translate into €1tn of investments in wind and solar by 2030, strengthening the growth prospects for OEMs and renewable energy developers. A scenario of sustainable geopolitical tension, which seems increasingly likely, would keep energy prices high and largely offset the rising costs experienced by players in the renewable energy sector. Reducing dependence on Russian fossil fuels will also involve investments in energy sobriety that companies exposed to energy efficiency and heat pumps will benefit from. Another lever highlighted by the Commission is the massive development of biomethane and green hydrogen. The fund is perfectly aligned with the European decarbonisation strategy which is expected to greatly accelerate the penetration of low-carbon technologies embedded into portfolio companies. The acceleration of the United States with the Inflation Reduction Act, a massive investment plan in green technologies and energy, will be a support factor, starting in 2023, for European companies related to eco-activities such as Vestas, Orsted, EDP, Acciona etc.

2023 could see new advances in funding the energy transition from the European Union to accelerate renewable energy deployment and energy efficiency. The challenge remains energy sovereignty as well as the reduction of emissions and costs. In 2022, Europe made a significant financial effort to support the energy shock for the economy. In 2023, we believe Europe could massively support European companies that meet RePowerEU’s ambitious goals (climate, environmental, sovereignty and technology leadership objectives).

In this unprecedented context of an energy crisis and the positioning of the market in risk-off mode, the main underperformance factors are linked to the absence of exposure to raw materials and fossil fuels, and the quality/growth and small/smid cap biases, which are part of the investment process, and contribute to the underperformance due to the market rotation.

The Fund’s investment process focuses only on companies with positive environmental impacts, oriented towards decarbonising the economy and protecting biodiversity.

In 2022, the portfolio is penalized by the underweighting of defensive sectors (telecommunications, healthcare, consumer staples, etc.), which are not in the environmental investment process.

The fund is heavily exposed to environmental solution providers in the amount of 86% of the portfolio, more than 42% of which are pure players in transition technologies.

Report of the Board of Directors

Mirova Future of Food Fund

No management report for the Sub-Fund Mirova Future of Food Fund that launched on November 15, 2022, as the period is not representative.

Mirova Women Leaders Equity Fund

In the year 2022, the portfolio is down -14.56% (share class I/A (EUR)), while the benchmark index MSCI World is down -12.78%. The underperformance vs. the benchmark is mainly attributable to Energy, which the fund has 0 exposure to while is the biggest contribution to the benchmark performance for the year, with an annual return of +55.62%. To a lesser extent, the underperformances were explained by underperformances in Consumer Staples and Materials. On the other hand, the outperformances were partly offset by outperformances in Communication Services, and to a lesser extent by the fund's strong cash position, outperformances in Industrials and Health Care, and Real Estate which the fund has 0 exposure to.

In Q4, we have invested in Mirova Euro Short-Term Sustainable Bond Fund, a short-term fixed income fund and an article 9 fund under SFDR. In 2022, both government and corporate bond yields remain at historical high level, driven by key central banks continuous interest rate hikes and fund outflows from equity market to bond market. We therefore invested in this Fixed Income fund to take advantage of the high rate level with a low rate curve sensibility, which we believe provides a large cushion to absorb potential rate increases. At of 2022 year-end, we had 2.36% in Mirova Euro Short Term Sustainable Bond Fund, and it has also contributed to a lesser extent to our Q4 outperformance vs. MSCI World.

Among our top 10 contributors were: Eli Lilly and Company (+42.46%), AstraZeneca PLC (+25.2%), Zurich Insurance Group Ltd (+19.79%), Array Technologies Inc (+43.37%), Xylem Inc. (+43.85%), Singapore Telecommunications Limited (+23.9%), ENGIE SA. (+8.33%), Allianz SE (+0.52%), Visa Inc. Class A (+2.47%), Vestas Wind Systems A/S (+1.13%).

Among our top 10 detractors were: Farfetch Ltd. Class A (-85.09%), NVIDIA Corporation (-47.19%), Ecolab Inc. (-33.26%), General Motors Company (-38.65%), Microsoft Corporation (-23.52%), Bright Horizons Family Solutions, Inc. (-46.94%), Estee Lauder Companies Inc. Class A (-28.16%), NeoGenomics, Inc. (-71.14%), Adobe Incorporated (-36.72%), Momentive Global Inc. (-64.74%).

In the year 2022, we have added Aviva, UCB, Roche, Xylem, Accenture, DSM to our portfolio, while having mainly increased our positions in Orange, International Flavors & Fragrances, General Motors, Ecolab, and Singapore Telecommunications. On the other hand, we have exited Burberry, Farfetch, Array Technologies, Ballard Power Systems, Mastercard, and Johnson Matthey, while having reduced our positions in Zurich Insurance, Eli Lilly & Co, Mondi, Intuitive Surgical and Sunrun.

At the end of 2022, the fund had 8.40% in cash and money-market products.

Mirova Global Climate Ambition Equity Fund

During 2022 the fund performance was -14.17% (share class I/A (EUR) and the MSCI World index performance was -12.78%. The fund underperformed the index by -1.39%. Biggest contributors were Enphase Energy, Bristol-Myers Squibb and Shoals Technologies. Biggest detractors were Tesla, NVIDIA and Plug Power.

Mirova Europe Climate Ambition Equity Fund

During 2022, the fund performance was -16.87% (share class N/A (EUR)) compared to -9.49% for the MSCI Europe index resulting in an underperformance of 7.38% over the year. The stocks that contributed most to the fund performance during the year were Novo Nordisk (+29.62 total return in 2022), AstraZeneca (+25%) and Argenx (+22.05%). On the other side, stocks that weighted most on the fund performance were ITM Power (-77.99% total return in 2022), Ambu (-57.48%) and Sinch (-70.81%).

Mirova US Climate Ambition Equity Fund

During 2022, the fund performance was -12.70% (share class I/A(EUR) compared to -18.12% for the S&P 500 index, resulting in an over performance of 5.42% over the year.
The stocks that contributed most to the portfolio performance were Enphase (+44.83% total return in 2022), Shoals Technologies (+151.48%) and Netflix (+56.4%). On the other side, the biggest detractors to the fund performance were Tesla (-64.42% return in 2022), NVIDIA (-50.27%) and Plug Power (-64.42%).

Mirova Global Green Bond Fund

Performance

In 2022, the fund returned -19.71% gross of fees, -20.16% net of fees (share class SI/A EUR), vs. -18.98% for the benchmark.
Positive factors to relative performance

- Allocation was slightly positive (+4 bps)
- Duration&Curve delivered value (+72 bps) as the fund was short on the eurozone, the US zone and the UK zone

Report of the Board of Directors

Negative factors to relative performance

Selection had an unfavourable impact, largely driven by our exposure to high bêta issuances. Orpea alone had a cost of 90 bps

Major positioning change

IG Credit exposure slightly increased in March and then in September.
Global duration was maintained below that of the benchmark during 2022, especially so in February and as at-end of August, when we reinforced this short positions.
The exposure to HY bonds has been reduced all over the year (from 9.5% to 6%).
The average rating is between BBB+ and BBB.

Positioning as end 2022

The Fund keeps on overweighting credit (60% versus 41% for the index) as we still believe this asset class is attractive in the long run when compared with largely-indebted sovereigns in the West.
The fund global duration remained short versus that of the index, with an emphasis on the eurozone as inflation will remain high in our opinion compared with the US.
We expect the US curve to steepen in 2023 (bull steepening).

Outlook

Mirova believes there is a decent probability that a recession is avoided in the US in 2023, while this looks harder to achieve in the UK and Continental Europe, unless the war in Ukraine ends;

Inflation is already cooling down ; central banks however will retain a hawkish stance as job markets remain buoyant, fueling the risk of a price-wage loop spiraling out of control – something that would destroy all the efforts they have achieved over the past quarters.

Mirova Euro Green and Sustainable Bond Fund

Performances

In 2022, the fund returned -19.53% net of fees (share class SI/A EUR), vs. -17.22% for the benchmark. The performance of the fund through the Barclays Bloomberg performance attribution was -19.07%.

- Allocation was negative (-1.16%). The long position on corporates cost as credit spreads widened versus government bonds. We increased our position on credit bonds in March when the LECPOAS index went up from 0.94 in January to 160. We also increased the position in October. The LECPOAS index that represent the spread between investment credit bonds and German government bond widened up to 234 mid-October but narrowed to 168 end of December.
- Selection was negative (-1.13%) mainly within the corporate sector due to high beta issues.
- Swap and government curves & duration positioning were positive (+0.47%), fund's duration was set lower than the index during Q2 and Q3 and in December. the swap spread curve significantly widened specially in February, April, and September but narrowed significantly during Q4 which was positive.
- Other (-0.04%)

Strategy

We implemented conviction positions on credit:

In January, we increased our exposure from 43% to 49.8%. In February, we took partial profits.

in March when the level of the LECPOAS index was close the 160 (highest levels of 2015 and December 2018), we increased our exposure to credit from 45% to 49.8%. In May, considering the economic slowdown, we reduced our exposure to 45%. In October and in November, (level of the LECPOAS index close to 200) we increased again our exposure on corporates to 47.1% and 49.5%. In December, we maintained this exposure close to 49.58% compared to 20.2% for the index (2.3 vs 0.9 in contributed modified duration).

Considering the historical widening in spreads, we consider that credit offer value in the long run compared to government bonds. The potential recession is partly taken into prices.

Sovereign exposure was increased from 24.7% to 27.5% end of December 2022 (versus 57.3% for the index). We continued to believe that sovereigns are less attractive than credit. Measured in contributed modified duration, the position was close to 2.2 vs 4 for the index. These government bonds are only Green Bonds from Chile, United Mexican States, Korea, Hungary, Slovenia, the Netherlands, Italy, France, Kingdom of Belgium, Ireland, Korea, and Spain.

We were over-exposed versus index on agencies, supra and quasi sovereign with 18.9% of the nav versus 15.9% for the index (1.4 in contributed modified duration versus 1.1 for the index). All these issues are Green and Social bonds.

In 2022, we actively moved from a short to a neutral duration versus index In December, we reduced again the duration from 6.6 to 6 versus 6.3 for the index.

The yield to maturity was at + 3.58% end of December 2022 versus + 3.34% for the index.

Report of the Board of Directors

ESG & impact profile

Mirova sticks to its core strategy: funding companies designing, producing, and marketing the services and products adapted to the low-carbon economy. 77% where invested in climate stability projects to limit global warming under 2° (SDG 9 and 13). 42% were invested in projects that contributes to healthy eco-systems (SDG 14 and 15) and 34% of the fund financed projects that bring solutions to resources through efficient and circular use of natural resources.

We increased the weight of Green and Sustainable Bonds in our Fund to 82% In December.

Our fund is in accordance with the 1.5-degree scenario compared to 2/2.5 for our index (Carbone 4 methodology).

Mirova Euro Green and Sustainable Corporate Bond Fund

Market conditions

The year 2022 marked the collective realization that many factors could no longer be considered as established: this is the case of peace in Europe, and consequently, unlimited access to energy and low inflation.

At the beginning of the year, central banks therefore changed their tone one after the other, suggesting monetary tightening earlier and stronger than initially expected. The conflict in Ukraine was initiated and then deepened, and discussions around an embargo on Russian oil in Europe reinforced the lasting nature of its impact on price increases, further reinforcing this need for monetary tightening, even if it meant eroding the potential for economic growth.

The zero-Covid strategy in China also penalized risky assets throughout the year. The lockdown slowed activity both in the country and internationally, aggravating fears of inflation peaks linked to a slowdown, if not a halt, in production chains.

The second half of the year was therefore quite logically that of rate hikes by central banks with magnitudes rarely seen in the last three decades in financial markets: 75 bps for the European Central Bank (ECB) and the US Federal Reserve (Fed), the Bank of Canada, the Swiss National Bank and even 100bps from Sweden's Riksbank.

At the end of the year, investors were looking for the "pivot" in monetary policy, but this did not seem to be on the agenda despite the first signs of slowing inflation. The fight against inflation will therefore continue, with undoubtedly less intensity, but over a longer period of time.

2022 financial performance

The fund underperformed the index, gross of fees, in 2022 (-165.2bp): we basically suffered from our exposure to Real Estate players, especially in the Nordics where higher rates have hardly affected valuations. Our long position on high yield and subordinated debt also had a major cost on our performance. This has only been partly offset with the good strategy on the curve positioning with a positive impact of 22.6bp only, vs. a security selection that had a cost of 141.1bp.

ESG & impact profile

Mirova sticks to its core strategy: funding companies designing, producing, and marketing the services and products adapted to the low-carbon economy.
Green, Social and Sustainable Bonds represented 54.2% of the fund as at end 2022.
Our Fund is in line with a 1.5°C scenario, vs. 4°C for the index (Carbon4 data).

Mirova Euro High Yield Sustainable Bond Fund

Investment context and milestones

The EI share class of Mirova Euro High Yield Sustainable was launched on July 7th 2022 in the following environment:

- NordStream 1 shutdown;
- Volatile rates dragged in one direction or another;
- Bear-market rally unfolding;
- High beta instruments under pressure;
- Successive waves of buying spree and short squeezes as the energy crises reached its climax shortly before the launch of the fund and started abating since then which was a tailwind for the absolute performance of the share class.

The ramp-up of the fund was run during a peak of credit spreads when prices averaged 86 of par, when spreads peaked around 600bp, level seen only in 10% occurrences in 2007-2022 time series.

Report of the Board of Directors

Investment thesis and decision

As a result, we decided to implement a long position on:

- super-cyclical (auto and auto part makers) and cleaner transportation;
- hybrid instruments which priced at maturity (for their deeply out the money pricing and convexity/call dynamics playing out into our favor) and by extension electric producers, leveraging on our internal tool and skillsets in subs;
- and financials (except REITS) which are usually unscathed by wave of defaults;
- not to mention low IG rating BBB- which we deemed not exposed to a downgrade yet still underpriced for BBB/BBB-.

With a rather defensive positioning BB/BB- on average and full investment with cash levels maintained below 5% we applied slightly short position on duration vs index hovering around 95.

Our selection targeted price makers over price takers in sectors under supply strain or bottlenecks and yearning for self-sufficiency in inflationary environment: Wabtec and Getlink in clean transportation, micro-chip with Infineon, in the waste treatment segment, Séché, Derichebourg, Darling, Covanta for their CHP plants or self-sufficient profiles (producing sometimes more energy than consumed), scarce resources usage (wood, aluminium, among others), and asset pooling (Loxam, Modular, inter alia).

We argue the key investment thesis of the fund with high emphasis on scarce resources subject to depletion, waste treatment and recycling, and efficient construction and buildings constitute the key pillars of circular economy combined with utmost attention to health and green/sustainable investment to reach our environmental and social objectives.

These mixes of sectors provide diversification and opportunities to find the best risk/sustainable/reward profile in companies playing the long game with remote default probability.

Mirova Euro Short Term Sustainable Bond Fund

Market context

The year 2022 marked the collective awareness that many factors could no longer be considered as established: this is the case of peace in Europe, and consequently, unlimited access to energy, and low inflation.

At the beginning of the year, central banks therefore changed their tone one after the other, suggesting monetary tightening earlier and stronger than initially expected. The conflict in Ukraine was initiated and then deepened, and discussions around an embargo on Russian oil in Europe reinforced the lasting nature of its impact on price increases, further reinforcing this need for monetary tightening, even if it meant eroding the potential for economic growth.

The zero-Covid strategy in China also penalized risky assets throughout the year. The lockdown slowed activity both in the country and internationally, aggravating fears of inflation peaks linked to a slowdown, if not a halt, in production chains.

The second half of the year was therefore quite logically that of rate hikes by central banks with magnitudes rarely seen in the last three decades in financial markets: 75 bps for the European Central Bank (ECB) and the US Federal Reserve (Fed), the Bank of Canada, the Swiss National Bank and even 100bps from Sweden's Riksbank.

At the end of the year, investors were looking for the "pivot" in monetary policy, but this did not seem to be on the agenda despite the first signs of slowing inflation. The fight against inflation will therefore continue, with undoubtedly less intensity, but over a longer period of time.

Performance

The fund was launched in June 2022, since inception, it returned -1.14% (share class SI/A (EUR)) gross of fees vs. -1.46% for the benchmark.

Positive factors to relative performance

Allocation was slightly positive (+16bps) thanks to the over exposure to credit bonds

- Duration & Curve delivered value (+25 bps) as the duration was below the benchmark's duration
- Selection was positive (+10 bps), high yield investments outperformed thanks to high carry return and tightened spreads

Major positioning change

- IG Credit exposure was maintained above the benchmark's exposure (around 65%)
- Global duration was maintained below that of the benchmark, between 92% to 99%
- The exposure to HY bonds has been increased in September (from 6% to 8%)

Positioning as end 2022

- The Fund keeps on overweighting credit (70% versus 25% for the index) as we still believe this asset class is attractive specifically on the short term bucket
- The fund global duration remained short versus that of the index

Report of the Board of Directors

Outlook

Mirova believes there is a decent probability that a recession is avoided in the US in 2023, while this looks harder to achieve in the UK and Continental Europe, unless the war in Ukraine ends. Inflation is already cooling down ; central banks however will retain a hawkish stance as job markets remain buoyant, fueling the risk of a price-wage loop spiraling out of control – something that would destroy all the efforts they have achieved over the past quarters.

Mirova Europe Sustainable Economy Fund

Net of fees fund performance from 31/12/2021 to 31/12/2022: Mirova Europe Sustainable Economy Fund I/A (EUR): -16.08%, Mirova Europe Sustainable Economy Fund R/A (EUR): -16.69%. Benchmark MSCI EUROPE DNR: -11.48%.

Macro Environment

With a historic crash in bonds and significant declines in equities, 2022 will be one of the worst years for financial markets since World War II. The latter have evolved in three stages.
Before the outbreak of the war in Ukraine, the market was still wondering whether inflation was sustainable or transitory and what the impact of the Omicron variant would be. The war in Ukraine, coupled with a surge in energy and commodity prices and an embargo on Russian gas, has radically changed the outlook. Shortages of raw materials, power cuts, soaring inflation, risk to growth...

They led the American and European central banks to change their strategy. Most of them have embarked on a cycle of raising key interest rates and reducing their balance sheets. Fed raised its key rate from 0.25% to 4.50% - with four consecutive 75 bp hikes between June and November! This was unprecedented. The ECB started later, in July, with a 200bp rate hike until December. This led to a real bond crash. US 10-year yield have risen from 1.40% at the beginning of 2022 to a high of 4.25% on October 21. In Germany 10-year yield went from a negative yield at the beginning of 2022 (-0.12%) to a high of 2.45% in late October.

The effect of this monetary policy was only felt at the end of the year in the United States on inflation in November, with an initial deceleration. It also started to show up in Europe at the end of the year. Anticipating the end of the tightening, the equity markets rebounded violently in the last three months of the year.

The European stock markets limited the damage (around -10%) thanks to the easing of tensions over gas prices during the autumn and the weakness of the euro against the dollar. Among the rising assets in 2022 are oil and the dollar. In terms of sectors, energy and defense were the big winners of the year. Banks had a very respectable year-end performance, thanks to a good year against a backdrop of rising interest rates. Taking advantage of its defensive status, the pharmaceutical sector also performed well. On the other hand, the real estate sector is struggling, as is technology, which is very sensitive to rising interest rates, and the distribution sector, which is penalized by inflation.

Fund Performance and positioning

The underperformance over 2022 is due to negative selection effects in the equity and credit sleeve. Other performance drivers (equity/bond allocation and duration/curve positioning) have positively contributed to the relative return. Especially the equity/bond allocation generated a gain of around 0.8% over the period via an equity underweight that fluctuated between 0% and - 5% during the first part of the year and an equity overweight that has moved around 3-4% since October.

Over the year the equity sleeve underperformed by about -7%. The absence of oil stocks for ESG reasons contributed negatively by -2%, as well as the technology overweight which costs -1%. In terms of stock selection, the underperformance is mainly explained by Orpea (healthcare homes, contribution of -1.4%), Faurecia (automotive supplier, contribution of -1%), ITM Power (Hydrogen, contribution of -0.75%), Kingspan (Building Materials, contribution of -0.6%) or Croda (Specialty Chemicals, contribution of -0.5%).

On the other hand, the portfolio benefited from its exposure to the pharmaceutical sector with Astrazeneca (contribution of 0.6%) or Sanofi (contribution of 0.4%), its exposure to the banking sector with BBVA (contribution of 0.4%) or KBC (contribution of 0.4%), its exposure to utilities with Acciona Energias, EDP or Iberdrola or exposure to Norsk Hydro (aluminium recycling, contribution of 0.3%),

The bond sleeve suffered overall from its higher credit sensitivity than the index in a context of widening spreads, and particularly from its exposure to Orpea which was removed from the portfolio at the end of October. Our overweight on defensive names at the expense of cyclical and financial issuers, as well as our structural short duration positioning compared to the benchmark partially mitigated our credit exposure. Over the year the bond sleeve underperformed by about -2%.

Audit report

To the Shareholders of
Mirova Funds

Our opinion

In our opinion, the accompanying financial statements give a true and fair view of the financial position of Mirova Funds (the "Fund") and of each of its sub-funds as at 31 December 2022, and of the results of their operations and changes in their net assets for the year then ended in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements.

What we have audited

The Fund's financial statements comprise:

- the combined statement of net assets for the Fund and the statement of net assets for each of the sub-funds as at 31 December 2022;
- the securities portfolio as at 31 December 2022;
- the combined statement of operations and changes in net assets for the Fund and the statement of operations and changes in net assets for each of the sub-funds for the year then ended; and
- the notes to the financial statements, which include a summary of significant accounting policies.

Basis for opinion

We conducted our audit in accordance with the Law of 23 July 2016 on the audit profession (Law of 23 July 2016) and with International Standards on Auditing (ISAs) as adopted for Luxembourg by the "Commission de Surveillance du Secteur Financier" (CSSF). Our responsibilities under the Law of 23 July 2016 and ISAs as adopted for Luxembourg by the CSSF are further described in the "Responsibilities of the "Réviseur d'entreprises agréé" for the audit of the financial statements" section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

We are independent of the Fund in accordance with the International Code of Ethics for Professional Accountants, including International Independence Standards, issued by the International Ethics Standards Board for Accountants (IESBA Code) as adopted for Luxembourg by the CSSF together with the ethical requirements that are relevant to our audit of the financial statements. We have fulfilled our other ethical responsibilities under those ethical requirements.

Other information

The Board of Directors of the Fund is responsible for the other information. The other information comprises the information stated in the annual report but does not include the financial statements and our audit report thereon.

Our opinion on the financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information identified above and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of the Board of Directors of the Fund for the financial statements

The Board of Directors of the Fund is responsible for the preparation and fair presentation of the financial statements in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements, and for such internal control as the Board of Directors of the Fund determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Board of Directors of the Fund is responsible for assessing the Fund's and each of its sub-funds' ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors of the Fund either intends to liquidate the Fund or close any of its sub-funds or to cease operations, or has no realistic alternative but to do so.

Responsibilities of the "Réviseur d'entreprises agréé" for the audit of the financial statements

The objectives of our audit are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an audit report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF, we exercise professional judgment and maintain professional scepticism throughout the audit. We also:

- identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;

- obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Fund's internal control;

- evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors of the Fund;

- conclude on the appropriateness of the Board of Directors of the Fund's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Fund's or any of its sub-funds' ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our audit report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our audit report. However, future events or conditions may cause the Fund or any of its sub-funds to cease to continue as a going concern;

- evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

1 - General information

Mirova Funds (the "SICAV") is a Luxembourg Société Anonyme qualifying as Société d'Investissement à Capital Variable, composed of several separate sub-funds (each a "Sub-Fund").

The SICAV's investment objective is to provide investors access to a diversified management expertise through a range of several separate sub-funds, each having its own investment objective and policy.

The SICAV was incorporated on 26 August 2009 under the name of "Impact". This name has been changed into "Impact Funds" by an extraordinary general meeting of the SICAV dated 9 September 2009 and further changed into "Mirova Funds" by an extraordinary general meeting of the SICAV dated 24 April 2013.

The SICAV is recorded in the Luxembourg *Registre de Commerce et des Sociétés* under number B 148004.

The SICAV qualifies as a UCITS under Part I of the Luxembourg law of 17 December 2010, as amended from time to time, relating to undertakings for collective investments.

At the date of the report, the following sub-funds are offered to the investors:

- Mirova Global Sustainable Equity Fund
- Mirova US Sustainable Equity Fund (launched on 7 June 2022)
- Mirova Europe Sustainable Equity Fund
- Mirova Euro Sustainable Equity Fund
- Mirova Global Environmental Equity Fund
- Mirova Europe Environmental Equity Fund
- Mirova Future of Food Fund (launched on 15 November 2022)
- Mirova Women Leaders Equity Fund
- Mirova Global Climate Ambition Equity Fund
- Mirova Europe Climate Ambition Equity Fund
- Mirova US Climate Ambition Equity Fund
- Mirova Global Green Bond Fund
- Mirova Euro Green and Sustainable Bond Fund
- Mirova Euro Green and Sustainable Corporate Bond Fund
- Mirova Euro High Yield Sustainable Bond Fund (launched on 20 June 2022)
- Mirova Euro Short Term Sustainable Bond Fund (launched on 20 June 2022)
- Mirova Europe Sustainable Economy Fund

The shares issued at the date of the report are:

- Class EI Shares are appropriate for institutional investors and reserved for the Sub-Fund's early investors and will be closed to new subscriptions and switches upon the occurrence of certain events set at the discretion of the Management Company, such as, but not limited to:
  - the end of a stipulated period of time or
  - a maximum level subscription in the relevant Share Class.

- Class F Shares are available through fee-based investment platforms sponsored by a financial intermediary or other investment programs subject to the prior approval of the Management Company.

- Class G Shares and Class Z are reserved for undertakings for collective investment and segregated accounts for which the Investment Division of the Management Company is acting as portfolio manager.

- Class I Shares, Class SI Shares and Class S1 Shares available only for institutional investors (the "Institutional Investors").

- Class M Shares and Class M1 Shares (reserved for feeder funds or the Management Company Group).

- Class N Shares (available for individuals in certain limited circumstances when investing through Intermediaries).

- Class N1R Shares are appropriate for investors expressly authorised by the Management Company and may typically be appropriate for:
  - discretionary portfolio managers or independent advisers, as defined under MIFID; and/or
  - non-independent or restricted advisers who have agreed not to receive any payments or are not permitted to receive any payments pursuant to regulatory requirements imposed by local regulators.

- Class Q Shares (only investors that meet certain qualifications may purchase Q Shares. The prospectus determines whether investors satisfy those qualifications).

- Class R Shares and Class RE Shares (available for retail investors).

- Class F NPF, Class I NPF, Class N NPF, Class N1 NPF, Class Q NPF, Class R NPF, Class RE NPF, Class SI NPF and Class S1 NPF (Individuals may invest only in class R, RE, F and N Shares, regardless of whether they are investing directly or through a financial advisor).

Other notes to the financial statements

1 - General information

- Class I, Class SI, Class R, Class RE, Class N and Class Q Shares are available as Accumulation Shares and/or Distribution Shares. Class M Shares is available as Distribution Shares (only investors that meet certain qualifications may purchase class I, SI and M Shares. The prospectus determines whether investors satisfy those qualifications).

- Class H-I, Class H-I NPF, Class H-N, Class H-N NPF, Class H-N1 NPF, Class H-R, Class H-R NPF, Class H-RE, Class H-SI, Class H-SI NPF and Class H-S1 NPF Shares and Class H-Q NPF refer to the hedge share classes issued.

2 - Principal accounting policies

2.1 - Presentation of the financial statements

The financial reports of the SICAV are established in accordance with the Luxembourg legal and regulatory requirements concerning Undertakings for Collective Investment.

2.2 - Portfolio valuation

The value of each sub-fund's assets shall be determined as follows:

• Securities and money market instruments traded on exchanges and Regulated Markets are valued at the last closing price unless the SICAV believes that an occurrence after the publication of the last market price and before any sub-fund next calculates its net asset value will materially affect the security's value. In that case, the security may be fair valued at the time the Administrative Agent determines its net asset value by or pursuant to procedures approved by the SICAV.

• Securities and money market instruments not traded on a Regulated Market (other than short-term money market instruments) are based upon valuations provided by pricing vendors, which valuations are determined based on normal, institutional-size trading of such securities using market information, transactions for comparable securities and various relationships between securities which are generally recognized by institutional traders.

• Short-term money market instruments (remaining maturity of less than 90 calendar days or less) are valued with the principle of amortized cost (which approximates market value under normal conditions).

• Units or shares of open-ended funds are valued at the last published net asset value.

• All other assets - fair market value as determined pursuant to procedures approved by the Board of Directors of the SICAV.

• The SICAV also may value securities at fair value or estimate their value pursuant to procedures approved by the SICAV in other circumstances such as when extraordinary events occur after the publication of the last market price but prior to the time the Sub-Funds' net asset value is calculated.

• In the event that the latest available closing price does not, in the opinion of the Board of Directors, reflect the fair market value of the relevant securities, the value of such securities is defined by the Board of Directors based on the reasonably foreseeable sale proceeds determined prudently and in good faith.

• Securities not listed or traded on a stock exchange or not dealt in on another regulated market are valued on the basis of the probable sale proceeds determined prudently and in good faith by the board of Directors of the SICAV.

2.3 - Net realised profits or losses on sales of investments

The cost of securities sold is calculated on the basis of the average cost.
Exchange profit and losses resulting from sale of investments are presented in the Statement of operations and changes in net assets in the account "Net realised profit/(loss) on sales of investment securities".

The unrealised net appreciation or depreciation is disclosed in the Statement of net assets. The movement in net unrealised appreciation/depreciation and the net realised gain/loss are allocated to the statement of operations and changes in net assets.

Other notes to the financial statements

2 - Principal accounting policies

2.4 - Foreign currency translation

Transactions of a sub-fund expressed in currencies other than the sub-fund's reporting currency are recorded on the basis of the exchange rates prevailing on the date they occur. At the time of closing the books, resulting assets and liabilities are translated into the sub-fund's reporting currency on the basis of the exchange rates prevailing on that date. Realised profit/(loss) resulting from foreign exchange translation is included in the statement of operations and changes in net assets under “Net realised profit/loss on foreign exchange”.

As at 31 December 2022, the following exchange rates were used:

1 EUR	=	1.57375	AUD	1 EUR	=	5.6348	BRL	1 EUR	=	1.44605	CAD
1 EUR	=	0.98745	CHF	1 EUR	=	24.154	CZK	1 EUR	=	7.43645	DKK
1 EUR	=	0.88725	GBP	1 EUR	=	8.32985	HKD	1 EUR	=	140.8183	JPY
1 EUR	=	1,349.5376	KRW	1 EUR	=	20.7978	MXN	1 EUR	=	10.5135	NOK
1 EUR	=	1.6875	NZD	1 EUR	=	11.12025	SEK	1 EUR	=	1.4314	SGD
1 EUR	=	1.06725	USD								

2.5 - Combined financial statements

The various positions of the combined financial statements of the SICAV are equal to the sum of the various corresponding positions in the financial statements of each Sub-Fund and are expressed in euros (EUR). Bank accounts, other net assets/(liabilities), the value of the portfolio securities, the income and fees that are expressed in a currency other than EUR were converted to EUR at the exchange rates prevailing on December 31, 2022.

As at December 31, 2022, the total of cross-investments within sub-fund investments amounts to EUR 77,460,047.33. The total combined NAV at year-end without cross-investments amounts to EUR 10,694,188,759.55.

As at December 31, 2022, the cross-investments within the SICAV are as follow:

Sub-funds	Cross investment	Amount (in EUR)
Mirova Funds - Mirova Europe Sustainable Equity Fund	Mirova Euro Short Term Sust Bd EUR I Cap	5,504,179.45

2.6 - Valuation of forward foreign exchange contracts

Forward foreign exchange contracts remaining open at the closing date are valued at the closing date by reference to the forward foreign exchange rate applicable to the outstanding life of the contract. The unrealised appreciation or depreciation on forward foreign exchange contracts is disclosed in the Statement of net assets. For the details of outstanding forward foreign exchange contracts, please refer to the section “Schedule of derivative instruments”.

Realised profit/(loss) and change in unrealised appreciation/depreciation resulting there from are included in the Statement of operations and changes in net assets respectively under “Net realised profit/(loss) on forward foreign exchange contracts” and “Movement in net unrealised appreciation/depreciation on forward foreign exchange contracts”.

Other notes to the financial statements

2 - Principal accounting policies

2.7 - Valuation of futures contracts

Financial futures contracts remaining open at the closing date are valued at their last known price on the date of valuation. The unrealised appreciation or depreciation on financial futures contracts is disclosed in the Statement of net assets.

For the details of outstanding financial futures contracts, please refer to the section “Schedule of derivative instruments”.

Realised profit/(loss) and change in unrealised appreciation/depreciation resulting there from are included in the Statement of operations and changes in net assets respectively under “Net realised profit/(loss) on financial futures contracts” and “Movement in net unrealised appreciation/depreciation on financial futures contracts”.

2.8 - Repurchase agreements / Reverse repurchase agreements

All revenues deriving from Sub-Funds repurchase and reverse repurchase agreements are, after operational costs, for the benefit of the relevant Sub-Fund.

The repurchase agreement may be entered into with Natixis Tradex Solutions, a company belonging to the Management Company's group. With respect to these activities, Natixis Tradex Solutions receive a fee equal to 40% (corresponding to the operational costs as referred to in the previous paragraph) excluding taxes of the income generated by these repurchase agreement, which amount is specified in the Annual Report of the SICAV and in note 8.

In certain cases, transactions may be concluded with market counterparties and intermediated by Natixis Tradex Solutions.

2.9 - Dividend and interest income

Dividend income is accounted for on an ex-dividend basis, net of withholding tax. Interest income is recognised on an accrual basis.

2.10 - Income generated by securities lending

All revenues deriving from Sub-Funds lendings are, after operational costs, for the benefit of the relevant Sub-Fund.

The securities lendings agreement may be entered into with Natixis Tradex Solutions, a company belonging to the Management Company's group. With respect to these activities, Natixis Tradex Solutions receive a fee equal to 40% (corresponding to the operational costs as referred to in the previous paragraph) excluding taxes of the income generated by these securities lendings agreement, which amount is specified in the Annual Report of the SICAV and in note 7.

In certain cases, transactions may be concluded with market counterparties and intermediated by Natixis Tradex Solutions.

2.11 - Transaction fees

The transaction fees, i.e. fees charged by the brokers and the custodian for securities and derivatives transactions are recorded separately in the Statement of operations and changes in net assets in the account “Transaction fees”.

2.12 - Abbreviations used in securities portfolios

A: Annual
Q: Quarterly
S: Semi-annual
M: Monthly
FL.R : Floating Rate Notes
XX: Perpetual Bonds

3 - Determination of net asset value

The net asset value of each Share of any one class on any day that any sub-fund calculates its net asset value is determined by dividing the value of the portion of assets attributable to that class less the portion of liabilities attributable to that class, by the total number of Shares of that class outstanding on such day. The net asset value of each Share shall be determined in the currency of quotation of the relevant class of shares.

For any class in which the only difference from the class denominated in the Sub-Fund’s Reference Currency is the currency of quotation, the net asset value per Share of that class shall be the net asset value per Share of the class denominated in the reference currency multiplied by the exchange rate between the Reference Currency and the currency of quotation at the WMR rates (4.00 pm in London).

If such quotations are not available, the rate of exchange will be determined in good faith by or under procedures established by the SICAV.

The net asset value of each class of Share may be rounded to the nearest 1/100 of the currency of the relevant class in accordance with the SICAV’s guidelines.

Other notes to the financial statements

4 - Management and administration fees

The rates applicable as at December 31, 2022 are as follows:

The amount to be incurred annually by each sub-fund including the remuneration to the Management Company and the Administration fee is:

	Management Fee	Administration Fee	All-In fee

“Management fees” above include the aggregate amount of Management Company fees, Investment Managers fees, Distributors fees, registration fees and expenses specific to a Sub-Fund or share class.

“Administration fees” above include the total amount of the fees due the Custodian, the Administrative Agent, Paying Agent, Domiciliary and Corporate Agent and Registrar and Transfer Agent, the costs relating to the translation and printing of key investor information documents, the Prospectus and reports to Shareholders, Auditors, outside counsels and other professionals, administrative expenses, such as insurance coverage.

The “All-in-Fee” above is defined as the aggregate of Management Fees and Administration Fees charged annually and paid annually by each Sub-Fund, other than taxes (such as "Taxe d'abonnement") and expenses relating to the creation or liquidation of any Sub-Fund or Share Class. The “All-in-Fee” shall not exceed such percentage of each Sub-Fund’s average daily net asset value.

If the yearly actual expenses paid by any Sub-Fund exceed the applicable “All-in-Fee”, the Management Company will support the difference and the corresponding income will be recorded under “Other incomes” caption.

If the yearly actual expenses paid by each Sub-Fund are lower than the applicable “All-in-Fee”, the Management Company will keep the difference and the corresponding charge will be recorded under “Other expenses” caption at December 31, 2022.

Other notes to the financial statements

5 - Performance fees

The Management Company is entitled to receive from the below-stated sub-funds a performance fee calculated and accrued at each valuation day in respect of each class of share and payable annually in arrears.

The performance fee is based on a comparison of the Valued Asset and the Reference Asset and applies to all existing share classes of the concerned sub-funds, except for the M/D (EUR) share class and all the NFP share classes.

The Valued Asset is defined as the portion of the net assets corresponding to a particular class of share, valued in accordance with the rules applicable to the assets and taking into account the All-in-Fee corresponding to the said share class.

The Reference Asset corresponds to the portion of the net assets related to a particular share class, adjusted to take into account the subscription/redemption amounts applicable to the said share class at each valuation, and valued in accordance with the performance of the Reference Rate of the said share class.

Sub-funds	Observation period	Reference rate
Mirova Global Sustainable Equity Fund	From 01/01/22 to 31/12/22	20% of the performance above the reference index MSCI World Net Dividends Reinvested in EUR
Mirova US Sustainable Equity Fund	From 07/06/22 to 31/12/22	20% of the performance above the reference index S&P 500 Net Dividends Reinvested USD
Mirova Europe Sustainable Equity Fund	From 01/01/22 to 31/12/22	20% of the performance above the reference index MSCI Europe Net Dividend Reinvested in EUR 20% of the performance above the reference index MSCI Europe Net Dividend Reinvested in GBP for class I/A (GBP)
Mirova Euro Sustainable Equity Fund	From 01/01/22 to 31/12/22	20% of the performance above the reference index MSCI EMU Net Dividends Reinvested in EUR
Mirova Global Environmental Equity Fund	From 01/01/22 to 31/12/22	20% of the performance above the reference index MSCI World Net Dividends Reinvested in EUR
Mirova Europe Environmental Equity Fund	From 01/01/22 to 31/12/22	20% compared to the MSCI Europe Net Dividend Reinvested in EUR. The performance of each Share Class is compared to the Reference Index in the respective Share Class currency. However, performance of each hedged Share Class is compared to the performance of the Reference Index in the Share Class Hedging currency.
Mirova Women Leaders Equity Fund	From 01/01/22 to 31/12/22	20% of the performance above the reference index MSCI World Net Dividends Reinvested in EUR
Mirova Euro High Yield Sustainable Bond Fund	From 20/06/22 to 31/12/22	20% of the performance above the reference index ICE BofA Merrill Lynch Euro High Yield BB-B
Mirova Europe Sustainable Economy Fund	From 01/01/22 to 31/12/22	20% of the performance above the reference index 50% MSCI Europe Net Dividend Reinvested in EUR and 50% Bloomberg Euro Aggregate Corporate Index. The performance of each Share Class is compared to the Reference Index in the respective Share Class currency. However, performance of each hedged Share Class is compared to the performance of the Reference Index in the Share Class Hedging currency.

If, over the Observation Period, the Valued Asset of the Sub-Fund is higher than the Reference Asset defined above, the actual performance fee will be accrued with the applicable percentage of performance fee, as set out in each Sub-Fund's description under "Characteristics" in the prospectus, (inc. tax) applied on the difference between these two assets. The performance fee is calculated and accrued on each Valuation Day.

If, over the Observation Period, the Valued Asset of the Sub-Fund is lower than the Reference Asset, the performance fees will be zero.

The Observation Period of the Sub-Funds is defined as follow:

- First Observation Period: from the first Valuation day of each Share Class to the last Valuation day of December (with a minimum period of twelve months).
- Thereafter: from the first Valuation day of January to the last Valuation day of December of the following year

Any underperformance of the Valued Asset of the Sub-Fund compared to the Reference Asset at the end of the relevant Observation Period should be clawed back before any performance fee becomes payable over years on a rolling basis, i.e. the Management Company should look back at the past 5 years for the purpose of compensating underperformances.

A reset will be implemented if:
(i) an underperformance is not compensated and no longer relevant as this successive period of five years has elapsed,
(ii) a performance fee is paid at any time during this successive period of five years.

In case the Valued Asset of the Sub-Fund has overperformed the Reference Asset on the last Valuation Day of the Observation Period, the Management Company should be able to crystallise the accrued performance fee over the Observation Period (subject to any clawback as indicated above). Such crystallized performance fee shall be payable within three months to the Management Company.

In case of redemption and/or closure/merger of the relevant Sub-Fund, the due share of performance fee portion corresponding to the number of shares which have been redeemed is definitely payable to the Management Company within three months as from the relevant Observation Period.

Other notes to the financial statements

5 - Performance fees

In application of the ESMA Guidelines on performance fees (ESMA34-39-992) and Circular CSSF 20/764, the table below displays the actual amount of performance fees charged by each relevant Share Class and the percentage of these fees based on the Share Class Net Asset Value ("NAV"). Only the Share Classes for which performance fees have been charged are shown below:

Sub-funds	Share Class	ISIN Code	Sub-fund ccy	Amount of performance fees and crystal perf fees as at 31/12/22 (in Sub-fund currency)	Average NAV of the Share Class (in Sub-fund currency)	% in the Share Class average NAV
Mirova Global Sustainable Equity Fund	Class I/A (EUR) - Cap	LU0914729453	EUR	2.81	237,564,180.74	0.00
Mirova US Sustainable Equity Fund	Class I/A (USD) - Cap	LU2382250863	USD	12.90	2,829.45	0.46
	Class R/A (USD) - Cap	LU2382249691	USD	9.52	2,822.12	0.34
Mirova Europe Sustainable Equity Fund	Class I/A (EUR) - Cap	LU0552643099	EUR	2.45	9,752,966.21	0.00
	Class N/A (EUR) - Cap	LU0914731517	EUR	24.42	137,859,485.81	0.00
	Class R/A (EUR) - Cap	LU0552643339	EUR	15.43	3,430,466.96	0.00
Global Environmental Equity Fund	Class R/A (EUR) - Cap	LU2193677676	EUR	1,526.96	2,730,683.36	0.06
Mirova Women Leaders Equity Fund	Class R/A (USD) - Cap	LU2102406167	EUR	0.17	987.03	0.02
				1,594.66		

The performance amounts of the above-table are those accrued from 1 January 2022 to 31 December 2022.

6 - Subscription tax *("Taxe d'abonnement")*

The SICAV is registered in Luxembourg and as a result, is exempt from tax except for the "taxe d'abonnement". Under current legislation, Category of Shares reserved to institutional investors (class I Shares, class M Shares, class Q Shares and class SI Shares) are subject to a tax rate of 0.01%, those reserved to retail investors (class F Shares, class R Shares, class RE Shares and N Shares) are subject to a tax rate of 0.05%. The tax is calculated and payable quarterly on the net assets of the SICAV at the end of the relevant quarter.

Other notes to the financial statements

7 - Securities lending

As at year-end, the market value of the securities on loan open with Natixis Tradex Solutions, France is as follows:

10 - Swing pricing

Subscriptions and redemptions can potentially have a dilutive effect on the Sub-Funds' Net Assets Values per share and be detrimental to long term investors as a result of the costs, bid-offer spreads or other losses that are incurred by the SICAV in relation to the trades undertaken by the Management Company. In order to protect the interest of existing shareholders, the Management Company may decide to introduce a Swing Pricing mechanism for any Sub-Fund.

If, for the Sub-Funds listed below, net subscriptions or net redemptions on any calculation day exceeds a certain threshold ("the Swing Threshold"), the net asset value per share will be adjusted respectively upwards or downwards by a Swing Factor. Swing Thresholds and Swing Factors are determined and reviewed on a periodic basis by the Management Company.

The Swing Factor will be set by the Management Company to reflect estimated dealing and other costs, and may not exceed 2% of the net asset value.

The volatility of the Sub Funds' net asset values may not reflect the true portfolio performance, and therefore might deviate from the Sub-Funds' benchmark as a consequence of the application of the Swing Pricing mechanism. Performance fees, if any, are calculated on the basis of the net asset value before the application of Swing Pricing adjustments.

The Swing Pricing Mechanism may be applied to the following Sub-Funds:
- Mirova Global Green Bond Fund;
- Mirova Euro Green and Sustainable Bond Fund;
- Mirova Euro Green and Sustainable Corporate Bond Fund;
- Mirova Euro High Yield Sustainable Bond Fund;
- Mirova Euro Short Term Sustainable Bond Fund.

At the date of the report, no Swing Pricing was applied to the Net Assets Values of the Sub-Funds of the SICAV.

Remuneration policy

MIROVA

Mirova's Remuneration Policy is established in accordance with the AIFM Directive 2011/61/EU, the UCITS Directive 5 2014/91/EU, the MiFID II Directive 2014/65/EU, the Sustainable Finance Disclosure Regulation (SFDR) 2019/2088/EU on the publication of sustainability-related information in the financial services sector, the AMF (French Financial Markets Authority) Position 2013-11 "Remuneration Policy for Alternative Investment Fund Managers," as well as the Reference Texts of the Monetary and Financial Code and the Financial Markets Authority.

1. General Principles

The remuneration policy is a strategic element of Mirova's policy. As a tool for mobilizing and engaging employees, it ensures to be competitive and attractive in the light of market practices and within the framework of strict compliance with major financial balances and regulations.

Mirova's remuneration policy, which applies to all employees, incorporates the alignment of the interests of employees with those of investors in its fundamental principles:

- It is consistent and promotes sound and effective risk management and does not encourage risk-taking that would be incompatible with risk profiles, regulations or documents constituting managed products.
- It is consistent with the business strategy, objectives, values and interests of the management company and the products it manages and those of investors and includes measures to avoid conflicts of interest.

The remuneration policy includes all components of remuneration encompassing fixed remuneration and, if applicable, variable remuneration.

Fixed remuneration rewards skills, work experience and level of responsibility, taking into account market conditions.

Variable remuneration is based on the assessment of collective performance measured at both at the level of the management company and managed products, and by reference to individual performance. It takes into account quantitative and qualitative elements, which can be established on an annual or multi-year basis.

The objective and transparent assessment of annual and multi-year performance based on pre-defined objectives is the prerequisite for the implementation of Mirova's remuneration policy. It ensures fair and individualized treatment of employees. This assessment is shared between the employee and his or her manager during the annual performance review.

The contribution and level of performance of each employee are assessed in terms of his or her duties, assignments and level of responsibility within the management company.

Finally, the specific minimum criteria incorporating sustainability risks, i.e. social, environmental and governance issues, must be defined for all employees of management teams.

For each category of staff, all quantitative and qualitative objectives are defined and communicated individually at the beginning of the year, in line with Mirova's strategic objectives.

2. Remuneration Components

The remuneration policy ensures that a balanced proportion between fixed and variable remuneration is maintained, and the human resources department is responsible for this. The reassessment of fixed remuneration and the allocation of variable remuneration are studied once a year as part of the career promotion campaign.

a. Fixed Remuneration

Fixed remuneration rewards the skills and expertise expected in a function.

The positioning of fixed remuneration is studied periodically to ensure that it is in line with geographical and professional market practices.
Fixed remuneration level is reviewed once a year as part of the annual remuneration review. Outside of this period, increases are only awarded in the event of promotion, professional mobility or exceptional individual situation.

b. Variable Remuneration

Variable remuneration packages are defined according to Mirova annual results, but also on the basis of qualitative factors, such as competing companies' practices, the general market conditions in which the results were obtained, and factors that may have temporarily affected the performance of the business line.

Variable remuneration can be awarded where appropriate, for annual, collective and/or individual performance.

Mirova collective variable remuneration consists of an incentive and profit-sharing schemes combined with a corporate savings plan ("PEE") and a collective retirement savings plan (PERCOL). Under these plans, employees can benefit from a matching contributions scheme. These collective variable remunerations have no incentive effect on the risk management of Mirova and/or managed products, and do not fall within the scope of the AIFM or UCITS V directives.

Additional unaudited information

Remuneration policy

In accordance with the overall variable remuneration packages, individual variable remuneration is awarded as part of the annual remuneration review in an objective discretionary manner, in relation to the individual performance assessment and how such performance is achieved.

The identified staff is subject to the specific obligations in respect of risk and compliance rules. Failure to comply with these obligations may result in a partial or total reduction in the allocation of individual variable remuneration.

For the unregulated staff, the remuneration is paid entirely in cash, it is allocated on a discretionary basis, and varies from one year to another depending on the assessment of performance criteria. The variable remuneration allocated to employees is impacted by the taking of a non-compliant level of risk or failure to comply with internal procedures over the year under review.

In the event of a significant loss or decrease in its profits, Mirova may also decide to reduce or even fully cancel the envelope allocated to individual variable remuneration, as well as, if necessary, the maturities in the process of acquisition for variable remuneration already allocated and deferred.

Similarly, if a major sustainability risk is realized, i.e., the occurrence of an environmental, social or governance event or situation that would have a significant and lasting negative impact on the value of funds/managed products, the envelope allocated to individual variable remuneration, as well as, if necessary, the maturities in the process of acquisition for variable remuneration already allocated and deferred, may be reduced or cancelled.

There is no contractual guarantee for variable remuneration.

c. Key Employee Retention Scheme

Mirova wishes to be able to guarantee its investors the stability of key employees through a retention system integrated into the remuneration policy, which makes it possible to allocate an additional amount of variable remuneration in the form of cash indexed to the performance of a set of products managed by Mirova and acquired in equal instalments over a period of at least three years. Thus, it allows to associate employees with the evolution of the results, subject to conditions of employees' attendance. The amounts are allocated in terms of performance evaluation and individual professional commitment over a given year. The envelope allocated to the retention scheme is contained in the overall budget allocated to variable remuneration.

d. Carried Interest

The carried interest represents the loyalty and alignment of the interests of the investors and employees concerned through a deferred payment. It is achieved by acquiring shares of the fund in order to take a minimum personal financial risk in relation to the size of the fund for the employees concerned. The remuneration of the acquired shares is then conditional on the creation of capital gains and a minimum positive return on the ordinary shares of the fund's investors. It is reserved for the employees who make up the investment team of the infrastructure fund activities.

3. Evaluation of Collective and Individual Performance

The contribution and the performance level of employees are assessed in relation to their duties, missions and level of responsibility in the company. There are several different categories of staff distinguished as follows:

- The Executive Committee is evaluated on its contribution to the definition and implementation of the company's strategy, and on its ability to develop performance of product and service offerings and financial results. Performance is assessed annually.
- The support and business development functions are assessed on their ability to achieve qualitative and quantitative objectives for business development functions. These quantitative targets are defined and communicated at the beginning of each year.
- The control functions, whose evaluation is based on the assessment of qualitative criteria defined annually, so as not to compromise their independence or create conflicts of interest.
- The management functions are evaluated differently, depending on the type of portfolio managed. The applied quantitative criteria reflect the development of management performance sought by investors, but do not allow excessive risk-taking that may affect Mirova's profile of risk and/or managed products.

4. Adaptation of the System Applicable to the Regulated Staff

a. Identification of the Regulated Staff

In accordance with regulatory provisions, at the beginning of the year, HRD and RCCI identify and formalize the list of the "regulated" staff corresponding to employees who, individually, may have a significant impact through their decisions on Mirova's risk profile and/or managed products. Members of the Executive Committee, the management functions of the support activities, the supervisory management functions (risks, compliance and control), the staff responsible for portfolio management, other risk takers, as well as employees who, in view of their overall remuneration, are in the same pay bracket as the general management and the risk takers, are systematically included in this staff.

The identification of the management and risk functions included in the scope of regulated functions is carried out annually by HRD and RCCI - responsible for compliance, internal control and risk on the basis of the mapping of management processes. Senior management validates the scope of the entire regulated staff.

b. Scheme Applicable to Variable Remuneration Allocated to the Regulated Staff

Variable remuneration and, where appropriate, the loyalty scheme of the regulated staff are allocated globally, half in cash and the other half in the form of a financial instrument equivalent. For the lowest variable remuneration, below an annually defined threshold, the deferred proportion does

Additional unaudited information

Remuneration policy

not apply. The list of employees concerned is validated by the RCCI - Director of Compliance, Internal Control and Risk. For the highest Mirova salaries, the deferred proportion in the form of a financial instrument equivalent can reach 60%.

The proportion of variable remuneration, which is deferred over 3 years, increases with the amount of variable remuneration allocated, and can reach 60% for the highest remuneration at Mirova.

The thresholds for triggering deferred variable remuneration are likely to change according to regulations or modifications in internal policies. In this case, the new thresholds are subject to the approval by the Executive Committee of Mirova and the Compensation Committee of Natixis.
In addition, a minimum of 50% of the variable remuneration is paid in financial instruments in the form of cash indexed to the performance of a set of products managed by Mirova.

The acquisition of the deferred portion of the variable remuneration is subject to conditions of presence, financial performance of the management company, relative performance of managed products in relation to benchmark market indices and the absence of any unusual behavior that may have an impact on Mirova's level of risk and/or managed products.

This acquisition is also subject to obligations in terms of compliance with risk and compliance rules. Failure to comply with these obligations may result in a partial or total decrease in the acquisition. Finally, it can be returned in whole or in part, in order to ensure a subsequent adjustment of the risks.

Employees benefiting from deferred variable remuneration are prohibited from using individual hedging or insurance strategies over the entire acquisition period.

The terms and conditions for determining, valuing, awarding, acquiring and paying deferred variable remuneration in financial instrument equivalent are detailed in Mirova Long Term Incentive Plan (LTIP).

c. Control System

At the end of each promotion campaign and before allocation of variable remuneration, the HRD formalizes a review of the adequacy and effectiveness of the remuneration policy for the regulated staff (the list of names, the amounts allocated, the distribution between immediate and deferred payments, and the cash and equivalent financial instrument). It is approved by the Executive Committee and Natixis Investment Managers.

The general and specific principles, application procedures and quantitative summary data for the remuneration policy including the regulated staff, as well as the annual remuneration envelope for directors, are provided to Mirova Board of Directors annually. As part of the promotion campaigns, individual proposals are validated by the human resources management and the Executive Management of Mirova, and then successively through the remuneration validation bodies of Natixis Investment Managers AM and Natixis. The CEO's remuneration is determined by the Executive Management of Natixis Investment Managers and Natixis and is presented to Natixis Appointments and Remuneration Committee.

Remuneration paid during the last financial year

The total amount of remuneration for the financial year, broken down into fixed and variable remuneration, paid by the management company to its staff and the number of beneficiaries, and where appropriate, carried interest paid by the portfolios, is as follows:

- Fixed remuneration: €12,317,024
- Variable remuneration awarded: €9,876,450
- Employees concerned: 132 employees

The aggregate amount of remuneration, divided among senior executives and employees of the management company whose activities have a significant impact on the risk profile of the management company and/or the portfolios:

- Total remuneration: €15,030,540 of which:
    - Executive managers: €4,635,800
    - Members of staff: €10,394,740

Additional unaudited information

Remuneration policy

NATIXIS INVESTMENT MANAGERS INTERNATIONAL (NIMI)

This NIMI remuneration policy consists of general principles applicable to all employees (see point I), specific principles applicable to employees identified by AIFM and UCITS V (see point II) and a governance mechanism applicable to all employees (see point III).

It falls within the framework of the remuneration policy defined by Natixis and is established in compliance with the provisions relating to remuneration stipulated in the following regulatory texts, as well as the guidelines of the European Securities and Markets Authority (ESMA) and the positions of the Autorité des Marchés Financiers (AMF, the French Financial Markets Authority) resulting therefrom:

- Directive 2011/61/EU of the European Parliament and of the Council of 8 June 2011 on Alternative Investment Fund Managers, transposed into the French Monetary and Financial Code by Order No. 2013-676 of 27 July 2013 (AIFM Directive)
- Directive 2014/91/EU of the European Parliament and of the Council of 23 July 2014 on undertakings for collective investment in transferable securities, transposed into the French Monetary and Financial Code by Order No. 2016-312 of 17 March 2016 (UCITS V Directive).
- Directive 2014/65/EU of the European Parliament and of the Council of 15 May 2014 on markets in financial instruments, transposed into the Monetary and Financial Code by Order No. 2016-827 of 23 June 2016, supplemented by the Delegated Regulation 2017/565/EU of 25 April 2016 (MiFID II Directive).
- Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the Financial Services sector

I. GENERAL PRINCIPLES OF THE REMUNERATION POLICY

The remuneration policy is a strategic aspect of the NIMI policy. As a tool to enhance employee motivation and commitment, it aims to be competitive and attractive in relation to the rest of the industry while fully complying with key financial indicators and regulations.

NIMI's remuneration policy, which applies to all employees, counts the alignment of employees' interests with those of investors among its fundamental principles:

- It is consistent and promotes sound and efficient risk management and does not encourage risk-taking that would be incompatible with the risk profiles, regulations or documents constituting the products managed.
- It is in line with the economic strategy, objectives, values and interests of the Management Company and the products it manages, as well as those of investors, and includes measures aimed at preventing conflicts of interest.

The remuneration policy covers all components of remuneration, which include fixed remuneration and, where applicable, variable remuneration.

Fixed remuneration rewards skills, professional experience and level of responsibility. It takes into account market conditions.

Variable remuneration depends on the assessment of collective performance – which is measured on the basis of Management Company performance and the performance of the products managed – and individual performance. It considers quantitative and qualitative elements, which may be established on an annual or multi-year basis.

I-1. Definition of performance

The objective and transparent assessment of annual and multi-year performance based on predefined objectives is a prerequisite for applying the NIMI remuneration policy. It ensures the fair and selective treatment of employees. This assessment is shared between the employee and their manager during an individual appraisal interview.

The contribution and performance level of each employee are evaluated with regard to their duties, assignments and level of responsibility in the Management Company. In this context, the remuneration policy distinguishes several categories of staff:

- The Management Committee is assessed on its contribution to the definition and implementation of the Management Company's strategy, this strategy being part of that of the international distribution platform and that of Dynamic Solutions. The Management Committee is also assessed on its ability to expand the performance of product and service offerings, on the performance of the distribution activity and, more generally, on the development of the group's multi-boutique model, as well as on the risk-adjusted financial performance within its scope of supervision. For this category, performance is assessed annually through quantitative indicators linked to changes in NIMI's financial results and supervised activities, as well as a contribution to the overall performance of Natixis IM. Performance is also assessed through the achievement of qualitative objectives, such as the quality of management and/or responsibility for/contribution to cross-functional projects.

Additional unaudited information

Remuneration policy

- Support functions are assessed on their ability to proactively support the strategic challenges of the Management Company. Individual performance is assessed annually through the achievement of qualitative objectives, such as the quality of recurring activities and/or the degree of participation in cross-functional projects or strategic/regulatory plans. These objectives are defined annually in accordance with those of NIMI, those of the international distribution platform and, where applicable, those of Dynamic Solutions.

- Assessment of the performance of control functions is based on the evaluation of qualitative criteria only, such as participation in cross-functional projects or in strategic/regulatory plans, defined annually, to avoid compromising their independence or creating conflicts of interest with the activities they control.

- The performance of management functions is assessed according to a quantitative criterion linked to the generation of value through allocation, supplemented by qualitative criteria.

This quantitative criterion reflects the aim of achieving the management performance sought by investors without causing excessive risk-taking, which may have an impact on the risk profile of NIMI and the products managed.

These quantitative criteria are calculated over a predefined period in line with the risk-adjusted performance horizon of the funds managed and of the Management Company.

Specific criteria incorporating risks related to sustainability, i.e. environmental, social and governance issues, must be defined for all management team employees.

- Assessment of the performance of real asset private debt management functions is based on two criteria (one quantitative, one qualitative), which if successfully met means that the interests of the Management Company and investor clients are both being served by the funds and strategies managed by the team.

The quantitative criterion measures the amount of funds raised from investors and reflects each manager's involvement in the development of assets under management, which generate income for the business activity. The qualitative criterion is designed to ensure that investments made on behalf of clients have been made according to the strict application of the investment criteria defined with them. It also aims to ensure that the manager has performed an exhaustive and early analysis of the risk factors expected during the investment and throughout the entire holding period. In the event that any risk factor occurs, the relevance of the corrective measures, which are to be carried out diligently and in the sole interest of the investor, will be taken into account. In other words, this criterion does not penalise the manager for the occurrence of a credit event (credit risk is in fact inherent in this business activity). It aims to guarantee clients that an exhaustive analysis of the risks and their mitigation factors has been carried out ab initio, followed by a control process conducted for the duration of the holding period. This enables a well-considered and effective response in the event of a credit event in order to neutralise or limit the impact for investors.

- Assessment of the performance of the distribution functions is based on the evaluation of quantitative and qualitative criteria. The quantitative criteria are based on gross inflows, net inflows, turnover, the profitability of assets under management and how these change. The qualitative criteria include the diversification and development of the business (new clients, new affiliates, new expertise, etc.) and the joint consideration of the interests of NIMI and those of clients.

For all categories of staff, the performance assessment incorporates qualitative criteria.

These qualitative criteria always include compliance with the regulations and NIMI's internal procedures in terms of risk management and compliance.

They may also include the quality of the relationship with clients, including the level of expertise and advice provided, improving the reliability of a process, participating in a cross-disciplinary project, participating in the development of new expertise, contributing to the development of operational efficiencies or any other aspects defined by the strategic objectives set out by NIMI.

For each category of staff, all quantitative and qualitative objectives are defined and communicated individually at the start of the year, in line with NIMI's strategic objectives.

I-2. Remuneration components

I-2.1. Fixed remuneration

NIMI strives to maintain a level of fixed remuneration that sufficiently remunerates employees for their professional activity.

Fixed remuneration rewards the skills, professional experience and level of responsibility expected of an employee when performing their duties.

The positioning of fixed remuneration is reviewed periodically to ensure its consistency with regard to geographical and professional market practices.

Fixed salaries are reviewed once a year as part of the annual remuneration review. Outside that period, only promotions, internal job moves or exceptional changes to individual circumstances may lead to a review.
I-2.2. Variable remuneration

The variable remuneration packages are defined based on the annual results of NIMI, the international distribution platform and Dynamic Solutions, and also by reference to qualitative elements, such as the practices of competitor companies, the general market conditions applicable at the time the results were obtained and any factors that may have temporarily influenced the business line's performance.

Additional unaudited information

Remuneration policy

Variable remuneration, where awarded, is paid to reward an individual annual performance achieved as part of a collective performance.

NIMI's collective variable remuneration consists of mandatory and optional profit-sharing and incentive schemes, together with a company savings plan (plan d'épargne d'entreprise, PEE) and a company collective retirement savings plan (plan d'épargne pour la retraite collectif, PERCO). Employees can benefit from a matching scheme under these plans.

This collective variable remuneration has no incentive impact on the risk management of NIMI and/or the managed products and does not fall within the scope of the AIFM or UCITS V directives.

In compliance with the overall variable remuneration packages, individual variable remuneration is allocated as part of the annual remuneration review in an objective discretionary manner with regard to the assessment of individual performance and the way in which performance is achieved. Variable remuneration awarded to employees is affected by inappropriate risk and compliance management or non-compliance with regulations and internal procedures over the year considered (see I-1. above).

Identified employees are subject to specific obligations in terms of adherence to the rules on risks and compliance. A breach of these obligations may result in the partial reduction or removal of the individual variable remuneration awarded.

In the event of a loss or a significant fall in its profits, NIMI may also decide to reduce or entirely cancel the amount allocated to individual variable remuneration, together with any deferred instalments of variable remuneration previously awarded and in the process of vesting.

Similarly, in the event that a major sustainability-related risk materialises, i.e. an ESG event or situation occurs that would have a material and lasting adverse impact on the value of the funds/products under management, the package allocated to individual variable remuneration may be reduced or even cancelled, as may the maturities in the process of vesting and related to the variable remuneration already awarded and deferred, if applicable.

There are no contractual guarantees for variable remuneration, with the occasional exception of variable remuneration awarded for the first year of work within the framework of external recruitment.

"Golden parachute" agreements are forbidden. Payments related to the early termination of an employment contract are defined in accordance with legal provisions (legal and contractual indemnities) and the performance of the beneficiary, the area of the business to which they belong and the performance of the entire Management Company over the period. They are designed to avoid rewarding failure.

Variable remuneration is not paid through instruments or methods that facilitate circumvention of the requirements established in the regulations.

I-2.3. Key employee retention scheme

NIMI wants to ensure that its investors have confidence in the stability of its teams.

In order to achieve this, a deferred remuneration system has been incorporated into its remuneration policies.

Beyond a certain variable threshold, this scheme leads to the allocation of a proportion of the variable remuneration in the form of a cash payment indexed to changes in the consolidated financial performance of Natixis IM measured by its earnings before tax (EBT), recorded each year over a minimum period of three years. The proportion of variable remuneration thus deferred is vested in equal tranches for a period of at least three years and gives employees a stake in the performance of Natixis IM. The deferred variable remuneration rate is calculated by applying a deferred remuneration table.

This scheme is subject to the employee meeting conditions relating to continued employment and the absence of conduct inconsistent with the company's standards that may have an impact on NIMI's level of risk. Vesting of these tranches may be subject to a repayment commitment, either in full or in part, in order to ensure ex-post risk adjustment.

I-2.4. Balance between fixed and variable remuneration

NIMI ensures that there is an appropriate balance between the fixed and variable components of overall remuneration and that the fixed component represents a sufficiently high proportion of overall remuneration so that a fully flexible policy can be exercised with regard to variable components of remuneration, including the option of not paying a variable component. All individual situations for which variable remuneration represents more than 100% of fixed remuneration and that can be explained by market practice and/or an exceptional level of responsibility, performance and behaviour, are documented by the Human Resources Department as part of the annual remuneration review.

II- IMPLEMENTATION OF THE SCHEME APPLICABLE TO EMPLOYEES IDENTIFIED UNDER AIFM AND/OR UCITS V

II-1. Employees identified

In accordance with regulatory provisions, NIMI's identified employees include the categories of employee, including executive managers, risk-takers and those exercising a control function, as well as any employee who, based on their total remuneration, is in the same remuneration bracket as executive managers and risk-takers, whose employment activities have a material impact on the risk profile of the Management Company and/or the products managed by the Management Company. These persons are identified based on their employment activities, their level of responsibility or their overall level of remuneration.

To maintain consistency and alignment, NIMI has decided to implement the system applicable to identified employees across the full scope of products managed (mandates, UCITS and AIFs).

Additional unaudited information

Remuneration policy

The following employee categories are identified:
- Members of the management body
- Members of staff responsible for portfolio management
- Managers of control functions (risk, compliance and internal control)
- Managers of support or administrative activities
- Other risk-takers
- Employees who, given their overall remuneration, are in the same remuneration bracket as general management and risk-takers

Each year, prior to the annual remuneration review, the Human Resources Department draws up and formally records the identification methodology and scope of NIMI's identified employees, in conjunction with the Director of Permanent Controls.

The names of all identified employees are then validated by NIMI's General Management and sent for approval to the Board of Directors in its supervisory function, before being provided to the Natixis Remuneration Committee.

The entire identification process is documented and archived by the Human Resources Department. The employees concerned are also informed of their status.

II-2. Scheme applicable to variable remuneration allocated to identified employees

In accordance with regulations and in order to ensure alignment between employees and investors and the Management Company, where the variable remuneration of identified employees exceeds a certain threshold, it is partly deferred and partly awarded in the form of a financial instrument vesting over a period of at least three years, acquired pro rata temporis.

The proportion of variable remuneration, which is deferred over three years, increases with the amount of variable remuneration awarded and may reach 60% for those with the highest remuneration at NIMI. Currently, the application methods for the deferred payment are as follows:

- Up to €199,000 in variable remuneration: no deferral
- Between €200,000 and €499,000: 50% of the amount deferred from the first euro
- From €500,000: 60% of the amount deferred from the first euro

The thresholds for triggering deferred variable remuneration are subject to change depending on regulations or changes to internal policies. In this case, the new thresholds are subject to approval by NIMI's Management Committee and the Natixis Remuneration Committee.

A minimum of 50% of variable remuneration is also awarded in financial instruments in the form of indexed cash payments:

- For teams directly involved in portfolio management, with the exception of those managing real asset private debt, on the basis of the performance of a selection of products managed by NIMI.

- For teams that are not directly involved in portfolio management and teams managing real asset private debt, on the basis of changes in NATIXIS IM's consolidated financial performance measured by its earnings before tax (EBT), recorded each year over a minimum period of three years.

The vesting of the deferred portion of variable remuneration is subject to the employee meeting certain conditions relating to continued employment and to Natixis IM's consolidated financial performance as well as the absence of conduct inconsistent with the company's standards that may have an impact on the level of risk for NIMI and/or the products managed.

This vesting is also subject to obligations in terms of adherence to the rules on risks and compliance. Failure to comply with these obligations may result in a partial or total decrease in the vesting. It may also be subject to a full or partial repayment commitment in order to ensure ex-post risk adjustment.

Employees benefiting from deferred variable remuneration are prohibited from using individual hedging or insurance strategies over the entire vesting period.

The terms and conditions for determining, valuing, awarding, vesting and paying deferred variable remuneration as an equivalent financial instrument are detailed in the NIMI and Natixis IM Long-Term Incentive Plan (LTIP).

III- GOVERNANCE

The general and specific principles of the remuneration policy are drawn up and formally documented by NIMI's Human Resources Department in line with the policy applicable to the global distribution platform.

NIMI's Permanent Controls Department and Risk Department have an active role in the development, ongoing monitoring and assessment of the remuneration policy. They are thus involved in determining the overall strategy applicable to the Management Company to promote the development of effective risk management. As such, they are involved in determining the scope of identified employees. They are also responsible for assessing the impact of the variable remuneration structure on the risk profile of managers.

NIMI's remuneration policy is approved by the NIMI Board of Directors in its supervisory function.

Additional unaudited information

Remuneration policy

The general and specific principles, the application methods and quantified data of the remuneration policy, including details of identified employees and the highest levels of remuneration, are approved in turn and in detail by the members of NIMI's Management Committee, then by an Intermediary Committee established at Federation level that encompasses all of the distribution, support and control functions of the Natixis IM Group and incorporates NIMI, in particular. This Intermediary Committee brings together the General Management teams of NIMI and Natixis IM. It then submits the above information in summary form for the approval of Natixis' General Management and then finally the Natixis Remuneration Committee.

NIMI does not have its own remuneration committee but, as a member of the Natixis Group, reports to the Natixis Remuneration Committee.

The NATIXIS Remuneration Committee was established and acts in accordance with regulations(1):
1: For more details on the composition and role of the Natixis Remuneration Committee, see the company's Registration Document.

- Both in its composition: the independence and expertise of its members, the majority of whom, like its Chairman, do not perform executive functions within NIMI, are external to the NATIXIS Group and are therefore completely independent
- And in the exercise of its duties, which in management companies more specifically includes the following roles:

  - Advice and assistance to the Board of Directors for the development and implementation of the Management Company's remuneration policy
  - Assistance to the Board of Directors in overseeing the development and operation of the Management Company's remuneration system
  - Particular attention is paid to the assessment of the mechanisms adopted to ensure that the remuneration system considers all the categories of risk, liquidity and level of assets under management in an appropriate manner and to ensure compatibility of the remuneration policy with the economic strategy, objectives, values and interests of the Management Company and the products managed, as well as with those of investors

In this context, the general and specific principles, the compliance of NIMI's remuneration policy with the applicable regulations, and the application methods and summary figures of the remuneration policy, including details of identified employees and the highest levels of remuneration, are submitted to the Natixis Remuneration Committee for a final review, before being approved by its Board of Directors in its supervisory function.
The remuneration of NIMI's Chief Executive Officer is set by the General Management teams of Natixis IM and Natixis, then presented to the Natixis Remuneration Committee.

The remuneration of NIMI's Risk and Compliance Directors is reviewed, as part of the independent reviews carried out by the risk and compliance functions, by Natixis IM's Risk and Compliance Directors. They are then submitted to the Natixis Remuneration Committee.

In short, all roles assigned to remuneration committees and set out in the regulatory texts are, in practice, performed by the Intermediary Committee established at Federation level, which incorporates NIMI, and/or by the Natixis Remuneration Committee.

The general and specific principles of the remuneration policy are communicated internally to all employees and members of the Works Council. NIMI also complies with all its obligations in terms of external advertising.

This entire review, validation and communication process takes place every year. It includes any regulatory and contextual changes and is consistent with the Natixis remuneration policy.

Finally, the entire NIMI remuneration policy is subject to a centralised and independent annual review by Natixis IM's Internal Audit Department.

When NIMI delegates the financial management of one of the portfolios that it manages to another management company, it ensures that this delegated company complies with the regulations in force.

Remuneration paid during the last financial year

The total amount of remuneration for the financial year paid by the Management Company to its staff, broken down into fixed and variable remuneration, and the number of beneficiaries, is as follows:

Fixed remuneration in 2022*: €27,383,602

Variable remuneration awarded for 2022: €9,378,250

Employees concerned: 363 employees

* Theoretical fixed remuneration for full-time equivalents (FTE) in December 2022

The aggregate amount of remuneration, broken down into the senior executives and members of staff of the Management Company whose activities have a significant impact on the risk profile of the Management Company and/or portfolios is as follows:

Total remuneration awarded for 2022: €9,689,885 including,

- Senior executives: €2,647,162
- Members of staff: €7,042,723

Employees concerned: 54

SFDR (Sustainable Finance Disclosure Regulation)

Information referred to in Article 11(2) of Regulation (EU) 2019/2088 for sub-funds classified as Article 8 and 9 on Sustainable Investment is available in the Additional unaudited information SFDR (Sustainable Finance Disclosure Regulation) section.

Global exposure calculation method

The following sub-funds use the commitment approach in order to monitor and measure the global market risk exposure:

- Mirova Global Sustainable Equity Fund
- Mirova US Sustainable Equity Fund (launched on 7 June 2022)
- Mirova Europe Sustainable Equity Fund
- Mirova Euro Sustainable Equity Fund
- Mirova Global Environmental Equity Fund
- Mirova Europe Environmental Equity Fund
- Mirova Future of Food Fund (launched on 15 November 2022)
- Mirova Women Leaders Equity Fund
- Mirova Global Climate Ambition Equity Fund
- Mirova Europe Climate Ambition Equity Fund
- Mirova US Climate Ambition Equity Fund
- Mirova Global Green Bond Fund
- Mirova Euro Green and Sustainable Bond Fund
- Mirova Euro Green and Sustainable Corporate Bond Fund
- Mirova Euro High Yield Sustainable Bond Fund (launched on 20 June 2022)
- Mirova Euro Short Term Sustainable Bond Fund (launched on 20 June 2022)
- Mirova Europe Sustainable Economy Fund

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **MIROVA FUNDS - Mirova Global Sustainable Equity Fund**
Legal entity identifier: 549300YFL5N62BEI1F89

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?

☒ Yes	☐ No
[X] It made **sustainable investments with an environmental objective:** 41.1%	[ ] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
[X] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[X] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[ ] with a social objective
[X] It made **sustainable investments with a social objective:** 57.05%	[ ] It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to allocate the capital towards companies:

- that address opportunities created by four long-term transitions: demographic, environmental, technological, governance (collectively the "Transitions Themes"); and
- whose economics activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the "SDGs").

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the "Taxonomy Regulation") aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria.

The alignment of the economics activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

98.15% of the Fund's net assets were aligned with sustainable investment objectives as of 31/12/2022. Alignment with EU Taxonomy amounted to 7.11%.

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

How did the sustainability indicators perform?

Benchmark: MSCI WORLD INDEX NET TOTAL RETURN EUR

The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

SUSTAINABILITY OPINION BREAKDOWN*

in % of assets, cash equivalence excluded

	"Committed" / "Positive" opinions
Fund	81.9%
Index	33.2%

Achievement of UN SDGs**

- Committed : Contributes very favorably to achieving the SDGs
- Positive : Contributes positively to achieving the SDGs
- Neutral : In line with some of the SDGs, but impacts are low or unquantified
- Risk : Hinders achievement of the SDGs
- Negative : Strongly opposes achievement of the SDGs
- Not followed : Not rated by either Mirova or ISS ESG

The ESG Opinion is designed to assess whether the investment is compatible with the UN SDGs and is based upon the analysis of Mirova and ISS ESG, a third party.
The opinion does not guarantee a profit or protect against a loss, and does not ensure the stability or safety of the overall portfolio.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

	Fund	Index
	<2°C	3.5-4°C
Induced Emissions *(tCO_2 / million € company value)*	60.6	142.0
Avoided Emissions *(tCO_2 / million € company value)*	18.2	8.1
Coverage rate *(% of holdings analysed)*	100%	99%

In 2015, Mirova and Carbone 4 jointly developed a method* which assesses carbon data in view of the specific challenges facing a low carbon economy: Carbon Impact Analytics (CIA).
Companies are initially assessed individually according to a specific sector framework. This method focuses on two main indicators:

- "induced" emissions arising from the "lifecycle" of a company's activities, taking into account both direct emissions and those of suppliers and products
- "avoided" emissions due to improvements in energy efficiency or "green" solutions

These indicators are enhanced with an assessment of corporate policies and decarbonisation targets.
Individual company assessments are then used to calculate the fund's alignment with a global warming pathway of 1.5°C to 5°C by 2100.
For more information about our methodologies, please refer to our Mirova website www.mirova.com/en/research/demonstrating-impact.
*As of 05/31/2022, this methodology has changed. The main change concerns how we determine the temperature (which now includes a qualitative analysis of the company's decarbonization strategy), and how we display the temperature (by ranges rather than exact 0.1 precision temperatures).

CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

in % of assets with Committed/positive opinions

	Mirova pillars	Extent to which an asset contributes to the SDGs corresponding to each pillar	
		Fund	Index
Environment	CLIMATE STABILITY Limit greenhouse gas levels to stabilize global temperature rise under 2°C	34%	17%
	HEALTHY ECO-SYSTEMS Maintain ecologically sound landscape and seas for nature and people	29%	8%
	RESOURCE SECURITY Preserve stocks of natural resources through efficient and circular use	35%	7%
Social	BASIC NEEDS Basic services (food, water, energy, transport, health, etc.) for all	29%	11%
	WELL BEING Enhanced health education, justice and equality of opportunity for all	39%	16%
	DECENT WORK Secure socially inclusive jobs and working conditions for all	20%	9%

The United Nations adopted 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. Please see an overview relating to all SDGs (1-17) on the UN's website: www.un.org/sustainabledevelopment/sustainable-development-goals/.
This chart displays to what extent an asset contributes to the UN Sustainable Development Goals ("SDGs"). Mirova has signed an agreement with Cambridge University, based on a research partnership focusing on sustainable development themes as well as the establishment of a task force in 2013, the Investors Leaders Group. To illustrate the main sustainability impacts of our investments, six impact pillars have been developed, three environmental and three social, for each asset (as displayed on the left). The same assets may contribute to several pillars / SDGs.

The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar).
Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.
* For more information on our methodologies, please refer to our Mirova website : https://www.mirova.com/en/research
**In 2015, all countries around the world agreed on 17 universal sustainable development goals (SDG) to end poverty, combat inequality and injustice and fight against climate change between now and 2030.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of

exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies.

As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

As a consequence, over the reporting period, all investment in the Fund were complying with the Investment Manager's DNSH criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question.

Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Adverse Sustainability indicator		How PAIs are taken into account by Mirova
Greenhouse gas emissions	**1. GHG emissions**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	- Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO2/kWh.
	5. Share of non-renewable energy consumption and production	- Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	- Integration in qualitative internal analysis when relevant
Biodiversity	**7. Activities negatively affecting biodiversity-sensitive areas**	- Exclusion of companies or projects significantly harming biodiversity sensitive areas - Systematic integration in qualitative internal analysis - Part of controversy analysis
Water	**8. Emissions to water**	- Integration in qualitative internal analysis when relevant
Waste	**9. Hazardous waste and radioactive waste ratio**	- Integration in qualitative internal analysis when relevant
Social and Employee matters	**10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises**	- Exclusion of companies violating UNGC and OECD principles - Systematic integration in qualitative internal analysis - Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	- Exclusion for large companies, case-by-case for small companies or projects - Systematic integration in qualitative internal analysis - Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	13. Board gender diversity	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	- Exclusion (0% sales threshold)
Additional PAI Indicators	**4. Investments in companies without carbon emission reduction initiatives**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment manager screens investee companies against adherence with OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights.

The investment manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance.

Companies determined by the investment manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible.

Therefore, over the reporting period, all investments were considered to be respectful of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country

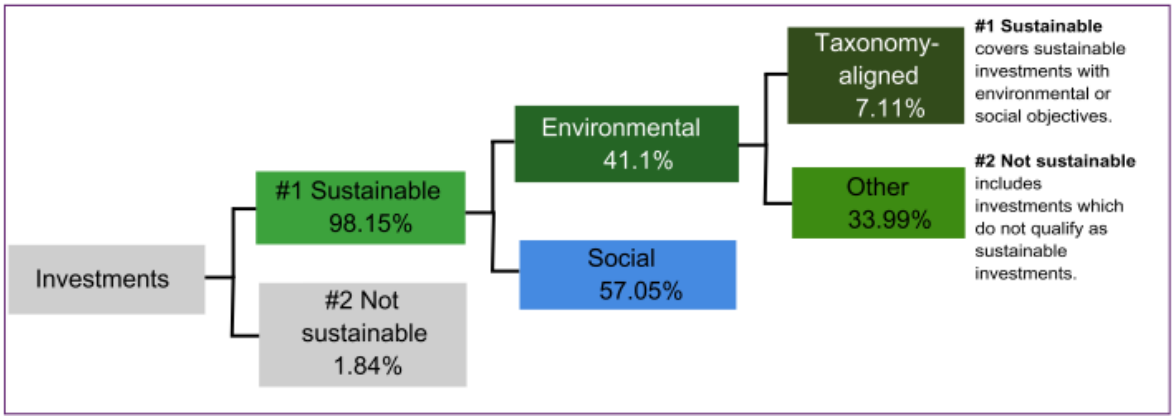
What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 98.15% of the Fund's net assets have been aligned with sustainable investment objectives as of 31/12/2022.

The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?



In which economic sectors were the investments made?

MSCI Breakdown

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the “Taxonomy Regulation”) : (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives (limited to the objective (a) as of today) is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing. The estimations are performed under conditions defined by the regulations and respect the principle of prudence. As a result, the alignment percentage provided is conservative.

7.11% of the Fund’s net assets are aligned with the EU taxonomy as of 31/12/2022.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with EU Taxonomy[1]?

☐ Yes :

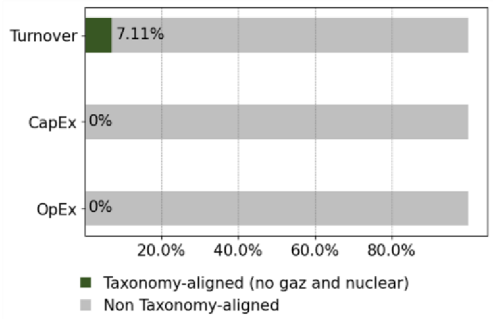
☐ In fossil gas ☐ In nuclear energy

☒ No

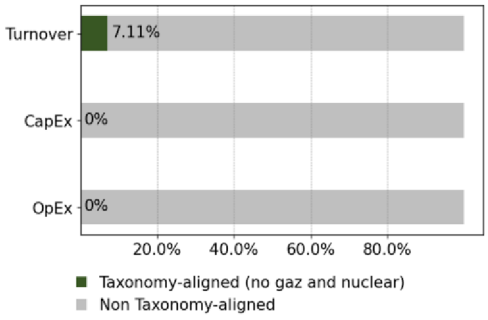
At the reporting date, based on the available reported and estimated issuer data, the management company did not identify any gas or nuclear taxonomy alignment in the investment portfolio.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1.Taxonomy-alignment of investments **including sovereign bonds***



2.Taxonomy-alignment of investments **excluding sovereign bonds***



This graph represents **100%** of the total investments.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities was 2.64%.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 41.10% in sustainable investments with an environmental objective that may include sustainable investments that are not aligned with the EU taxonomy.

The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 57.05% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion.

These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;

- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in equity securities qualifying as sustainable investment.

For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes up to 10% of its net assets. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach.

Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.

Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices.

Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at https://www.mirova.com/en/research/voting-and-engagement.

How did this financial product perform compared to the reference sustainable benchmark?

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **MIROVA FUNDS - Mirova US Sustainable Equity Fund**
Legal entity identifier: 222100UM7LJSGLHKZ042

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?	
●● [X] **Yes**	●● [ ] **No**
[X] It made **sustainable investments with an environmental objective:** 44.25%	[ ] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
[X] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[X] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[ ] with a social objective
[X] It made **sustainable investments with a social objective:** 53.95%	[ ] It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to allocate the capital towards companies:

- that address opportunities created by four long-term transitions: demographic, environmental, technological, governance (collectively the "Transitions Themes"); and
- whose economics activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the "SDGs").

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the "Taxonomy Regulation") aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria.

The alignment of the economics activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

98.20% of the Fund's net assets were aligned with sustainable investment objectives as of 31/12/2022. Alignment with EU Taxonomy amounted to 10.15%.

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

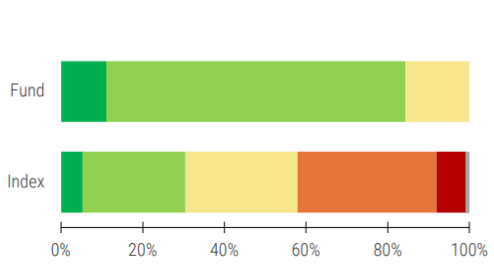
How did the sustainability indicators perform?

Benchmark :S&P 500 TOTAL RETURN EUR

The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

SUSTAINABILITY OPINION BREAKDOWN*

in % of assets, cash equivalence excluded



"Committed" / "Positive" opinions

Fund 84.3%

Index 30.4%

Achievement of UN SDGs**

- Committed : Contributes very favorably to achieving the SDGs
- Positive : Contributes positively to achieving the SDGs
- Neutral : In line with some of the SDGs, but impacts are low or unquantified
- Risk : Hinders achievement of the SDGs
- Negative : Strongly opposes achievement of the SDGs
- Not followed : Not rated by either Mirova or ISS ESG

The ESG Opinion is designed to assess whether the investment is compatible with the UN SDGs and is based upon the analysis of Mirova and ISS ESG, a third party.
The opinion does not guarantee a profit or protect against a loss, and does not ensure the stability or safety of the overall portfolio.

CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

in % of assets with Committed/positive opinions

Mirova pillars		Extent to which an asset contributes to the SDGs corresponding to each pillar	
		Fund	Index
Environment	CLIMATE STABILITY Limit greenhouse gas levels to stabilize global temperature rise under 2°C	34%	16%
	HEALTHY ECO-SYSTEMS Maintain ecologically sound landscape and seas for nature and people	35%	10%
	RESOURCE SECURITY Preserve stocks of natural resources through efficient and circular use	41%	5%
Social	BASIC NEEDS Basic services (food, water, energy, transport, health, etc.) for all	27%	10%
	WELL BEING Enhanced health education, justice and equality of opportunity for all	33%	15%
	DECENT WORK Secure socially inclusive jobs and working conditions for all	18%	9%

The United Nations adopted 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. Please see an overview relating to all SDGs (1-17) on the UN´s website: www.un.org/sustainabledevelopment/sustainable-development-goals/.
This chart displays to what extent an asset contributes to the UN Sustainable Development Goals ("SDGs"). Mirova has signed an agreement with Cambridge University, based on a research partnership focusing on sustainable development themes as well as the establishment of a task force in 2013, the Investors Leaders Group. To illustrate the main sustainability impacts of our investments, six impact pillars have been developed, three environmental and three social, for each asset (as displayed on the left). The same assets may contribute to several pillars / SDGs.

The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar).
Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.
* For more information on our methodologies, please refer to our Mirova website : https://www.mirova.com/en/research
**In 2015, all countries around the world agreed on 17 universal sustainable development goals (SDG) to end poverty, combat inequality and injustice and fight against climate change between now and 2030.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

	Fund	Index
	<2°C	3.5-4°C
Induced Emissions *(tCO_2 / million € company value)*	68.3	114.0
Avoided Emissions *(tCO_2 / million € company value)*	26.3	6.0
Coverage rate *(% of holdings analysed)*	100%	99%

In 2015, Mirova and Carbone 4 jointly developed a method* which assesses carbon data in view of the specific challenges facing a low carbon economy: Carbon Impact Analytics (CIA).
Companies are initially assessed individually according to a specific sector framework. This method focuses on two main indicators:

- "induced" emissions arising from the "lifecycle" of a company's activities, taking into account both direct emissions and those of suppliers and products
- "avoided" emissions due to improvements in energy efficiency or "green" solutions

These indicators are enhanced with an assessment of corporate policies and decarbonisation targets.
Individual company assessments are then used to calculate the fund's alignment with a global warming pathway of 1.5°C to 5°C by 2100.
For more information about our methodologies, please refer to our Mirova website www.mirova.com/en/research/demonstrating-impact.
*As of 05/31/2022, this methodology has changed. The main change concerns how we determine the temperature (which now includes a qualitative analysis of the company's decarbonization strategy), and how we display the temperature (by ranges rather than exact 0.1 precision temperatures).

vHow did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be

considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies.

As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question.

Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Adverse Sustainability indicator		How PAIs are taken into account by Mirova
Greenhouse gas emissions	**1. GHG emissions**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	- Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO2/kWh.
	5. Share of non-renewable energy consumption and production	- Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	- Integration in qualitative internal analysis when relevant
Biodiversity	**7. Activities negatively affecting biodiversity-sensitive areas**	- Exclusion of companies or projects significantly harming biodiversity sensitive areas - Systematic integration in qualitative internal analysis - Part of controversy analysis
Water	**8. Emissions to water**	- Integration in qualitative internal analysis when relevant
Waste	**9. Hazardous waste and radioactive waste ratio**	- Integration in qualitative internal analysis when relevant
Social and Employee matters	**10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises**	- Exclusion of companies violating UNGC and OECD principles - Systematic integration in qualitative internal analysis - Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	- Exclusion for large companies, case-by-case for small companies or projects - Systematic integration in qualitative internal analysis - Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	13. Board gender diversity	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	- Exclusion (0% sales threshold)
Additional PAI Indicators	**4. Investments in companies without carbon emission reduction initiatives**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights.

The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance.

Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible.

As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country

Communication Services	2.0	7.3
Real Estate	-	2.7
Energy	-	5.2
Cash & cash equivalent	1.8	-

MSCI Breakdown

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation"): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives (limited to the objective (a) as of today) is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing.

The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative.

10.15% of the Fund's net assets are aligned with the EU taxonomy as of 31/12/2022.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with EU Taxonomy[1]?

☐ Yes :

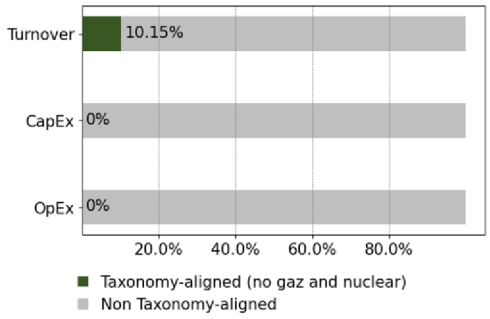
☐ In fossil gas ☐ In nuclear energy

☒ No

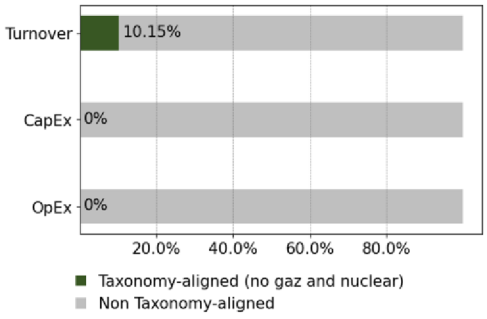
At the reporting date, based on the available reported and estimated issuer data, the management company did not identify any gas or nuclear taxonomy alignment in the investment portfolio.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1.Taxonomy-alignment of investments **including sovereign bonds***



2.Taxonomy-alignment of investments **excluding sovereign bonds***



This graph represents **100%** of the total investments.

** **For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities was 3.83%.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 44.25% in sustainable investments with an environmental objective that may include sustainable investments that are not aligned with the EU taxonomy.

The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 53.95% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion.

These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment.

For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach.

Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices.

Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at https://www.mirova.com/en/research/voting-and-engagement.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **MIROVA FUNDS - Mirova Europe Sustainable Equity Fund**
Legal entity identifier: 549300NFW1DEW38PJO76

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?	
●● [✖] **Yes**	●● [ ] **No**
[X] It made **sustainable investments with an environmental objective:** 57.25%	[ ] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
[X] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[X] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[ ] with a social objective
[X] It made **sustainable investments with a social objective:** 39.2%	[ ] It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to allocate the capital towards companies:

- that address opportunities linked to major sustainable themes such as biodiversity, climate, diversity human capital, health human development, and

- whose economics activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the “SDGs”).

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the “Taxonomy Regulation”) aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria.

The alignment of the economics activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

96.45% of the Fund’s net assets were aligned with sustainable investment objectives as of 31/12/2022. Alignment with EU Taxonomy amounted to 10.55%.

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

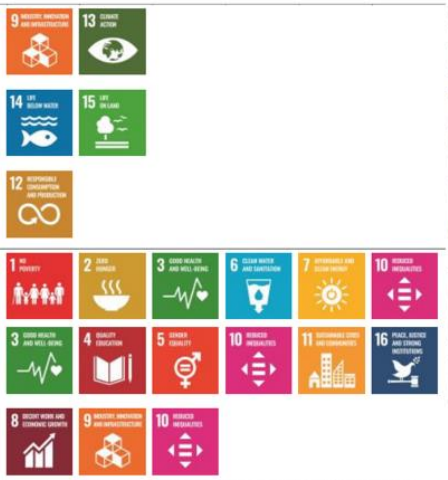
	WELL BEING Enhanced health education, justice and equality of opportunity for all	40%	25%
	DECENT WORK Secure socially inclusive jobs and working conditions for all	25%	16%



The United Nations adopted 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. Please see an overview relating to all SDGs (1-17) on the UN´s website: www.un.org/sustainabledevelopment/sustainable-development-goals/.
This chart displays to what extent an asset contributes to the UN Sustainable Development Goals ("SDGs"). Mirova has signed an agreement with Cambridge University, based on a research partnership focusing on sustainable development themes as well as the establishment of a task force in 2013, the Investors Leaders Group. To illustrate the main sustainability impacts of our investments, six impact pillars have been developed, three environmental and three social, for each asset (as displayed on the left). The same assets may contribute to several pillars / SDGs.

The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar).
Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.
* For more information on our methodologies, please refer to our Mirova website : https://www.mirova.com/en/research
**In 2015, all countries around the world agreed on 17 universal sustainable development goals (SDG) to end poverty, combat inequality and injustice and fight against climate change between now and 2030.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

	Fund	Index
	<2°C	2.5-3°C
Induced Emissions *(tCO_2 / million € company value)*	140.0	200.9
Avoided Emissions *(tCO_2 / million € company value)*	45.5	12.4
Coverage rate *(% of holdings analysed)*	98%	99%

In 2015, Mirova and Carbone 4 jointly developed a method* which assesses carbon data in view of the specific challenges facing a low carbon economy: Carbon Impact Analytics (CIA).
Companies are initially assessed individually according to a specific sector framework.
This method focuses on two main indicators:

- "induced" emissions arising from the "lifecycle" of a company's activities, taking into account both direct emissions and those of suppliers and products
- "avoided" emissions due to improvements in energy efficiency or "green" solutions

These indicators are enhanced with an assessment of corporate policies and decarbonisation targets.
Individual company assessments are then used to calculate the fund's alignment with a global warming pathway of 1.5°C to 5°C by 2100.
For more information about our methodologies, please refer to our Mirova website www.mirova.com/en/research/demonstrating-impact.
*As of 05/31/2022, this methodology has changed. The main change concerns how we determine the temperature (which now includes a qualitative analysis of the company's decarbonization strategy), and how we display the temperature (by ranges rather than exact 0.1 precision temperatures).

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies.

As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question.

Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Adverse Sustainability indicator		How PAIs are taken into account by Mirova
Greenhouse gas emissions	**1. GHG emissions**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	- Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO2/kWh.
	5. Share of non-renewable energy consumption and production	- Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	- Integration in qualitative internal analysis when relevant
Biodiversity	**7. Activities negatively affecting biodiversity-sensitive areas**	- Exclusion of companies or projects significantly harming biodiversity sensitive areas - Systematic integration in qualitative internal analysis - Part of controversy analysis
Water	**8. Emissions to water**	- Integration in qualitative internal analysis when relevant
Waste	**9. Hazardous waste and radioactive waste ratio**	- Integration in qualitative internal analysis when relevant
Social and Employee matters	**10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises**	- Exclusion of companies violating UNGC and OECD principles - Systematic integration in qualitative internal analysis - Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	- Exclusion for large companies, case-by-case for small companies or projects - Systematic integration in qualitative internal analysis - Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	13. Board gender diversity	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	- Exclusion (0% sales threshold)
Additional PAI Indicators	**4. Investments in companies without carbon emission reduction initiatives**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights.

The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance.

Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible.

As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country
ROCHE SE CHF	Pharmaceuticals	3.93%	Switzerland
ASTRAZENECA LN GBp	Pharmaceuticals	3.79%	United Kingdom
ASML HOLDING NA EUR	Semiconductor Equipment	3.67%	Netherlands
KBC GROUP BB EUR	Diversified Banks	3.1%	Belgium
RENAULT SA FP EUR	Automobile Manufacturers	3.05%	France

CREDIT FP EUR	Diversified Banks	2.54%	France

Please note that the name of the investment and the percentage of assets may differ from the ones shown in the portfolio.

The displayed country is the country of risk

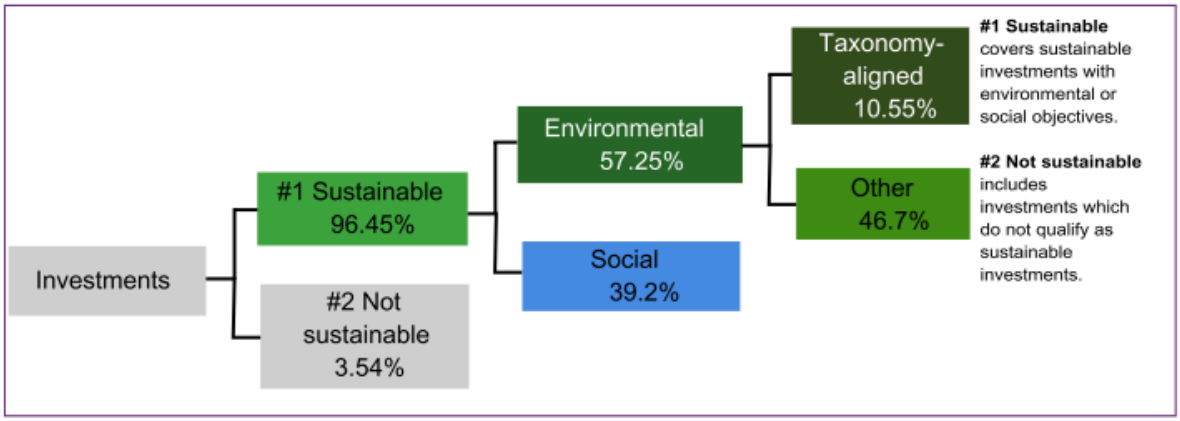
What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 96.45% of the Fund's net assets have been aligned with sustainable investment objectives as of 31/12/2022.

The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?



In which economic sectors were the investments made?

SECTOR BREAKDOWN (%)	Fund	Index
Financials	17.5	16.8
Industrials	14.4	14.2
Health Care	12.4	15.5
Materials	12.3	7.4
Utilities	11.5	4.4
Information Technology	10.9	6.9
Consumer Discretionary	7.4	10.8
Consumer Staples	4.6	13.1
Communication Services	4.0	3.3
Energy	-	6.6
Real Estate	-	0.9
Mutual Funds	2.6	-
Cash & cash equivalent	2.4	-

MSCI Breakdown

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation"): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives (limited to the objective (a) as of today) is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing.

The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative.

10.55% of the Fund's net assets are aligned with the EU taxonomy as of 31/12/2022.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with EU Taxonomy[1]?

☐ Yes :

☐ In fossil gas ☐ In nuclear energy

☒ No

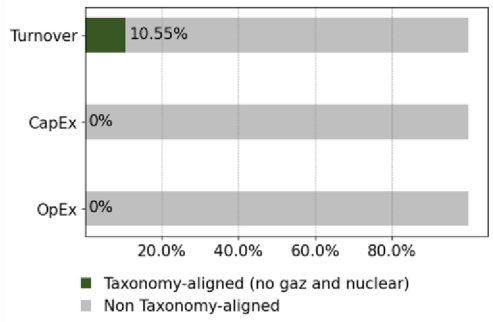
At the reporting date, based on the available reported and estimated issuer data, the management company did not identify any gas or nuclear taxonomy alignment in the investment portfolio.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

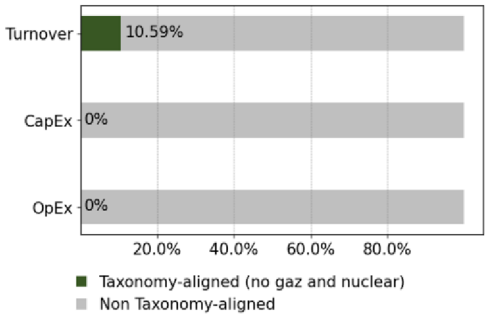
Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1.Taxonomy-alignment of investments **including sovereign bonds***



2.Taxonomy-alignment of investments **excluding sovereign bonds***



This graph represents **100%** of the total investments.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities was 6.08%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 57.25% in sustainable investments with an environmental objective that may include sustainable investments that are not aligned with the EU taxonomy.

The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 39.20% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion.

These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment.

For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach.

Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices.

Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at https://www.mirova.com/en/research/voting-and-engagement.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- ***How did the reference benchmark differ from a broad market index?***

  Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***

  Not applicable

- ***How did this financial product perform compared with the reference benchmark?***

  Not applicable

- ***How did this financial product perform compared with the broad market index?***

  Not applicable

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **MIROVA FUNDS - Mirova Euro Sustainable Equity Fund**
Legal entity identifier: 549300JITTGS73M7F683

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?	
●● [✖] **Yes**	●● [ ] **No**
[X] It made **sustainable investments with an environmental objective:** 52.61%	[ ] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
[X] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[X] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[ ] with a social objective
[X] It made **sustainable investments with a social objective:** 43.88%	[ ] It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to allocate the capital towards companies:

- that address opportunities linked to major sustainable themes such as biodiversity, climate, diversity human capital, health human development, and

- whose economics activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the “SDGs”).

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the “Taxonomy Regulation”) aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria.

The alignment of the economics activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

96.49% of the Fund’s net assets were aligned with sustainable investment objectives as of 31/12/2022. Alignment with EU Taxonomy amounted to 5.61%.

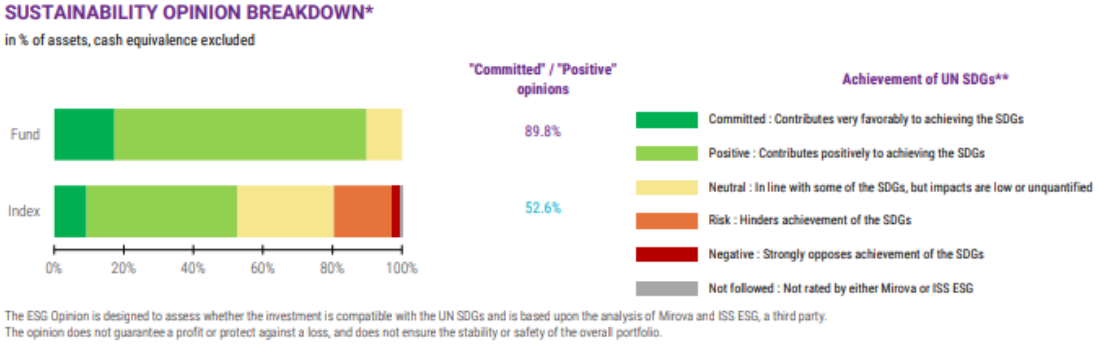
The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

How did the sustainability indicators perform?

Benchmark: MSCI EMU DNR €

The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.



CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

in % of assets with Committed/positive opinions

	Mirova pillars	Extent to which an asset contributes to the SDGs corresponding to each pillar Fund	Index
Environment	CLIMATE STABILITY Limit greenhouse gas levels to stabilize global temperature rise under 2°C	67%	37%
	HEALTHY ECO-SYSTEMS Maintain ecologically sound landscape and seas for nature and people	32%	12%
	RESOURCE SECURITY Preserve stocks of natural resources through efficient and circular use	40%	17%
Social	BASIC NEEDS Basic services (food, water, energy, transport, health, etc.) for all	16%	12%
	WELL BEING Enhanced health education, justice and equality of opportunity for all	33%	21%
	DECENT WORK Secure socially inclusive jobs and working conditions for all	37%	26%

The United Nations adopted 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. Please see an overview relating to all SDGs (1-17) on the UN's website: www.un.org/sustainabledevelopment/sustainable-development-goals/.
This chart displays to what extent an asset contributes to the UN Sustainable Development Goals ("SDGs"). Mirova has signed an agreement with Cambridge University, based on a research partnership focusing on sustainable development themes as well as the establishment of a task force in 2013, the Investors Leaders Group. To illustrate the main sustainability impacts of our investments, six impact pillars have been developed, three environmental and three social, for each asset (as displayed on the left). The same assets may contribute to several pillars / SDGs.

The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar).
Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.

**In 2015, all countries around the world agreed on 17 universal sustainable development goals (SDG) to end poverty, combat inequality and injustice and fight against climate change between now and 2030.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

	Fund	Index
	<2°C	2.5-3°C
Induced Emissions *(tCO_2 / million € company value)*	172.1	212.2
Avoided Emissions *(tCO_2 / million € company value)*	25.3	17.3
Coverage rate *(% of holdings analysed)*	99%	99%

In 2015, Mirova and Carbone 4 jointly developed a method* which assesses carbon data in view of the specific challenges facing a low carbon economy: Carbon Impact Analytics (CIA).
Companies are initially assessed individually according to a specific sector framework. This method focuses on two main indicators:

- "induced" emissions arising from the "lifecycle" of a company's activities, taking into account both direct emissions and those of suppliers and products
- "avoided" emissions due to improvements in energy efficiency or "green" solutions

These indicators are enhanced with an assessment of corporate policies and decarbonisation targets.
Individual company assessments are then used to calculate the fund's alignment with a global warming pathway of 1.5°C to 5°C by 2100.
For more information about our methodologies, please refer to our Mirova website www.mirova.com/en/research/demonstrating-impact.
*As of 05/31/2022, this methodology has changed. The main change concerns how we determine the temperature (which now includes a qualitative analysis of the company's decarbonization strategy), and how we display the temperature (by ranges rather than exact 0.1 precision temperatures).

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies.

As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

Therefore, over the reporting period, all investment in the Fund were complying with the Investment Manager's DNSH criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question.

Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organizations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Adverse Sustainability indicator		How PAIs are taken into account by Mirova
Greenhouse gas emissions	**1. GHG emissions**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	- Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO2/kWh.

	14. Number of identified cases of severe human rights issues and incidents	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment manager screens investee companies against adherence with OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights.

The investment manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance.

Companies determined by the investment manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible.

Therefore, over the reporting period, all investments were considered to be respectful of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country
ASML HOLDING NA EUR	Semiconductor Equipment	5.08%	Netherlands

MSCI Breakdown

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation") : (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives (limited to the objective (a) as of today) is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing. The estimations are performed under conditions defined by the regulations and respect the principle of prudence. As a result, the alignment percentage provided is conservative.

5.61% of the Fund's net assets are aligned with the EU taxonomy as of 31/12/2022.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with EU Taxonomy[1]?

☐ Yes :

☐ In fossil gas ☐ In nuclear energy

☒ No

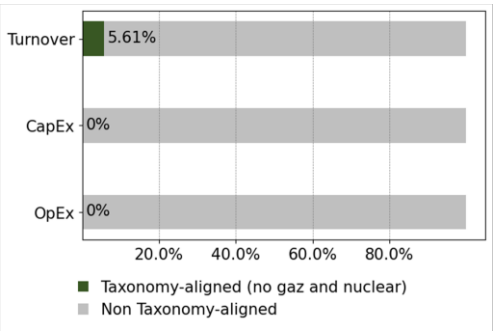
At the reporting date, based on the available reported and estimated issuer data, the management company did not identify any gas or nuclear taxonomy alignment in the investment portfolio.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

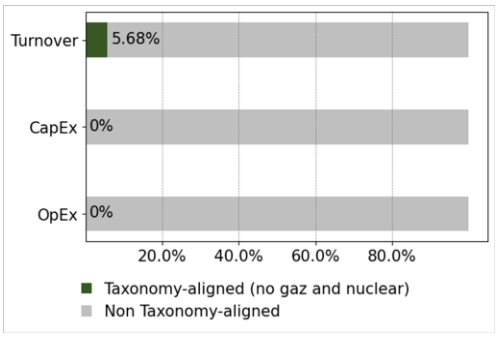
Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1.Taxonomy-alignment of investments **including sovereign bonds***



2.Taxonomy-alignment of investments **excluding sovereign bonds***



This graph represents **100%** of the total investments.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities was 1.92%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 52.61% in sustainable investments with an environmental objective that may include sustainable investments that are not aligned with the EU taxonomy.

The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 43.88% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion.

These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in equity securities qualifying as sustainable investment.

For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach.

Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.

Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices.

Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at https://www.mirova.com/en/research/voting-and-engagement.

How did this financial product perform compared to the reference sustainable benchmark?

Not Applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **MIROVA FUNDS - Mirova Global Environmental Equity Fund**
Legal entity identifier: 549300ZE017F2I3ZBL80

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?	
☒ **Yes**	☐ **No**
[X] It made **sustainable investments with an environmental objective:** 90.61%	[ ] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
[X] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[X] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[ ] with a social objective
[X] It made **sustainable investments with a social objective:** 8.88%	[ ] It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to allocate the capital towards companies:

- that deliver ecological solutions and green technologies that favor the environmental transition and address key sustainable themes: renewable

energy, industrial energy efficiency, sustainable waste and water management management, sustainable land use, clean transportation, green building, and

- whose economics activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the "SDGs").

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the "Taxonomy Regulation") aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria.

The alignment of the economics activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

99.50% of the Fund's net assets were aligned with sustainable investment objectives as of 31/12/2022. Alignment with EU Taxonomy amounted to 24.73%.

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

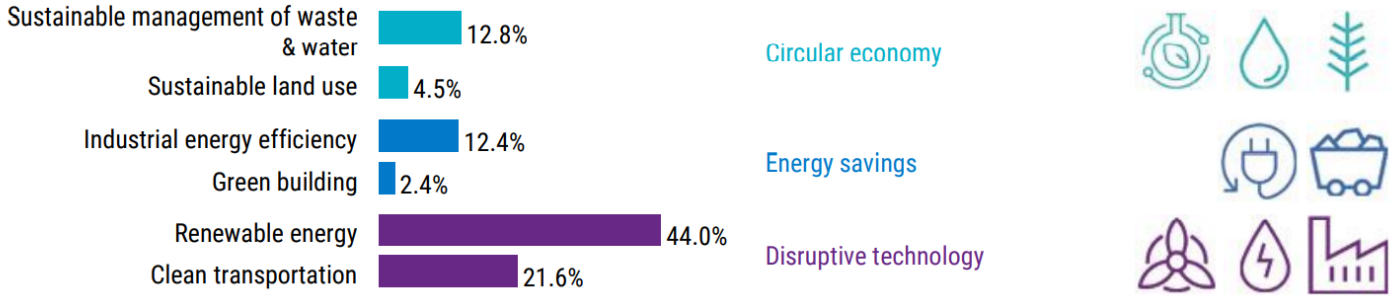
Sustainability indicators measure how the sustainable objectives of this financial product are attained.

- ***How did the sustainability indicators perform?***

  Benchmark: MSCI WORL NET TOTAL RETURN EUR INDEX

  The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

EXPOSURE TO ECO-ACTIVITIES



The data mentioned reflect the situation as of the date of this document and are subject to change without notice. References to a ranking, label, award and/or rating are not indicative of the future performance of the fund or the manager.

SUSTAINABILITY OPINION BREAKDOWN*

in % of assets, cash equivalence excluded

	"Committed" / "Positive" opinions
Fund	99.0%
Index	33.2%

Achievement of UN SDGs**

- Committed : Contributes very favorably to achieving the SDGs
- Positive : Contributes positively to achieving the SDGs
- Neutral : In line with some of the SDGs, but impacts are low or unquantified
- Risk : Hinders achievement of the SDGs
- Negative : Strongly opposes achievement of the SDGs
- Not followed : Not rated by either Mirova or ISS ESG

CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

in % of assets with Committed/positive opinions

Mirova pillars		Extent to which an asset contributes to the SDGs corresponding to each pillar	
		Fund	Index
Environment	CLIMATE STABILITY Limit greenhouse gas levels to stabilize global temperature rise under 2°C	88%	17%
	HEALTHY ECO-SYSTEMS Maintain ecologically sound landscape and seas for nature and people	42%	8%
	RESOURCE SECURITY Preserve stocks of natural resources through efficient and circular use	49%	7%
Social	BASIC NEEDS Basic services (food, water, energy, transport, health, etc.) for all	2%	11%
	WELL BEING Enhanced health education, justice and equality of opportunity for all	23%	16%
	DECENT WORK Secure socially inclusive jobs and working conditions for all	2%	9%

The United Nations adopted 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. Please see an overview relating to all SDGs (1-17) on the UN´s website: www.un.org/sustainabledevelopment/sustainable-development-goals/. This chart displays to what extent an asset contributes to the UN Sustainable Development Goals ("SDGs"). Mirova has signed an agreement with Cambridge University, based on a research partnership focusing on sustainable development themes as well as the establishment of a task force in 2013, the Investors Leaders Group. To illustrate the main sustainability impacts of our investments, six impact pillars have been developed, three environmental and three social, for each asset (as displayed on the left). The same assets may contribute to several pillars / SDGs.

The ESG Opinion is designed to assess whether the investment is compatible with the UN SDGs and is based upon the analysis of Mirova and ISS ESG, a third party.
The opinion does not guarantee a profit or protect against a loss, and does not ensure the stability or safety of the overall portfolio.
The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar). *
Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.*
Due to active management, portfolio characteristics are subject to change. References to specific securities or industries should not be considered a recommendation.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

	Fund	Index
	1.5°C	3.5-4°C
Induced Emissions *(tCO_2 / million € company value)*	138.1	142.0
Avoided Emissions *(tCO_2 / million € company value)*	34.3	8.1
Coverage rate *(% of holdings analysed)*	91%	99%

In 2015, Mirova and Carbone 4 jointly developed a method* which assesses carbon data in view of the specific challenges facing a low carbon economy: Carbon Impact Analytics (CIA).
Companies are initially assessed individually according to a specific sector framework. This method focuses on two main indicators:

- "induced" emissions arising from the "lifecycle" of a company's activities, taking into account both direct emissions and those of suppliers and products
- "avoided" emissions due to improvements in energy efficiency or "green" solutions

These indicators are enhanced with an assessment of corporate policies and decarbonisation targets.
Individual company assessments are then used to calculate the fund's alignment with a global warming pathway of 1.5°C to 5°C by 2100.
For more information about our methodologies, please refer to our Mirova website www.mirova.com/en/research/demonstrating-impact.
*As of 05/31/2022, this methodology has changed. The main change concerns how we determine the temperature (which now includes a qualitative analysis of the company's decarbonization strategy), and how we display the temperature (by ranges rather than exact 0.1 precision temperatures).

Overall fund AuM help to avoid

2,643 tCO_2

equivalent to

801 European households
In Europe, a household emits an average of 3.3 tCO_2/year for heating and electricity

or

1,554 Cars
In Europe, a standard car emits on average around 1.7 tCO_2/year

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies.

As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available,

the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question.

Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Adverse Sustainability indicator		How PAIs are taken into account by Mirova
Greenhouse gas emissions	**1. GHG emissions**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	- Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO2/kWh.
	5. Share of non-renewable energy consumption and production	- Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	- Integration in qualitative internal analysis when relevant
Biodiversity	**7. Activities negatively affecting biodiversity-sensitive areas**	- Exclusion of companies or projects significantly harming biodiversity sensitive areas - Systematic integration in qualitative internal analysis - Part of controversy analysis
Water	**8. Emissions to water**	- Integration in qualitative internal analysis when relevant
Waste	**9. Hazardous waste and radioactive waste ratio**	- Integration in qualitative internal analysis when relevant
Social and Employee matters	**10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises**	- Exclusion of companies violating UNGC and OECD principles - Systematic integration in qualitative internal analysis - Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	- Exclusion for large companies, case-by-case for small companies or projects - Systematic integration in qualitative internal analysis - Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	13. Board gender diversity	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	- Exclusion (0% sales threshold)
Additional PAI Indicators	**4. Investments in companies without carbon emission reduction initiatives**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights.

The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance.

Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible.

As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

MSCI Breakdown

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation"): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives (limited to the objective (a) as of today) is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing.

The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative.

24.73% of the Fund's net assets are aligned with the EU taxonomy as of 31/12/2022.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with EU Taxonomy[1]?

☐ Yes :

☐ In fossil gas ☐ In nuclear energy

☒ No

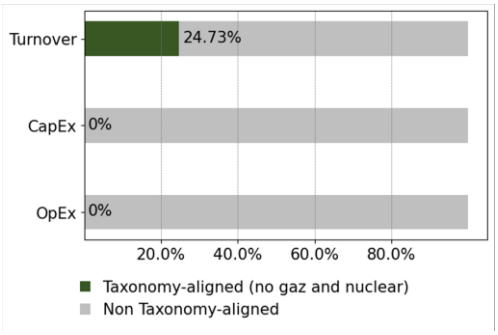
At the reporting date, based on the available reported and estimated issuer data, the management company did not identify any gas or nuclear taxonomy alignment in the investment portfolio.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

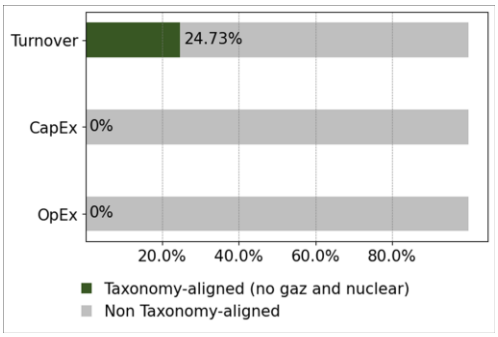
Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1.Taxonomy-alignment of investments **including sovereign bonds***



2.Taxonomy-alignment of investments **excluding sovereign bonds***



This graph represents **100%** of the total investments.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities was 20.30%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 90.61% in sustainable investments with an environmental objective that may include sustainable investments that are not aligned with the EU taxonomy.

The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 8.88% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion.

These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment.

For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach.

Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices.

Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at https://www.mirova.com/en/research/voting-and-engagement.

How did this financial product perform compared to the reference sustainable benchmark?

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **MIROVA EUROPE ENVIRONNEMENTAL EQUITY FUND**
Legal entity identifier: 2221005Z7F3MH7JCPB87

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?	
●● [X] **Yes**	●● [ ] **No**
[X] It made **sustainable investments with an environmental objective:** 79.52%	[ ] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
[X] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[X] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[ ] with a social objective
[X] It made **sustainable investments with a social objective:** 17.24%	[ ] It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to allocate the capital towards companies:

- that provide positive innovative solutions to tackle issues related to key environmental themes: renewable energy, industrial energy efficiency,

sustainable waste and water management, sustainable land use, clean transportation, green building, and

- whose economics activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the "SDGs").

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the "Taxonomy Regulation") aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria.

The alignment of the economics activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

96.77% of the Fund's net assets were aligned with sustainable investment objectives as of 31/12/2022. Alignment with the EU taxonomy was 14.69%

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

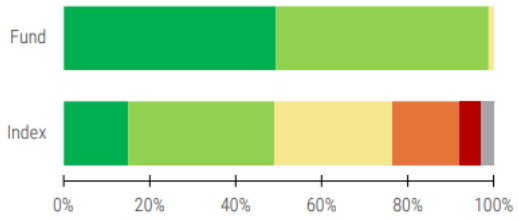
- ***How did the sustainability indicators perform?***

  Benchmark: MSCI EUROPE NET RETURN EUR INDEX

  The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund

SUSTAINABILITY OPINION BREAKDOWN*

in % of assets, cash equivalence excluded



"Committed" / "Positive" opinions

Fund 98.8%

Index 49.0%

Achievement of UN SDGs**

- Committed : Contributes very favorably to achieving the SDGs
- Positive : Contributes positively to achieving the SDGs
- Neutral : In line with some of the SDGs, but impacts are low or unquantified
- Risk : Hinders achievement of the SDGs
- Negative : Strongly opposes achievement of the SDGs
- Not followed : Not rated by either Mirova or ISS ESG

CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

in % of assets with Committed/positive opinions

	Mirova pillars	Extent to which an asset contributes to the SDGs corresponding to each pillar Fund	Index
Environment	CLIMATE STABILITY Limit greenhouse gas levels to stabilize global temperature rise under 2°C	81%	26%
	HEALTHY ECO-SYSTEMS Maintain ecologically sound landscape and seas for nature and people	54%	10%
	RESOURCE SECURITY Preserve stocks of natural resources through efficient and circular use	64%	16%
Social	BASIC NEEDS Basic services (food, water, energy, transport, health, etc.) for all	14%	17%
	WELL BEING Enhanced health education, justice and equality of opportunity for all	40%	25%
	DECENT WORK Secure socially inclusive jobs and working conditions for all	29%	16%

The United Nations adopted 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. Please see an overview relating to all SDGs (1-17) on the UN's website: www.un.org/sustainabledevelopment/sustainable-development-goals/.
This chart displays to what extent an asset contributes to the UN Sustainable Development Goals ("SDGs"). Mirova has signed an agreement with Cambridge University, based on a research partnership focusing on sustainable development themes as well as the establishment of a task force in 2013, the Investors Leaders Group. To illustrate the main sustainability impacts of our investments, six impact pillars have been developed, three environmental and three social, for each asset (as displayed on the left). The same assets may contribute to several pillars / SDGs.

The ESG Opinion is designed to assess whether the investment is compatible with the UN SDGs and is based upon the analysis of Mirova and ISS ESG, a third party.
The opinion does not guarantee a profit or protect against a loss, and does not ensure the stability or safety of the overall portfolio.
The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar). *
Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.*
Due to active management, portfolio characteristics are subject to change. References to specific securities or industries should not be considered a recommendation.
Source : Mirova
The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar).
Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

	Fund	Index
	1.5°C	2.5-3°C
Induced Emissions *(tCO_2 / million € company value)*	162.4	200.9
Avoided Emissions *(tCO_2 / million € company value)*	59.1	12.4
Coverage rate *(% of holdings analysed)*	97%	99%

In 2015, Mirova and Carbone 4 jointly developed a method* which assesses carbon data in view of the specific challenges facing a low carbon economy: Carbon Impact Analytics (CIA).
Companies are initially assessed individually according to a specific sector framework. This method focuses on two main indicators:

- "induced" emissions arising from the "lifecycle" of a company's activities, taking into account both direct emissions and those of suppliers and products
- "avoided" emissions due to improvements in energy efficiency or "green" solutions

These indicators are enhanced with an assessment of corporate policies and decarbonisation targets.
Individual company assessments are then used to calculate the fund's alignment with a global warming pathway of 1.5°C to 5°C by 2100.
For more information about our methodologies, please refer to our Mirova website www.mirova.com/en/research/demonstrating-impact.
*As of 05/31/2022, this methodology has changed. The main change concerns how we determine the temperature (which now includes a qualitative analysis of the company's decarbonization strategy), and how we display the temperature (by ranges rather than exact 0.1 precision temperatures).

Overall fund AuM help to avoid

150,442 tCO_2

equivalent to

45,588 European households
In Europe, a household emits an average of 3.3 tCO_2/year for heating and electricity

or

88,495 Cars
In Europe, a standard car emits on average around 1.7 tCO_2/year

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies.

As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

Therefore, over the reporting period, all investment in the Fund were complying with the Investment Manager's DNSH criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available,

the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question.

Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Adverse Sustainability indicator		How PAIs are taken into account by Mirova
Greenhouse gas emissions	**1. GHG emissions**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	- Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO2/kWh.
	5. Share of non-renewable energy consumption and production	- Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	- Integration in qualitative internal analysis when relevant
Biodiversity	**7. Activities negatively affecting biodiversity-sensitive areas**	- Exclusion of companies or projects significantly harming biodiversity sensitive areas - Systematic integration in qualitative internal analysis - Part of controversy analysis
Water	**8. Emissions to water**	- Integration in qualitative internal analysis when relevant
Waste	**9. Hazardous waste and radioactive waste ratio**	- Integration in qualitative internal analysis when relevant
Social and Employee matters	**10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises**	- Exclusion of companies violating UNGC and OECD principles - Systematic integration in qualitative internal analysis - Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	- Exclusion for large companies, case-by-case for small companies or projects - Systematic integration in qualitative internal analysis - Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	13. Board gender diversity	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	- Exclusion (0% sales threshold)
Additional PAI Indicators	**4. Investments in companies without carbon emission reduction initiatives**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights.

The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance.

Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible.

Therefore, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country
THERMO FISHER UN USD	Life Sciences Tools & Services	4.19%	United States

MSCI Breakdown

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation") : (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives (limited to the objective (a) as of today) is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing.

The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative.

14.69% of the Fund's net assets are aligned with EU Taxonomy as of 31/12/2022.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with EU Taxonomy[1]?

☐ Yes :

☐ In fossil gas ☐ In nuclear energy

☒ No

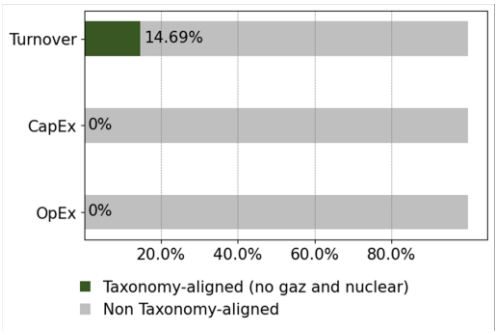
At the reporting date, based on the available reported and estimated issuer data, the management company did not identify any gas or nuclear taxonomy alignment in the investment portfolio.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

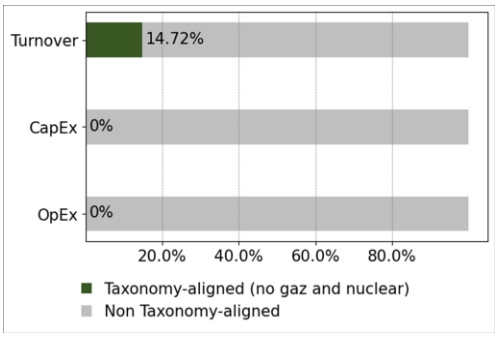
Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1.Taxonomy-alignment of investments **including sovereign bonds***



2.Taxonomy-alignment of investments **excluding sovereign bonds***



This graph represents **100%** of the total investments.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities was 7.02%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 79.52% in sustainable investments with an environmental objective that may include sustainable investments that are not aligned with the EU taxonomy.

The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 17.24% in companies that help to combat inequality or promote social cohesion, social integration and working relationships, or investment in human capital or in economically or socially disadvantaged communities, by ensuring that these investments do not significantly adversely affect any of the environmental/social objectives and that the recipient companies follow good governance practices, particularly with regard to healthy management structures, employee relations, staff compensation and tax compliance.

This is driven by a comprehensive sustainability assessment on each recipient society, which includes a review of positive impacts on three social themes: socio-economic development, health and well-being, and inclusion in diversity.

These topics are intended to identify companies that practice or practice:

- foster access to basic and sustainable services, local impact or promote advanced working conditions
- support the development of health care, healthy nutrition, knowledge education, or safety
- promote diversity and inclusion through dedicated products and services or advanced workforce-targeted practices.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in equity securities qualifying as sustainable investment.

For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach.

Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

[X] It made **sustainable investments with a social objective:** 8.24%	[ ] It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to allocate the capital towards companies:

- that deliver solutions to address environmental and nutritional challenges within the sustainable food value chain and address key sustainable

themes: food production, Ingredient and bioscience, food technology, water technology, retail and logistics and sustainable packaging, and

- whose economics activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the "SDGs")

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the "Taxonomy Regulation") aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria.

The alignment of the economics activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

97.96% of the Fund's net assets were aligned with sustainable investment objectives as of 31/12/2022. Alignment with EU Taxonomy amounted to 6.24%.

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

- ***How did the sustainability indicators perform?***

  Benchmark:MSCI WORLD NET RETURN USD

  The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

SUSTAINABILITY OPINION BREAKDOWN*

in % of assets, cash equivalence excluded

	"Committed" / "Positive" opinions
Fund	81.6%
Index	33.2%

Achievement of UN SDGs**

- Committed : Contributes very favorably to achieving the SDGs
- Positive : Contributes positively to achieving the SDGs
- Neutral : In line with some of the SDGs, but impacts are low or unquantified
- Risk : Hinders achievement of the SDGs
- Negative : Strongly opposes achievement of the SDGs
- Not followed : Not rated by either Mirova or ISS ESG

The ESG Opinion is designed to assess whether the investment is compatible with the UN SDGs and is based upon the analysis of Mirova and ISS ESG, a third party.
The opinion does not guarantee a profit or protect against a loss, and does not ensure the stability or safety of the overall portfolio.

CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

in % of assets with Committed/positive opinions

Mirova pillars		Extent to which an asset contributes to the SDGs corresponding to each pillar	
		Fund	Index
Environment	CLIMATE STABILITY Limit greenhouse gas levels to stabilize global temperature rise under 2°C	38%	17%
	HEALTHY ECO-SYSTEMS Maintain ecologically sound landscape and seas for nature and people	45%	8%
	RESOURCE SECURITY Preserve stocks of natural resources through efficient and circular use	62%	7%
Social	BASIC NEEDS Basic services (food, water, energy, transport, health, etc.) for all	25%	11%
	WELL BEING Enhanced health education, justice and equality of opportunity for all	28%	16%
	DECENT WORK Secure socially inclusive jobs and working conditions for all	6%	9%

The United Nations adopted 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. Please see an overview relating to all SDGs (1-17) on the UN's website: www.un.org/sustainabledevelopment/sustainable-development-goals/.
This chart displays to what extent an asset contributes to the UN Sustainable Development Goals ("SDGs"). Mirova has signed an agreement with Cambridge University, based on a research partnership focusing on sustainable development themes as well as the establishment of a task force in 2013, the Investors Leaders Group. To illustrate the main sustainability impacts of our investments, six impact pillars have been developed, three environmental and three social, for each asset (as displayed on the left). The same assets may contribute to several pillars / SDGs.

The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar).
Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.
* For more information on our methodologies, please refer to our Mirova website : https://www.mirova.com/en/research
**In 2015, all countries around the world agreed on 17 universal sustainable development goals (SDG) to end poverty, combat inequality and injustice and fight against climate change between now and 2030.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

	Fund	Index
	<2°C	3.5-4°C
Induced Emissions *(tCO_2 / million € company value)*	196.2	142.0
Avoided Emissions *(tCO_2 / million € company value)*	15.2	8.1
Coverage rate *(% of holdings analysed)*	86%	99%

In 2015, Mirova and Carbone 4 jointly developed a method* which assesses carbon data in view of the specific challenges facing a low carbon economy: Carbon Impact Analytics (CIA).
Companies are initially assessed individually according to a specific sector framework. This method focuses on two main indicators:

- "induced" emissions arising from the "lifecycle" of a company's activities, taking into account both direct emissions and those of suppliers and products
- "avoided" emissions due to improvements in energy efficiency or "green" solutions

These indicators are enhanced with an assessment of corporate policies and decarbonisation targets.
Individual company assessments are then used to calculate the fund's alignment with a global warming pathway of 1.5°C to 5°C by 2100.
For more information about our methodologies, please refer to our Mirova website www.mirova.com/en/research/demonstrating-impact.
*As of 05/31/2022, this methodology has changed. The main change concerns how we determine the temperature (which now includes a qualitative analysis of the company's decarbonization strategy), and how we display the temperature (by ranges rather than exact 0.1 precision temperatures).

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies.

As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question.

Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and

governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Adverse Sustainability indicator		How PAIs are taken into account by Mirova
Greenhouse gas emissions	**1. GHG emissions**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	- Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO2/kWh.
	5. Share of non-renewable energy consumption and production	- Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	- Integration in qualitative internal analysis when relevant
Biodiversity	**7. Activities negatively affecting biodiversity-sensitive areas**	- Exclusion of companies or projects significantly harming biodiversity sensitive areas - Systematic integration in qualitative internal analysis - Part of controversy analysis
Water	**8. Emissions to water**	- Integration in qualitative internal analysis when relevant
Waste	**9. Hazardous waste and radioactive waste ratio**	- Integration in qualitative internal analysis when relevant
Social and Employee matters	**10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises**	- Exclusion of companies violating UNGC and OECD principles - Systematic integration in qualitative internal analysis - Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	- Exclusion for large companies, case-by-case for small companies or projects - Systematic integration in qualitative internal analysis - Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	13. Board gender diversity	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	- Exclusion (0% sales threshold)
Additional PAI Indicators	**4. Investments in companies without carbon emission reduction initiatives**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights.

The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance.

Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible.

As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

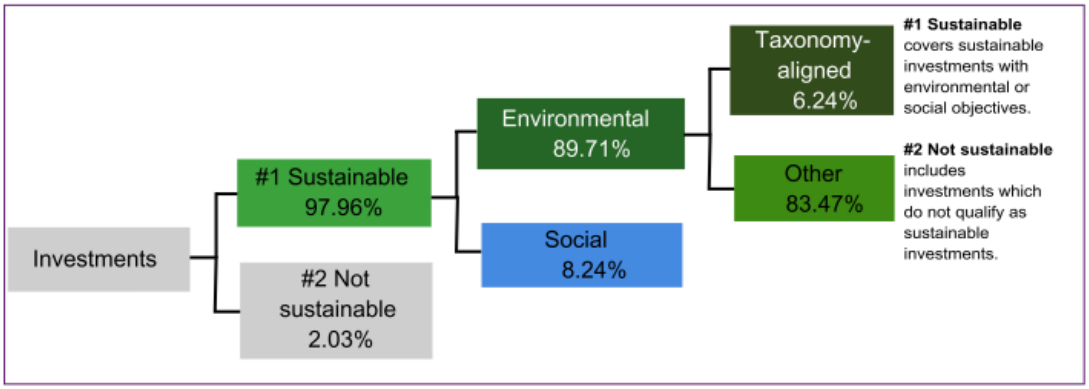
What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 97.96% of the Fund's net assets have been aligned with sustainable investment objectives as of 31/12/2022.

The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?



In which economic sectors were the investments made?

MSCI Breakdown

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation"): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives (limited to the objective (a) as of today) is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing.

The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative.

6.24% of the Fund's net assets are aligned with the EU taxonomy as of 31/12/2022.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with EU Taxonomy[1]?

☐ Yes :

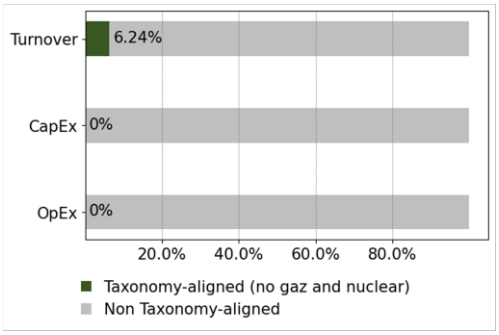
☐ In fossil gas ☐ In nuclear energy

☒ No

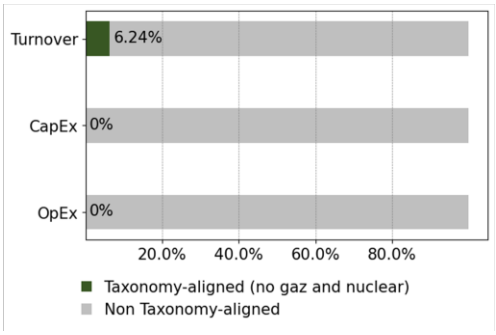
At the reporting date, based on the available reported and estimated issuer data, the management company did not identify any gas or nuclear taxonomy alignment in the investment portfolio.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1.Taxonomy-alignment of investments **including sovereign bonds***



2.Taxonomy-alignment of investments **excluding sovereign bonds***



This graph represents **100%** of the total investments.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities was 0.01%.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 89.71% in sustainable investments with an environmental objective that may include sustainable investments that are not aligned with the EU taxonomy.

The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 8.24% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion.

These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;

- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment.

For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach.

Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices.

Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including

legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at https://www.mirova.com/en/research/voting-and-engagement.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

  Not applicable

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **MIROVA FUNDS - Mirova Women Leaders Equity Fund**
Legal entity identifier: 549300P39BSWLFKWZM30

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?	
●● [X] **Yes**	●● [ ] **No**
[X] It made **sustainable investments with an environmental objective:** 29.48%	[ ] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
[X] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[X] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[ ] with a social objective
[X] It made **sustainable investments with a social objective:** 59.75%	[ ] It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to allocate the capital towards companies:

- that address opportunities related to diversity and human capital with a focus on gender diversity and women empowerment, and

- whose economics activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the "SDGs").

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the "Taxonomy Regulation") aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria.

The alignment of the economics activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

89.24% of the Fund's net assets were aligned with sustainable investment objectives as of 31/12/2022. Alignment with EU Taxonomy amounted to 7.07%.

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

Some securities selected according to the approach to Impact and ESG assessments in effect before 31/12/2022 meet the criteria for managing the risks of obstruction to the SDGs (DNSH test) and good governance practices but may have a positive contribution assessed as low or unquantifiable.

As the analysis framework has been enhanced to date, the positive contribution of certain securities has been reviewed. An adjustment of the portfolios under the conditions set out in the investment process has been made.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The United Nations adopted 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. Please see an overview relating to all SDGs (1-17) on the UN's website: www.un.org/sustainabledevelopment/sustainable-development-goals/.
This chart displays to what extent an asset contributes to the UN Sustainable Development Goals ("SDGs"). Mirova has signed an agreement with Cambridge University, based on a research partnership focusing on sustainable development themes as well as the establishment of a task force in 2013, the Investors Leaders Group. To illustrate the main sustainability impacts of our investments, six impact pillars have been developed, three environmental and three social, for each asset (as displayed on the left). The same assets may contribute to several pillars / SDGs.

The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar).
Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.
* For more information on our methodologies, please refer to our Mirova website : https://www.mirova.com/en/research
**In 2015, all countries around the world agreed on 17 universal sustainable development goals (SDG) to end poverty, combat inequality and injustice and fight against climate change between now and 2030.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies.

As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question.

Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Adverse Sustainability indicator		How PAIs are taken into account by Mirova
Greenhouse gas emissions	**1. GHG emissions**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	- Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO2/kWh.
	5. Share of non-renewable energy consumption and production	- Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	- Integration in qualitative internal analysis when relevant
Biodiversity	**7. Activities negatively affecting biodiversity-sensitive areas**	- Exclusion of companies or projects significantly harming biodiversity sensitive areas - Systematic integration in qualitative internal analysis - Part of controversy analysis
Water	**8. Emissions to water**	- Integration in qualitative internal analysis when relevant
Waste	**9. Hazardous waste and radioactive waste ratio**	- Integration in qualitative internal analysis when relevant
Social and Employee matters	**10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises**	- Exclusion of companies violating UNGC and OECD principles - Systematic integration in qualitative internal analysis - Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	- Exclusion for large companies, case-by-case for small companies or projects - Systematic integration in qualitative internal analysis - Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	13. Board gender diversity	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	- Exclusion (0% sales threshold)
Additional PAI Indicators	**4. Investments in companies without carbon emission reduction initiatives**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights.

The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance.

Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible.

As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

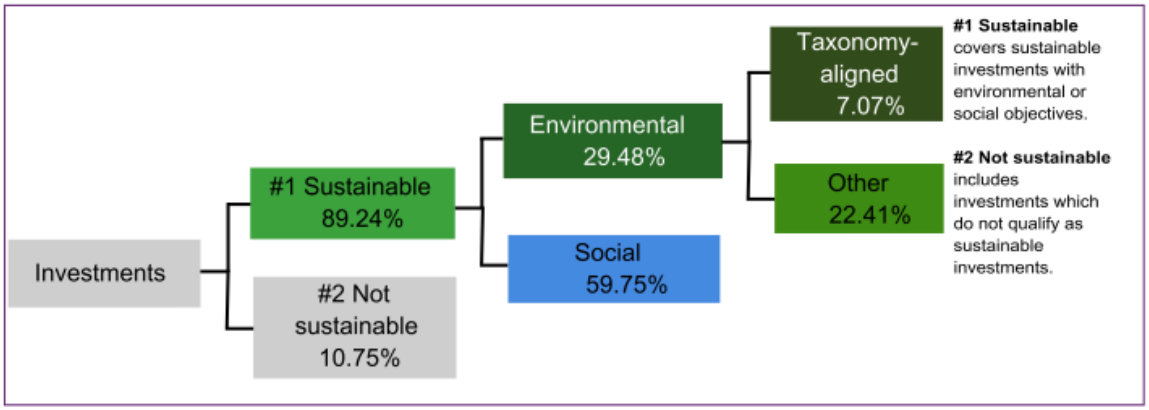
What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 89.24% of the Fund's net assets have been aligned with sustainable investment objectives as of 31/12/2022.

The Fund may use derivatives for hedging and investment purposes (authorized but very rarely used).

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?



In which economic sectors were the investments made?

SECTOR BREAKDOWN (%)	Fund	Index
Information Technology	18.0	20.2
Health Care	14.8	14.4
Financials	12.8	14.3
Industrials	11.3	10.7
Materials	8.7	4.5

Real Estate	-	2.7
Energy	-	5.7
Mutual Funds	2.4	-
Cash & cash equivalent	8.4	-

MSCI Breakdown

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation"): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives (limited to the objective (a) as of today) is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing.

The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative.

7.07% of the Fund's net assets are aligned with the EU taxonomy as of 31/12/2022.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with EU Taxonomy[1]?

☐ Yes :

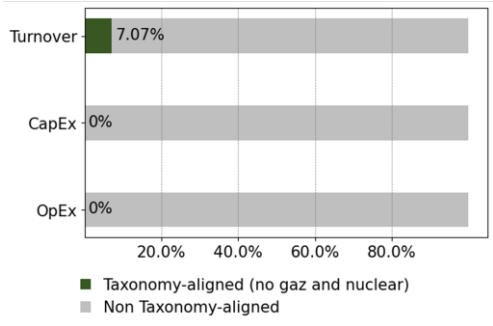
☐ In fossil gas ☐ In nuclear energy

☒ No

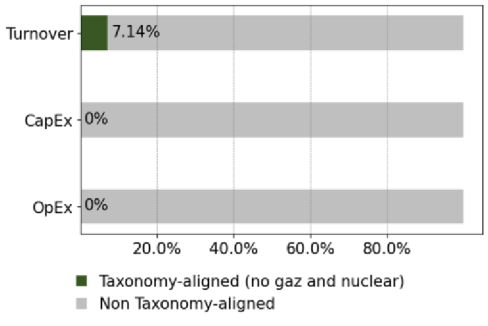
At the reporting date, based on the available reported and estimated issuer data, the management company did not identify any gas or nuclear taxonomy alignment in the investment portfolio.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1.Taxonomy-alignment of investments **including sovereign bonds***



2.Taxonomy-alignment of investments **excluding sovereign bonds***



This graph represents **100%** of the total investments.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities was 2.76%.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 29.48% in sustainable investments with an environmental objective that may include sustainable investments that are not aligned with the EU taxonomy.

The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 59.75% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion.

These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment.

For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach.

Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices.

Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at https://www.mirova.com/en/research/voting-and-engagement.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- ***How did the reference benchmark differ from a broad market index?***

  Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***

  Not applicable

  Not applicable

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **MIROVA FUNDS - Mirova Global Climate Ambition Equity Fund**
Legal entity identifier: 54930071Q8WMCP1ZLH72

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?	
●● [✖] **Yes**	●● [ ] **No**
[X] It made **sustainable investments with an environmental objective:** 37.88%	[ ] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
[X] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[X] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[ ] with a social objective
[X] It made **sustainable investments with a social objective:** 46.53%	[ ] It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to allocate the capital towards companies:

- that address opportunities linked to major sustainable themes such as biodiversity, climate, diversity human capital, health human development, and

- whose economics activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the "SDGs").

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the "Taxonomy Regulation") aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria.

The alignment of the economics activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

84.42% of the Fund's net assets were aligned with sustainable investment objectives as of 31/12/2022. Alignment with EU Taxonomy amounted to 11.84%.

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

Some securities selected according to the approach to Impact and ESG assessments in effect before 31.12.2022 meet the criteria for managing the risks of obstruction to the SDGs (DNSH test) and good governance practices but may have a positive contribution assessed as low or unquantifiable.

As the analysis framework has been enhanced to date, the positive contribution of certain securities has been reviewed. An adjustment of the portfolios under the conditions set out in the investment process has been made.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

How did the sustainability indicators perform?

Benchmark: MSCI WORLD NET TOTAL RETURN EUR INDEX

The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

SUSTAINABILITY OPINION BREAKDOWN*

in % of assets, cash equivalence excluded

	"Committed" / "Positive" opinions
Fund	88.7%
Index	33.2%

Achievement of UN SDGs**

- Committed : Contributes very favorably to achieving the SDGs
- Positive : Contributes positively to achieving the SDGs
- Neutral : In line with some of the SDGs, but impacts are low or unquantified
- Risk : Hinders achievement of the SDGs
- Negative : Strongly opposes achievement of the SDGs
- Not followed : Not rated by either Mirova or ISS ESG

The ESG Opinion is designed to assess whether the investment is compatible with the UN SDGs and is based upon the analysis of Mirova and ISS ESG, a third party.
The opinion does not guarantee a profit or protect against a loss, and does not ensure the stability or safety of the overall portfolio.

CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

in % of assets with Committed/positive opinions

Mirova pillars		Extent to which an asset contributes to the SDGs corresponding to each pillar	
		Fund	Index
Environment	CLIMATE STABILITY Limit greenhouse gas levels to stabilize global temperature rise under 2°C	40%	17%
	HEALTHY ECO-SYSTEMS Maintain ecologically sound landscape and seas for nature and people	16%	8%
	RESOURCE SECURITY Preserve stocks of natural resources through efficient and circular use	20%	7%
Social	BASIC NEEDS Basic services (food, water, energy, transport, health, etc.) for all	26%	11%
	WELL BEING Enhanced health education, justice and equality of opportunity for all	27%	16%
	DECENT WORK Secure socially inclusive jobs and working conditions for all	10%	9%

The United Nations adopted 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. Please see an overview relating to all SDGs (1-17) on the UN´s website: www.un.org/sustainabledevelopment/sustainable-development-goals/.
This chart displays to what extent an asset contributes to the UN Sustainable Development Goals ("SDGs"). Mirova has signed an agreement with Cambridge University, based on a research partnership focusing on sustainable development themes as well as the establishment of a task force in 2013, the Investors Leaders Group. To illustrate the main sustainability impacts of our investments, six impact pillars have been developed, three environmental and three social, for each asset (as displayed on the left). The same assets may contribute to several pillars / SDGs.

The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar).
Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.
* For more information on our methodologies, please refer to our Mirova website : https://www.mirova.com/en/research
**In 2015, all countries around the world agreed on 17 universal sustainable development goals (SDG) to end poverty, combat inequality and injustice and fight against climate change between now and 2030.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

	Fund	Index
	<2°C	3.5-4°C
Induced Emissions *(tCO_2 / million € company value)*	75.1	142.0
Avoided Emissions *(tCO_2 / million € company value)*	22.0	8.1
Coverage rate *(% of holdings analysed)*	98%	99%

In 2015, Mirova and Carbone 4 jointly developed a method* which assesses carbon data in view of the specific challenges facing a low carbon economy: Carbon Impact Analytics (CIA).
Companies are initially assessed individually according to a specific sector framework. This method focuses on two main indicators:

- "induced" emissions arising from the "lifecycle" of a company's activities, taking into account both direct emissions and those of suppliers and products
- "avoided" emissions due to improvements in energy efficiency or "green" solutions

These indicators are enhanced with an assessment of corporate policies and decarbonisation targets.
Individual company assessments are then used to calculate the fund's alignment with a global warming pathway of 1.5°C to 5°C by 2100.
For more information about our methodologies, please refer to our Mirova website www.mirova.com/en/research/demonstrating-impact.
*As of 05/31/2022, this methodology has changed. The main change concerns how we determine the temperature (which now includes a qualitative analysis of the company's decarbonization strategy), and how we display the temperature (by ranges rather than exact 0.1 precision temperatures).

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies.

As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question.

Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Adverse Sustainability indicator		How PAIs are taken into account by Mirova
Greenhouse gas emissions	**1. GHG emissions**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	- Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO2/kWh.
	5. Share of non-renewable energy consumption and production	- Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	- Integration in qualitative internal analysis when relevant
Biodiversity	**7. Activities negatively affecting biodiversity-sensitive areas**	- Exclusion of companies or projects significantly harming biodiversity sensitive areas - Systematic integration in qualitative internal analysis - Part of controversy analysis
Water	**8. Emissions to water**	- Integration in qualitative internal analysis when relevant
Waste	**9. Hazardous waste and radioactive waste ratio**	- Integration in qualitative internal analysis when relevant
Social and Employee matters	**10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises**	- Exclusion of companies violating UNGC and OECD principles - Systematic integration in qualitative internal analysis - Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	- Exclusion for large companies, case-by-case for small companies or projects - Systematic integration in qualitative internal analysis - Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	13. Board gender diversity	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	- Exclusion (0% sales threshold)
Additional PAI Indicators	**4. Investments in companies without carbon emission reduction initiatives**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights.

The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance.

Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible.

As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

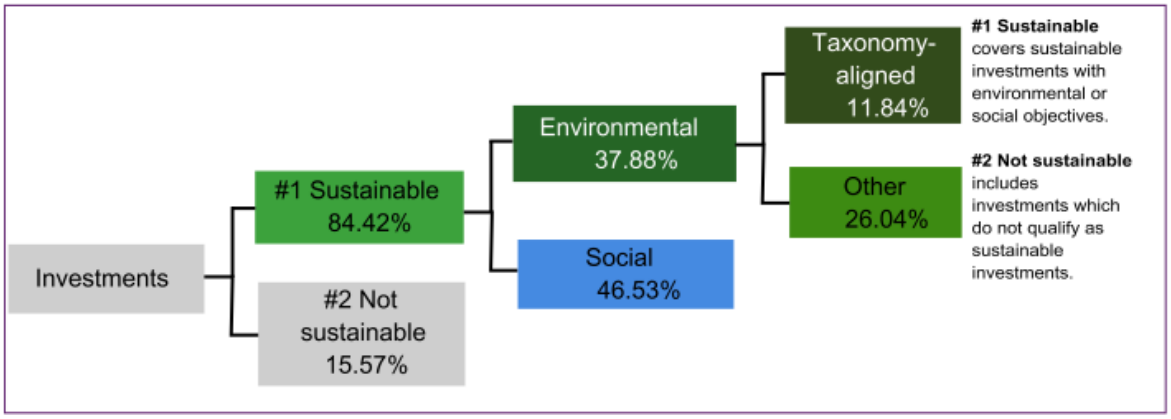
What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 84.42% of the Fund's net assets have been aligned with sustainable investment objectives as of 31/12/2022.

The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?



In which economic sectors were the investments made?

SECTOR BREAKDOWN (%)	Fund	Index
Health Care	16.9	14.4
Information Technology	15.1	20.2

MSCI Breakdown

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation"): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives (limited to the objective (a) as of today) is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing.

The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative.

11.84% of the Fund's net assets are aligned with the EU taxonomy as of 31/12/2022.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with EU Taxonomy[1]?

☐ Yes :

☐ In fossil gas ☐ In nuclear energy

☒ No

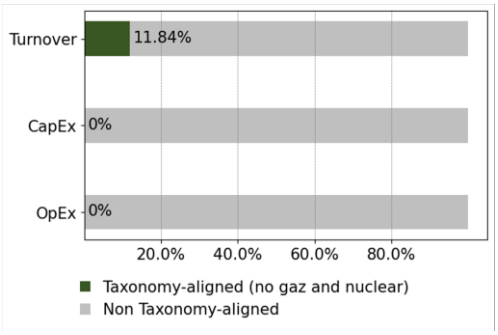
At the reporting date, based on the available reported and estimated issuer data, the management company did not identify any gas or nuclear taxonomy alignment in the investment portfolio.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

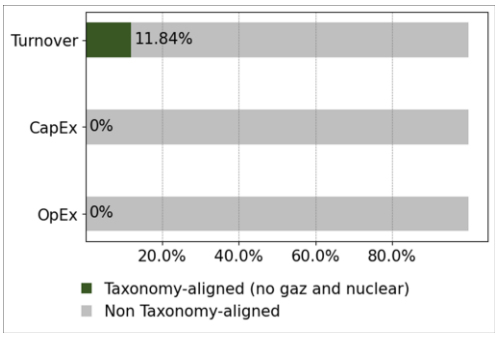
Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1.Taxonomy-alignment of investments **including sovereign bonds***



2.Taxonomy-alignment of investments **excluding sovereign bonds***



This graph represents **100%** of the total investments.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities was 6.14%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 37.88% in sustainable investments with an environmental objective that may include sustainable investments that are not aligned with the EU taxonomy.

The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 46.53% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion.

These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment.

For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach.

Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices.

Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at https://www.mirova.com/en/research/voting-and-engagement.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- ***How did the reference benchmark differ from a broad market index?***

  Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **MIROVA FUNDS - Mirova Europe Climate Ambition Equity Fund**
Legal entity identifier: 5493005ZLJ3E55E2B031

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?	
●● [X] **Yes**	●● [ ] **No**
[X] It made **sustainable investments with an environmental objective:** 41.3%	[ ] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
[X] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[X] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[ ] with a social objective
[X] It made **sustainable investments with a social objective:** 43.24%	[ ] It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The sustainable investment objective of the Fund is to allocate the capital towards companies:

- that address opportunities linked to major sustainable themes such as biodiversity, climate, diversity human capital, health human development, and

- whose economics activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the “SDGs”).

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.The Regulation (EU) 2020/852 (the “Taxonomy Regulation”) aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems. To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria. The alignment of the economics activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives. No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

84.54% of the Fund’s net assets were aligned with sustainable investment objectives as of 31/12/2022. Alignment with EU Taxonomy amounted to 9.77%.

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

Some securities selected according to the approach to Impact and ESG assessments in effect before 31.12.2022 meet the criteria for managing the risks of obstruction to the SDGs (DNSH test) and good governance practices but may have a positive contribution assessed as low or unquantifiable. As the analysis framework has been enhanced to date, the positive contribution of certain securities has been reviewed. An adjustment of the portfolios under the conditions set out in the investment process has been made.

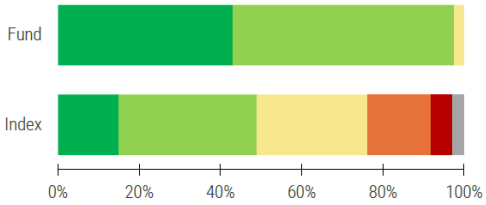
  Benchmark: MSCI EUROPE NET TOTAL RETURN EUR INDEX

  The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

SUSTAINABILITY OPINION BREAKDOWN*

in % of assets, cash equivalence excluded



"Committed" / "Positive" opinions

97.6%

49.0%

Achievement of UN SDGs**

- Committed : Contributes very favorably to achieving the SDGs
- Positive : Contributes positively to achieving the SDGs
- Neutral : In line with some of the SDGs, but impacts are low or unquantified
- Risk : Hinders achievement of the SDGs
- Negative : Strongly opposes achievement of the SDGs
- Not followed : Not rated by either Mirova or ISS ESG

The ESG Opinion is designed to assess whether the investment is compatible with the UN SDGs and is based upon the analysis of Mirova and ISS ESG, a third party.
The opinion does not guarantee a profit or protect against a loss, and does not ensure the stability or safety of the overall portfolio.

CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

in % of assets with Committed/positive opinions

	Mirova pillars	Extent to which an asset contributes to the SDGs corresponding to each pillar Fund	Index
Environment	CLIMATE STABILITY Limit greenhouse gas levels to stabilize global temperature rise under 2°C	60%	26%
	HEALTHY ECO-SYSTEMS Maintain ecologically sound landscape and seas for nature and people	33%	10%
	RESOURCE SECURITY Preserve stocks of natural resources through efficient and circular use	39%	16%
Social	BASIC NEEDS Basic services (food, water, energy, transport, health, etc.) for all	24%	17%
	WELL BEING Enhanced health education, justice and equality of opportunity for all	33%	25%
	DECENT WORK Secure socially inclusive jobs and working conditions for all	25%	16%

The United Nations adopted 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. Please see an overview relating to all SDGs (1-17) on the UN´s website: www.un.org/sustainabledevelopment/sustainable-development-goals/.
This chart displays to what extent an asset contributes to the UN Sustainable Development Goals ("SDGs"). Mirova has signed an agreement with Cambridge University, based on a research partnership focusing on sustainable development themes as well as the establishment of a task force in 2013, the Investors Leaders Group. To illustrate the main sustainability impacts of our investments, six impact pillars have been developed, three environmental and three social, for each asset (as displayed on the left). The same assets may contribute to several pillars / SDGs.

The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar).
Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.
* For more information on our methodologies, please refer to our Mirova website : https://www.mirova.com/en/research
**In 2015, all countries around the world agreed on 17 universal sustainable development goals (SDG) to end poverty, combat inequality and injustice and fight against climate change between now and 2030.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

	Fund	Index
	<2°C	2.5-3°C
Induced Emissions *(tCO_2 / million € company value)*	110.6	200.9
Avoided Emissions *(tCO_2 / million € company value)*	25.5	12.4
Coverage rate *(% of holdings analysed)*	99%	99%

In 2015, Mirova and Carbone 4 jointly developed a method* which assesses carbon data in view of the specific challenges facing a low carbon economy: Carbon Impact Analytics (CIA).
Companies are initially assessed individually according to a specific sector framework. This method focuses on two main indicators:

- "induced" emissions arising from the "lifecycle" of a company's activities, taking into account both direct emissions and those of suppliers and products
- "avoided" emissions due to improvements in energy efficiency or "green" solutions

These indicators are enhanced with an assessment of corporate policies and decarbonisation targets.
Individual company assessments are then used to calculate the fund's alignment with a global warming pathway of 1.5°C to 5°C by 2100.
For more information about our methodologies, please refer to our Mirova website www.mirova.com/en/research/demonstrating-impact.
*As of 05/31/2022, this methodology has changed. The main change concerns how we determine the temperature (which now includes a qualitative analysis of the company's decarbonization strategy), and how we display the temperature (by ranges rather than exact 0.1 precision temperatures).

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies.

As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question.

Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and

governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Adverse Sustainability indicator		How PAIs are taken into account by Mirova
Greenhouse gas emissions	**1. GHG emissions**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	- Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO2/kWh.
	5. Share of non-renewable energy consumption and production	- Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	- Integration in qualitative internal analysis when relevant
Biodiversity	**7. Activities negatively affecting biodiversity-sensitive areas**	- Exclusion of companies or projects significantly harming biodiversity sensitive areas - Systematic integration in qualitative internal analysis - Part of controversy analysis
Water	**8. Emissions to water**	- Integration in qualitative internal analysis when relevant
Waste	**9. Hazardous waste and radioactive waste ratio**	- Integration in qualitative internal analysis when relevant
Social and Employee matters	**10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises**	- Exclusion of companies violating UNGC and OECD principles - Systematic integration in qualitative internal analysis - Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	- Exclusion for large companies, case-by-case for small companies or projects - Systematic integration in qualitative internal analysis - Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	13. Board gender diversity	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	- Exclusion (0% sales threshold)
Additional PAI Indicators	**4. Investments in companies without carbon emission reduction initiatives**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights.

The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance.

Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible.

As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country

MSCI Breakdown

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation"): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives (limited to the objective (a) as of today) is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing.

The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative.

9.77% of the Fund's net assets are aligned with the EU taxonomy as of 31/12/2022.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

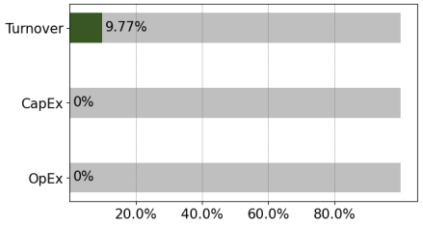
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

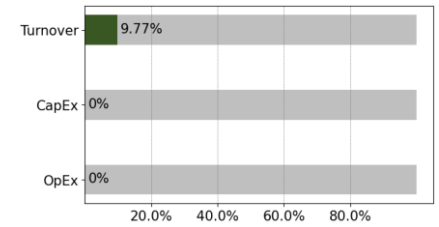
Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including sovereign bonds***



2. Taxonomy-alignment of investments **excluding sovereign bonds***



For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities was 3.34%.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 41.30% in sustainable investments with an environmental objective that may include sustainable investments that are not aligned with the EU taxonomy.

The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 43.24% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion.

These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment.

For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach.

Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of

view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices.

Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at https://www.mirova.com/en/research/voting-and-engagement.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- ***How did the reference benchmark differ from a broad market index?***

  Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***

  Not applicable

- ***How did this financial product perform compared with the reference benchmark?***

  Not applicable

- ***How did this financial product perform compared with the broad market index?***

  Not applicable

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **MIROVA FUNDS - Mirova US Climate Ambition Equity Fund**
Legal entity identifier: 549300CIVGU05YDKR138

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?	
☒ **Yes**	☐ **No**
☒ It made **sustainable investments with an environmental objective:** 33.91%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☒ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☒ It made **sustainable investments with a social objective:** 37.92%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to allocate the capital towards companies:

- that address opportunities linked to major sustainable themes such as biodiversity, climate, diversity human capital, health human development, and

- whose economics activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the "SDGs").

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the "Taxonomy Regulation") aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria.

The alignment of the economics activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

71.83% of the Fund's net assets were aligned with sustainable investment objectives as of 31/12/2022. Alignment with EU Taxonomy amounted to 7.16%.

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

Some securities selected according to the approach to Impact and ESG assessments in effect before 31.12.2022 meet the criteria for managing the risks of obstruction to the SDGs (DNSH test) and good governance practices but may have a positive contribution assessed as low or unquantifiable.

As the analysis framework has been enhanced to date, the positive contribution of certain securities has been reviewed. An adjustment of the portfolios under the conditions set out in the investment process has been made.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

- ***How did the sustainability indicators perform?***

  Benchmark: S&P 500 (C) NET TOTAL RETURN USD

  The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

SUSTAINABILITY OPINION BREAKDOWN*

in % of assets, cash equivalence excluded

	"Committed" / "Positive" opinions
Fund	81.9%
Index	33.2%

Achievement of UN SDGs**

- Committed : Contributes very favorably to achieving the SDGs
- Positive : Contributes positively to achieving the SDGs
- Neutral : In line with some of the SDGs, but impacts are low or unquantified
- Risk : Hinders achievement of the SDGs
- Negative : Strongly opposes achievement of the SDGs
- Not followed : Not rated by either Mirova or ISS ESG

The ESG Opinion is designed to assess whether the investment is compatible with the UN SDGs and is based upon the analysis of Mirova and ISS ESG, a third party.
The opinion does not guarantee a profit or protect against a loss, and does not ensure the stability or safety of the overall portfolio.

CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

in % of assets with Committed/positive opinions

	Mirova pillars	Extent to which an asset contributes to the SDGs corresponding to each pillar	
		Fund	Index
Environment	CLIMATE STABILITY Limit greenhouse gas levels to stabilize global temperature rise under 2°C	34%	17%
	HEALTHY ECO-SYSTEMS Maintain ecologically sound landscape and seas for nature and people	29%	8%
	RESOURCE SECURITY Preserve stocks of natural resources through efficient and circular use	35%	7%
Social	BASIC NEEDS Basic services (food, water, energy, transport, health, etc.) for all	29%	11%
	WELL BEING Enhanced health education, justice and equality of opportunity for all	39%	16%
	DECENT WORK Secure socially inclusive jobs and working conditions for all	20%	9%

The United Nations adopted 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. Please see an overview relating to all SDGs (1-17) on the UN's website: www.un.org/sustainabledevelopment/sustainable-development-goals/.
This chart displays to what extent an asset contributes to the UN Sustainable Development Goals ("SDGs"). Mirova has signed an agreement with Cambridge University, based on a research partnership focusing on sustainable development themes as well as the establishment of a task force in 2013, the Investors Leaders Group. To illustrate the main sustainability impacts of our investments, six impact pillars have been developed, three environmental and three social, for each asset (as displayed on the left). The same assets may contribute to several pillars / SDGs.

The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar).
Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.
* For more information on our methodologies, please refer to our Mirova website : https://www.mirova.com/en/research
**In 2015, all countries around the world agreed on 17 universal sustainable development goals (SDG) to end poverty, combat inequality and injustice and fight against climate change between now and 2030.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

	Fund	Index
	<2°C	3.5-4°C
Induced Emissions *(tCO_2 / million € company value)*	60.6	142.0
Avoided Emissions *(tCO_2 / million € company value)*	18.2	8.1
Coverage rate *(% of holdings analysed)*	100%	99%

In 2015, Mirova and Carbone 4 jointly developed a method* which assesses carbon data in view of the specific challenges facing a low carbon economy: Carbon Impact Analytics (CIA).
Companies are initially assessed individually according to a specific sector framework. This method focuses on two main indicators:

- "induced" emissions arising from the "lifecycle" of a company's activities, taking into account both direct emissions and those of suppliers and products
- "avoided" emissions due to improvements in energy efficiency or "green" solutions

These indicators are enhanced with an assessment of corporate policies and decarbonisation targets.
Individual company assessments are then used to calculate the fund's alignment with a global warming pathway of 1.5°C to 5°C by 2100.
For more information about our methodologies, please refer to our Mirova website www.mirova.com/en/research/demonstrating-impact.
*As of 05/31/2022, this methodology has changed. The main change concerns how we determine the temperature (which now includes a qualitative analysis of the company's decarbonization strategy), and how we display the temperature (by ranges rather than exact 0.1 precision temperatures).

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and

practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies.

As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question.

Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Adverse Sustainability indicator		How PAIs are taken into account by Mirova
Greenhouse gas emissions	**1. GHG emissions**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	- Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO2/kWh.
	5. Share of non-renewable energy consumption and production	- Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	- Integration in qualitative internal analysis when relevant
Biodiversity	**7. Activities negatively affecting biodiversity-sensitive areas**	- Exclusion of companies or projects significantly harming biodiversity sensitive areas - Systematic integration in qualitative internal analysis - Part of controversy analysis
Water	**8. Emissions to water**	- Integration in qualitative internal analysis when relevant
Waste	**9. Hazardous waste and radioactive waste ratio**	- Integration in qualitative internal analysis when relevant
Social and Employee matters	**10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises**	- Exclusion of companies violating UNGC and OECD principles - Systematic integration in qualitative internal analysis - Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	- Exclusion for large companies, case-by-case for small companies or projects - Systematic integration in qualitative internal analysis - Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	13. Board gender diversity	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	- Exclusion (0% sales threshold)
Additional PAI Indicators	**4. Investments in companies without carbon emission reduction initiatives**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights.

The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance.

Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible.

As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country

The displayed country is the country of risk

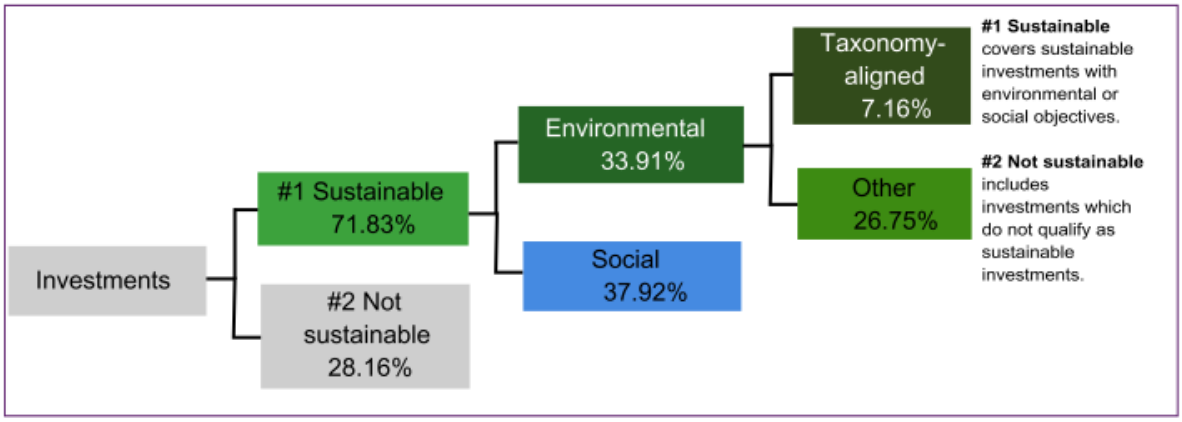
What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 71.83% of the Fund's net assets have been aligned with sustainable investment objectives as of 31/12/2022.

The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?



In which economic sectors were the investments made?

SECTOR BREAKDOWN (%)	Fund	Index
Information Technology	20.5	25.7
Health Care	17.4	15.8
Industrials	16.3	8.7
Financials	11.2	11.7

Real Estate	5.3	2.7
Consumer Staples	4.5	7.2
Communication Services	4.4	7.3
Materials	0.6	2.7
Energy	-	5.2
Cash & cash equivalent	3.5	-

MSCI Breakdown

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation"): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives (limited to the objective (a) as of today) is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing.

The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative.

7.16% of the Fund's net assets are aligned with the EU taxonomy as of 31/12/2022.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with EU Taxonomy[1]?

☐ Yes :

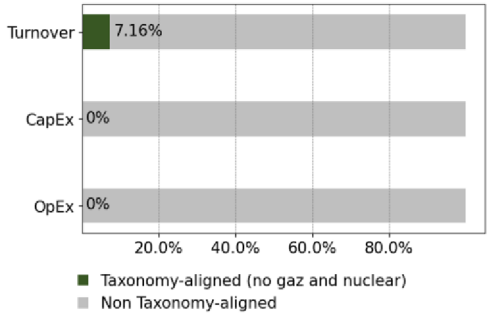
☐ In fossil gas ☐ In nuclear energy

☒ No

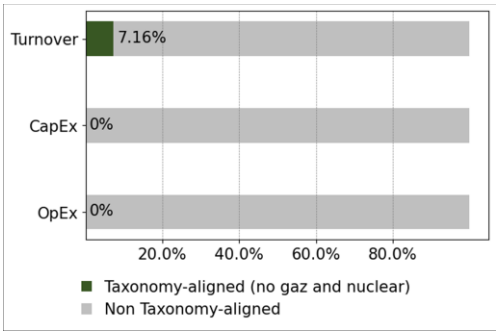
At the reporting date, based on the available reported and estimated issuer data, the management company did not identify any gas or nuclear taxonomy alignment in the investment portfolio.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1.Taxonomy-alignment of investments **including sovereign bonds***



2.Taxonomy-alignment of investments **excluding sovereign bonds***



This graph represents **100%** of the total investments.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities was 5.67%.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 33.91% in sustainable investments with an environmental objective that may include sustainable investments that are not aligned with the EU taxonomy.

The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 37.92% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion.

These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment.

For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach.

Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices.

Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at https://www.mirova.com/en/research/voting-and-engagement.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **MIROVA FUNDS - Mirova Global Green Bond Fund**
Legal entity identifier: 2221002Y14BV82OF3N65

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?	
●● [X] **Yes**	●● [ ] **No**
[X] It made **sustainable investments with an environmental objective:** 93.86%	[ ] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
[X] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[X] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[ ] with a social objective
[X] It made **sustainable investments with a social objective:** 0.66%	[ ] It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to invest in:

- green bonds, (and/or social, green and social bonds) issued by corporate issuers, banks, supranational entities, development banks, agencies, regions

and states whose purpose is to finance projects with a positive environmental and/or social impacts;and/or

- bonds issued corporate issuers whose economics activities contribute to the sustainable transition throughout their activities or services (i.e pure players in green and social projects) and to the achievement of one or more of the United Nations Sustainable Development Goals (the “SDGs”).

Green bonds are bonds that have an environmental impact insofar as they finance projects related to the environmental transition.

Social bonds are use of proceeds bonds that raise funds for new and existing socially sound and sustainable projects that achieve greater social benefits.

The qualification of a green or social bond is the result of an internal analysis process by the Investment Manager based on four criteria, derived from both Green Bonds Principles and Social as defined by the ICMA (International Capital Market Association) :

- use of the proceeds: the legal documentation when issuing the bond must specify that use of the funds will enable the financing or refinancing of projects with environmental/ social benefits.

- process for project evaluation and selection: the issuer should communicate the environmental / social sustainability objectives of the projects and the eligibility criteria.

- management of proceeds: The net proceeds of the Green / Social Bond, or an amount equal to these net proceeds, should be credited to a sub-account, moved to a sub-portfolio or otherwise tracked by the issuer in an appropriate manner, and attested to by the issuer in a formal internal process linked to the issuer’s lending and investment operations for green / social projects.

- reporting: The issuer must undertake to provide regular reporting on the use of the funds in order for the bond to be considered green / social. In addition to the above analysis, the Investment Manager uses additional criteria to define eligibility of Green / Social Bonds which include notably :

- evaluation of the company's general practices or environmental and social risk management throughout the life cycle of the financed projects;

- assessment of the environmental impact of the project aiming at identifying and investing only in project with significant positive environmental impact.

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the “Taxonomy Regulation”) aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in bonds issued by corporates or in use-of proceeds bonds which proceeds will be applied to finance) economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c)

the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria.

The alignment of the proceeds of the green bond used to finance economics activities or the economics activities of the issuer with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

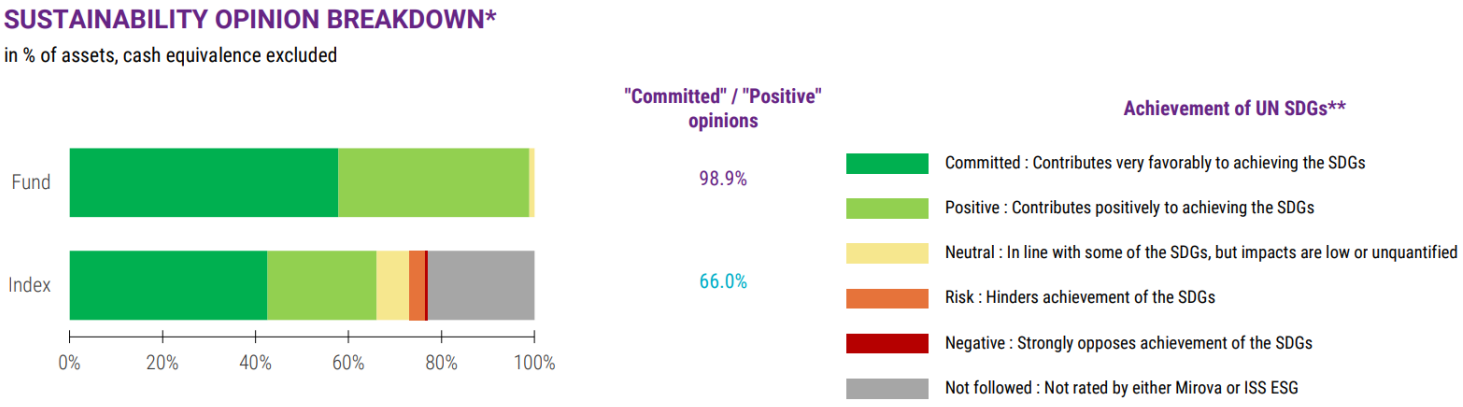
94.53% of the Fund's net assets were aligned with sustainable investment objectives as of 31/12/2022. Alignment with EU Taxonomy amounted to 14.13%.

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

How did the sustainability indicators perform?

There is no reference index for this fund



CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

in % of assets with Committed/positive opinions

Mirova pillars		Extent to which an asset contributes to the SDGs corresponding to each pillar	
		Fund	Index
Environment	CLIMATE STABILITY Limit greenhouse gas levels to stabilize global temperature rise under 2°C	87% 61%

	WELL BEING Enhanced health education, justice and equality of opportunity for all	11% 6%	
	DECENT WORK Secure socially inclusive jobs and working conditions for all	6% 4%	

The United Nations adopted 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. Please see an overview relating to all SDGs (1-17) on the UN's website: www.un.org/sustainabledevelopment/sustainable-development-goals/.
This chart displays to what extent an asset contributes to the UN Sustainable Development Goals ("SDGs"). Mirova has signed an agreement with Cambridge University, based on a research partnership focusing on sustainable development themes as well as the establishment of a task force in 2013, the Investors Leaders Group. To illustrate the main sustainability impacts of our investments, six impact pillars have been developed, three environmental and three social, for each asset (as displayed on the left). The same assets may contribute to several pillars / SDGs.

The ESG Opinion is designed to assess whether the investment is compatible with the UN SDGs and is based upon the analysis of Mirova and ISS ESG, a third party.
The opinion does not guarantee a profit or protect against a loss, and does not ensure the stability or safety of the overall portfolio.
The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar). *
Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.*
Due to active management, portfolio characteristics are subject to change. References to specific securities or industries should not be considered a recommendation.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

	Fund	Index
	1.5°C	1.5°C
Induced Emissions *(tCO_2 / million € company value)*	202.3	157.0
Avoided Emissions *(tCO_2 / million € company value)*	550.7	495.6
Coverage rate *(% of holdings analysed)*	78%	84%

In 2015, Mirova and Carbone 4 jointly developed a method* which assesses carbon data in view of the specific challenges facing a low carbon economy: Carbon Impact Analytics (CIA).
Companies are initially assessed individually according to a specific sector framework. This method focuses on two main indicators:

- "induced" emissions arising from the "lifecycle" of a company's activities, taking into account both direct emissions and those of suppliers and products
- "avoided" emissions due to improvements in energy efficiency or "green" solutions

These indicators are enhanced with an assessment of corporate policies and decarbonisation targets.
Individual company assessments are then used to calculate the fund's alignment with a global warming pathway of 1.5°C to 5°C by 2100.
For more information about our methodologies, please refer to our Mirova website www.mirova.com/en/research/demonstrating-impact.
*As of 05/31/2022, this methodology has changed. The main change concerns how we determine the temperature (which now includes a qualitative analysis of the company's decarbonization strategy), and how we display the temperature (by ranges rather than exact 0.1 precision temperatures).

Overall fund AuM help to avoid

420,300 tCO_2

equivalent to

127,364 European households
In Europe, a household emits an average of 3.3 tCO_2/year for heating and electricity

or

247,235 Cars
In Europe, a standard car emits on average around 1.7 tCO_2/year

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from issuers' activities and practices and assesses the quality of the issuer's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies.

As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which green bonds financing economic activities are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question.

Adverse impacts are prioritized according to the specificities of sectors of each issuer or project financed by the green bond considered for investment by using a combination of criteria based on:

- analysis of the issuer's exposure or project financed by the bond to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the issuer's exposure or project financed by the bond to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the issuer's footprint (or footprint of the project financed by the bond) on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the issuer's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the investment's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Adverse Sustainability indicator		How PAIs are taken into account by Mirova
Greenhouse gas emissions	**1. GHG emissions**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	- Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO2/kWh.
	5. Share of non-renewable energy consumption and production	- Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	- Integration in qualitative internal analysis when relevant
Biodiversity	**7. Activities negatively affecting biodiversity-sensitive areas**	- Exclusion of companies or projects significantly harming biodiversity sensitive areas - Systematic integration in qualitative internal analysis - Part of controversy analysis
Water	**8. Emissions to water**	Integration in qualitative internal analysis when relevant
Waste	**9. Hazardous waste and radioactive waste ratio**	- Integration in qualitative internal analysis when relevant
Social and Employee matters	**10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises**	- Exclusion of companies violating UNGC and OECD principles - Systematic integration in qualitative internal analysis - Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	- Exclusion for large companies, case-by-case for small companies or projects - Systematic integration in qualitative internal analysis - Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	13. Board gender diversity	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	- Exclusion (0% sales threshold)
Additional PAI Indicators	**4. Investments in companies without carbon emission reduction initiatives**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights.

The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance.

Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible.

As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country
OBL 0% 10-25*	Fixed-rate bond	2.89%	Germany

**Green Bonds*

Please note that the name of the investment and the percentage of assets may differ from the ones shown in the portfolio. The displayed country is the country of risk

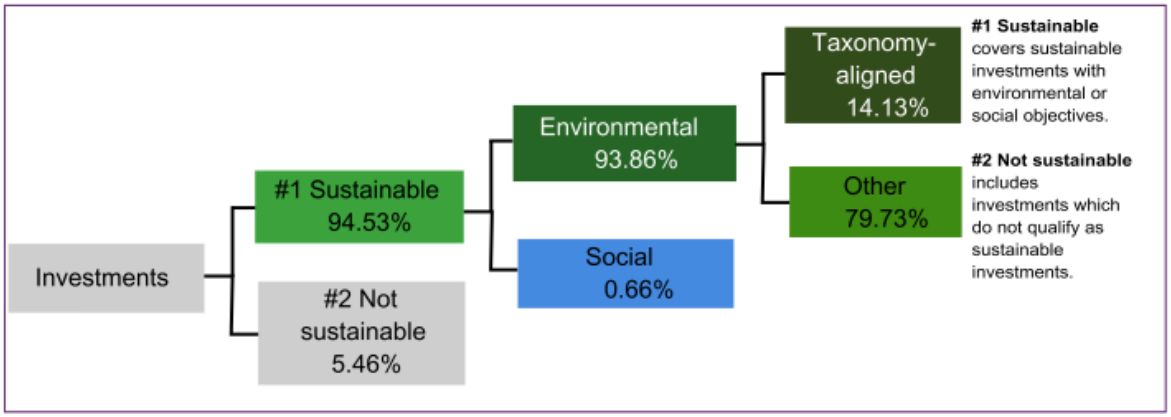
What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 94.53% of the Fund's net assets have been aligned with sustainable investment objectives as of 31/12/2022.

The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?



In which economic sectors were the investments made?

BREAKDOWN BY TYPE OF ISSUER	Fund %	Index %	Fund Modified duration	Index Modified duration
Government	20.5	20.4	2.2	2.5
Corporates	59.4	41.4	3.0	2.1

Agencies and Supranational	14.6	33.7	1.2	2.1
Cash & cash equivalent	5.5	0.0	0.0	0.0

BCLASS Nomenclature. Bond futures are embedded in government bonds

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation"): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives (limited to the objective (a) as of today) is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing.

The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative.

14.13% of the Fund's net assets are aligned with the EU taxonomy as of 31/12/2022.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with EU Taxonomy[1]?

☐ Yes :

☐ In fossil gas ☐ In nuclear energy

☒ No

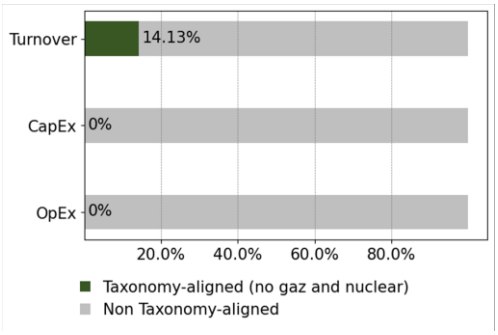
At the reporting date, based on the available reported and estimated issuer data, the management company did not identify any gas or nuclear taxonomy alignment in the investment portfolio.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

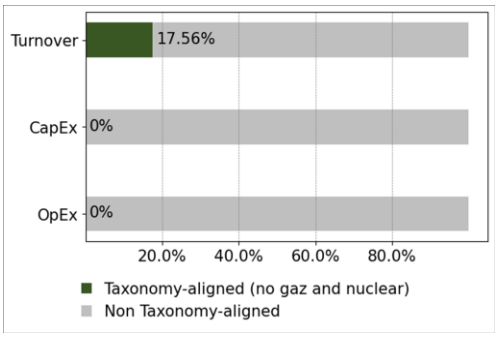
Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1.Taxonomy-alignment of investments **including sovereign bonds***



2.Taxonomy-alignment of investments **excluding sovereign bonds***



This graph represents **100%** of the total investments.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities was 1.51%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 93.86% in sustainable investments with an environmental objective that may include sustainable investments that are not aligned with the EU taxonomy.

The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives.

This is affected by performing an overall sustainability assessment on each investment, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

These themes aim at identifying project financing activities (or issuers which activities or practices):

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 0.66% in bonds financing activities that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the issuance or issuer follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion.

These themes aim at identifying project financing activities (or issuers which activities or practices):

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment.

For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach.

Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices.

Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at https://www.mirova.com/en/research/voting-and-engagement.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- ***How did the reference benchmark differ from a broad market index?***

  Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***

  Not applicable

- ***How did this financial product perform compared with the reference benchmark?***

  Not applicable

- ***How did this financial product perform compared with the broad market index?***

  Not applicable

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **MIROVA FUNDS - Mirova Euro Green and Sustainable Bond Fund**
Legal entity identifier: 549300MAEYDPR2I2EW45

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?	
●● [X] **Yes**	●● [ ] **No**
[X] It made **sustainable investments with an environmental objective:** 89.68%	[ ] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
[X] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[X] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[ ] with a social objective
[X] It made **sustainable investments with a social objective:** 6.45%	[ ] It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to invest in:

- use of proceeds bonds issued by corporate issuers, sovereign, or agencies whose purpose is to finance projects with a positive environmental and/or social impacts (green, social, green and social bonds); and/or

- conventional bonds from corporate issuers whose economics activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the "SDGs").

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the "Taxonomy Regulation") aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in bonds issued by corporates or in use-of proceeds bonds which proceeds will be applied to finance) economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria.

The alignment of the economics activities of the issuer or the project to be financed by the use of proceeds bonds with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

96.13% of the Fund's net assets were aligned with sustainable investment objectives as of 31/12/2022. Alignment with EU Taxonomy amounted to 8.80%.

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

How did the sustainability indicators perform?

Benchmark: BLOOMBERG EUROAGG 500 TOTAL RETURN INDEX VALUE UNHEDGED EUR

The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

	Fund	Index
	1.5°C	2-2.5°C
Induced Emissions *(tCO_2 / million € company value)*	248.4	145.1
Avoided Emissions *(tCO_2 / million € company value)*	363.7	29.4
Coverage rate *(% of holdings analysed)*	77%	92%

In 2015, Mirova and Carbone 4 jointly developed a method* which assesses carbon data in view of the specific challenges facing a low carbon economy: Carbon Impact Analytics (CIA).
Companies are initially assessed individually according to a specific sector framework. This method focuses on two main indicators:

- "induced" emissions arising from the "lifecycle" of a company's activities, taking into account both direct emissions and those of suppliers and products
- "avoided" emissions due to improvements in energy efficiency or "green" solutions

These indicators are enhanced with an assessment of corporate policies and decarbonisation targets.
Individual company assessments are then used to calculate the fund's alignment with a global warming pathway of 1.5°C to 5°C by 2100.

	Fund	Index
Committed	56.5	24.8
Positive	43.5	18.1
Neutral	-	12.4
Risk	-	0.4
Negative	-	0.1
Not followed	-	44.1

The ESG Opinion is designed to assess whether the investment is compatible with the UN SDGs and is based upon the analysis of Mirova and ISS ESG, a third party.
The opinion does not guarantee a profit or protect against a loss, and does not ensure the stability or safety of the overall portfolio.

CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

in % of assets with Committed/positive opinions

Mirova pillars		Extent to which an asset contributes to the SDGs corresponding to each pillar	
		Fund	Index
Environment	CLIMATE STABILITY Limit greenhouse gas levels to stabilize global temperature rise under 2°C	77%	12%
	HEALTHY ECO-SYSTEMS Maintain ecologically sound landscape and seas for nature and people	42%	5%
	RESOURCE SECURITY Preserve stocks of natural resources through efficient and circular use	34%	5%
Social	BASIC NEEDS Basic services (food, water, energy, transport, health, etc.) for all	23%	9%
	WELL BEING Enhanced health education, justice and equality of opportunity for all	19%	5%
	DECENT WORK Secure socially inclusive jobs and working conditions for all	11%	4%

The United Nations adopted 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. Please see an overview relating to all SDGs (1-17) on the UN's website: www.un.org/sustainabledevelopment/sustainable-development-goals/.
This chart displays to what extent an asset contributes to the UN Sustainable Development Goals ("SDGs"). Mirova has signed an agreement with Cambridge University, based on a research partnership focusing on sustainable development themes as well as the establishment of a task force in 2013, the Investors Leaders Group. To illustrate the main sustainability impacts of our investments, six impact pillars have been developed, three environmental and three social, for each asset (as displayed on the left). The same assets may contribute to several pillars / SDGs.

The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar).
Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.
* For more information on our methodologies, please refer to our Mirova website : https://www.mirova.com/en/research
**In 2015, all countries around the world agreed on 17 universal sustainable development goals (SDG) to end poverty, combat inequality and injustice and fight against climate change between now and 2030.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from issuers' activities and practices and assesses the quality of the issuer's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies.

As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which issuers whose economic activities are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question.

Adverse impacts are prioritized according to the specificities of sectors and business models of issuers or project financed by the use of proceeds bond considered for investment by using a combination of criteria based on:

- analysis of the issuer's exposure or project financed by the bond to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the issuer's exposure or project financed by the bond to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the issuer's footprint (or footprint of the project financed by the bond) on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the issuer's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the investment's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Adverse Sustainability indicator		How PAIs are taken into account by Mirova
Greenhouse gas emissions	**1. GHG emissions**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	- Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO2/kWh.
	5. Share of non-renewable energy consumption and production	- Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	- Integration in qualitative internal analysis when relevant
Biodiversity	**7. Activities negatively affecting biodiversity-sensitive areas**	- Exclusion of companies or projects significantly harming biodiversity sensitive areas - Systematic integration in qualitative internal analysis - Part of controversy analysis
Water	**8. Emissions to water**	- Integration in qualitative internal analysis when relevant
Waste	**9. Hazardous waste and radioactive waste ratio**	- Integration in qualitative internal analysis when relevant
Social and Employee matters	**10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises**	- Exclusion of companies violating UNGC and OECD principles - Systematic integration in qualitative internal analysis - Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	- Exclusion for large companies, case-by-case for small companies or projects - Systematic integration in qualitative internal analysis - Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	13. Board gender diversity	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	- Exclusion (0% sales threshold)
Additional PAI Indicators	**4. Investments in companies without carbon emission reduction initiatives**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights.

The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance.

Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises, or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible.

As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country
MEX 1.350% 09-27*	Fixed-rate bond	3.4%	Mexico
BTPS 1.500% 04-45*	Fixed-rate bond	3.32%	Italy
EU 0.400% 02-37*	Fixed-rate bond	2.76%	Belgium
KOREA 0% 10-26*	Fixed-rate bond	2.69%	South Korea
FRTR 1.750% 06-39*	Fixed-rate bond	2.62%	France
SLOREP 0.125% 07-31*	Fixed-rate bond	2.51%	Slovenia
REPHUN 1.750% 06-35*	Fixed-rate bond	2.21%	Hungary
IRISH 1.350% 03-31*	Fixed-rate bond	2.16%	Ireland
SPGB 1.000% 07-42*	Fixed-rate bond	1.99%	Spain
CAF 0.625% 11-26*	Fixed-rate bond	1.8%	Venezuela

CHILE 1.250% 01-40*	Fixed-rate bond	1.57%	Chile
BGB 1.250% 04-33*	Fixed-rate bond	1.53%	Belgium
RAGB 1.850% 05-49*	Fixed-rate bond	1.51%	Austria
VDP 1.750% 05-31*	Fixed-rate bond	1.44%	France
RESFER 1.000% 11-31*	Fixed-rate bond	1.35%	France

**Green Bonds*

Please note that the name of the investment and the percentage of assets may differ from the ones shown in the portfolio.

The displayed country is the country of risk

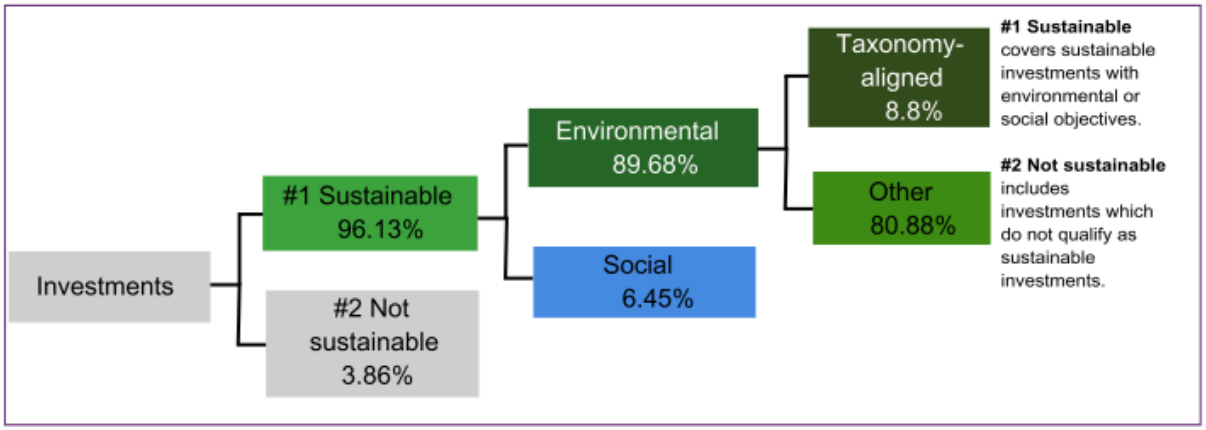
What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 96.13% of the Fund's net assets have been aligned with sustainable investment objectives as of 31/12/2022.

The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?



In which economic sectors were the investments made?

BREAKDOWN BY TYPE OF ISSUER	Fund	Index	Fund	Index
	%		*Modified duration*	
Government	27.5	57.3	2.2	4.0

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation"): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives (limited to the objective (a) as of today) is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing.

The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative.

8.80% of the Fund's net assets are aligned with the EU taxonomy as of 31/12/2022.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with EU Taxonomy[1]?

☐ Yes :

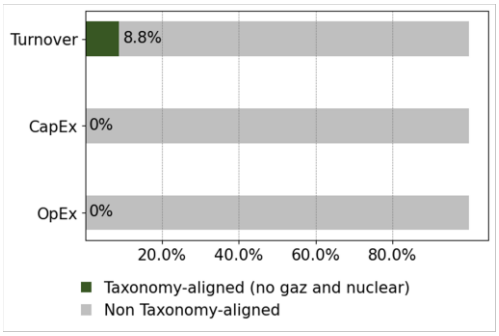
☐ In fossil gas ☐ In nuclear energy

☒ No

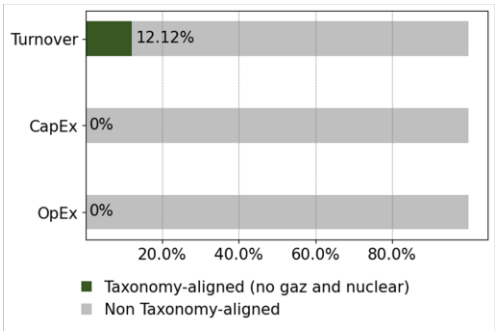
At the reporting date, based on the available reported and estimated issuer data, the management company did not identify any gas or nuclear taxonomy alignment in the investment portfolio.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1.Taxonomy-alignment of investments **including sovereign bonds***



2.Taxonomy-alignment of investments **excluding sovereign bonds***



This graph represents **100%** of the total investments.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities was 1.80%.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 89.68% in sustainable investments with an environmental objective that may include sustainable investments that are not aligned with the EU taxonomy.

The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives.

This is affected by performing an overall sustainability assessment on each investment, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

These themes aim at identifying project financing activities (or issuers which activities or practices):

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 6.45% in projects or issuers that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the issuance or issuer follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion.

These themes aim at identifying issuers which activities or practices (or use of proceeds bonds which aim at financing projects):

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;

- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment.

For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach.

Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices.

Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including

legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at https://www.mirova.com/en/research/voting-and-engagement.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- ***How did the reference benchmark differ from a broad market index?***

  Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***

  Not applicable

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **MIROVA FUNDS - Mirova Euro Green and Sustainable Corporate Bond Fund**

Legal entity identifier: 549300NGBY43BJCJ2T38

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
●● [X] **Yes**	●● [ ] **No**
[X] It made **sustainable investments with an environmental objective:** 67.23%	[ ] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
[X] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[X] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[ ] with a social objective
[X] It made **sustainable investments with a social objective:** 22.71%	[ ] It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to invest in bonds from corporate issuers:

- whose economics activities contribute, or are to risingly contribute, positively through their products, services and/or practices to the achievement of one or

more of the United Nations Sustainable Development Goals (the “SDGs”), and/or –

- use of proceeds bonds whose purpose is to finance projects with a positive environmental and/or social impacts (green, social, green and social bonds).

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the “Taxonomy Regulation”) aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in bonds issued by corporates or in use-of proceeds bonds which proceeds will be applied to finance) economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria.

The alignment of the economics activities of the issuer (or financed by the use-of proceeds bonds) with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

89.95% of the Fund’s net assets were aligned with sustainable investment objectives as of 31/12/2022. Alignment with EU Taxonomy amounted to 9.26%.

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

Some securities selected according to the approach to Impact and ESG assessments in effect before 31.12.2022 meet the criteria for managing the risks of obstruction to the SDGs (DNSH test) and good governance practices but may have a positive contribution assessed as low or unquantifiable.

As the analysis framework has been enhanced to date, the positive contribution of certain securities has been reviewed. An adjustment of the portfolios under the conditions set out in the investment process has been made.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

How did the sustainability indicators perform?

Benchmark: BLOOMBERG EURO AGGREGATE CORPORATE TOTAL RETURN INDEX VALUE UNHEDGED EUR

The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

SUSTAINABILITY OPINION BREAKDOWN*

in % of assets, cash equivalence excluded

	"Committed" / "Positive" opinions
Fund	82.3%
Index	34.9%

Achievement of UN SDGs**

- Committed : Contributes very favorably to achieving the SDGs
- Positive : Contributes positively to achieving the SDGs
- Neutral : In line with some of the SDGs, but impacts are low or unquantified
- Risk : Hinders achievement of the SDGs
- Negative : Strongly opposes achievement of the SDGs
- Not followed : Not rated by either Mirova or ISS ESG

The ESG Opinion is designed to assess whether the investment is compatible with the UN SDGs and is based upon the analysis of Mirova and ISS ESG, a third party.
The opinion does not guarantee a profit or protect against a loss, and does not ensure the stability or safety of the overall portfolio.

CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

in % of assets with Committed/positive opinions

	Mirova pillars	Extent to which an asset contributes to the SDGs corresponding to each pillar Fund	Index
Environment	CLIMATE STABILITY Limit greenhouse gas levels to stabilize global temperature rise under 2°C	54%	23%
	HEALTHY ECO-SYSTEMS Maintain ecologically sound landscape and seas for nature and people	28%	11%
	RESOURCE SECURITY Preserve stocks of natural resources through efficient and circular use	24%	13%
Social	BASIC NEEDS Basic services (food, water, energy, transport, health, etc.) for all	15%	11%
	WELL BEING Enhanced health education, justice and equality of opportunity for all	17%	11%
	DECENT WORK Secure socially inclusive jobs and working conditions for all	10%	8%

The United Nations adopted 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. Please see an overview relating to all SDGs (1-17) on the UN's website: www.un.org/sustainabledevelopment/sustainable-development-goals/.
This chart displays to what extent an asset contributes to the UN Sustainable Development Goals ('SDGs'). Mirova has signed an agreement with Cambridge University, based on a research partnership focusing on sustainable development themes as well as the establishment of a task force in 2013, the Investors Leaders Group. To illustrate the main sustainability impacts of our investments, six impact pillars have been developed, three environmental and three social, for each asset (as displayed on the left). The same assets may contribute to several pillars / SDGs.

The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar).
Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.
* For more information on our methodologies, please refer to our Mirova website : https://www.mirova.com/en/research
**In 2015, all countries around the world agreed on 17 universal sustainable development goals (SDG) to end poverty, combat inequality and injustice and fight against climate change between now and 2030.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

	Fund	Index
	1.5°C	2.5-3°C
Induced Emissions *(tCO_2 / million € company value)*	113.3	181.9
Avoided Emissions *(tCO_2 / million € company value)*	316.2	51.5
Coverage rate *(% of holdings analysed)*	78%	91%

In 2015, Mirova and Carbone 4 jointly developed a method* which assesses carbon data in view of the specific challenges facing a low carbon economy: Carbon Impact Analytics (CIA).
Companies are initially assessed individually according to a specific sector framework. This method focuses on two main indicators:

- "induced" emissions arising from the "lifecycle" of a company's activities, taking into account both direct emissions and those of suppliers and products
- "avoided" emissions due to improvements in energy efficiency or "green" solutions

These indicators are enhanced with an assessment of corporate policies and decarbonisation targets.
Individual company assessments are then used to calculate the fund's alignment with a global warming pathway of 1.5°C to 5°C by 2100.
For more information about our methodologies, please refer to our Mirova website www.mirova.com/en/research/demonstrating-impact.
*As of 05/31/2022, this methodology has changed. The main change concerns how we determine the temperature (which now includes a qualitative analysis of the company's decarbonization strategy), and how we display the temperature (by ranges rather than exact 0.1 precision temperatures).

Overall fund AuM help to avoid

122,161 tCO_2

equivalent to

37,018 European households
In Europe, a household emits an average of 3.3 tCO_2/year for heating and electricity

or

71,859 Cars
In Europe, a standard car emits on average around 1.7 tCO_2/year

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from issuers' activities and practices and assesses the quality of the issuer's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies.

As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which the issuers whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question.

Adverse impacts are prioritized according to the specificities of sectors and business models of issuers or project financed by the use of proceeds bond considered for investment by using a combination of criteria based on:

- analysis of the issuer's exposure or project financed by the bond to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the issuer's exposure or project financed by the bond to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the issuer's footprint (or footprint of the project financed by the bond) on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the issuer's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the investment's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Adverse Sustainability indicator		How PAIs are taken into account by Mirova
Greenhouse gas emissions	**1. GHG emissions**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	- Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO2/kWh.
	5. Share of non-renewable energy consumption and production	- Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	- Integration in qualitative internal analysis when relevant
Biodiversity	**7. Activities negatively affecting biodiversity-sensitive areas**	- Exclusion of companies or projects significantly harming biodiversity sensitive areas - Systematic integration in qualitative internal analysis - Part of controversy analysis
Water	**8. Emissions to water**	- Integration in qualitative internal analysis when relevant
Waste	**9. Hazardous waste and radioactive waste ratio**	- Integration in qualitative internal analysis when relevant
Social and Employee matters	**10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises**	- Exclusion of companies violating UNGC and OECD principles - Systematic integration in qualitative internal analysis - Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	- Exclusion for large companies, case-by-case for small companies or projects - Systematic integration in qualitative internal analysis - Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	13. Board gender diversity	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	- Exclusion (0% sales threshold)
Additional PAI Indicators	**4. Investments in companies without carbon emission reduction initiatives**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights.

The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance.

Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible.

As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country
BBVASM 4.375% 10-29*	Fixed-rate bond	2.09%	Spain

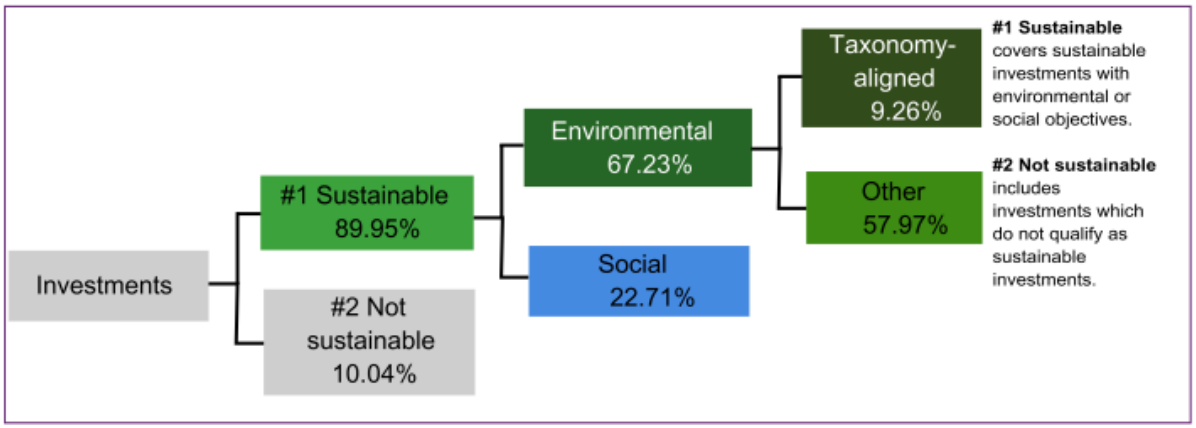
What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 89.95% of the Fund's net assets have been aligned with sustainable investment objectives as of 31/12/2022.

The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?



In which economic sectors were the investments made?

BCLASS Nomenclature. Bond futures are embedded in government bonds

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation"): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives (limited to the objective (a) as of today) is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing.

The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative.

9.26% of the Fund's net assets are aligned with the EU taxonomy as of 31/12/2022.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with EU Taxonomy[1]?

☐ Yes :

☐ In fossil gas ☐ In nuclear energy

☒ No

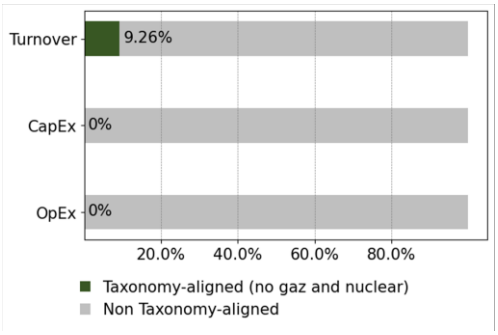
At the reporting date, based on the available reported and estimated issuer data, the management company did not identify any gas or nuclear taxonomy alignment in the investment portfolio.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

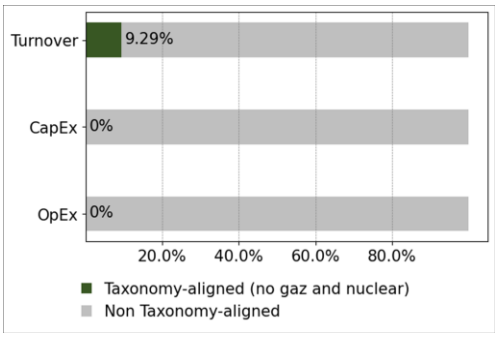
Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1.Taxonomy-alignment of investments **including sovereign bonds***



2.Taxonomy-alignment of investments **excluding sovereign bonds***



This graph represents **100%** of the total investments.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities was 1.23%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 67.23% in sustainable investments with an environmental objective that may include sustainable investments that are not aligned with the EU taxonomy.

The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives.

This is affected by performing an overall sustainability assessment on each investment, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

These themes aim at identifying issuers which activities or practices (or use of proceeds bonds which aim at financing projects):

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 22.71% in issuances or issuers that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the issuance or issuer follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion.

These themes aim at identifying issuers which activities or practices (or use of proceeds bonds which aim at financing projects):

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment.

For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach.

Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices.

Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at https://www.mirova.com/en/research/voting-and-engagement.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- ***How did the reference benchmark differ from a broad market index?***

  Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***

  Not applicable

  Not applicable

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **MIROVA FUNDS - Mirova Euro High Yield Sustainable Bond Fund**

Legal entity identifier: 549300UDCKPF3YTNRZ12

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?

●● [X] Yes	●● [ ] No
[X] It made **sustainable investments with an environmental objective:** 66.11%	[ ] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
[X] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[X] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[ ] with a social objective
[X] It made **sustainable investments with a social objective:** 25.26%	[ ] It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to invest in bonds from corporate issuers whose:

- whose economics activities contribute, or are to risingly contribute, positively through their products, services and/or practices to the achievement of one or

more of the United Nations Sustainable Development Goals (the “SDGs”), and/or

- use of proceeds bonds whose purpose is to finance projects with a positive environmental and/or social impacts (green, social, green and social bonds).

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the “Taxonomy Regulation”) aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in bonds issued by corporates or in use-of proceeds bonds which proceeds will be applied to finance) economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria.

The alignment of the economics activities of the issuer (or financed by the use-of proceeds bonds) with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

91.38% of the Fund’s net assets were aligned with sustainable investment objectives as of 31/12/2022. Alignment with EU Taxonomy amounted to 8.23%.

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

How did the sustainability indicators perform?

Benchmark:ICE BOFA MERRILL LYNCH EUR HY BB-B TOTAL RETURN EUR

The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

ENVIRONMENTAL PROJECTS (%)

"Committed" / "Positive" opinions

Fund: 79.8%

Index: 25.9%

Achievement of UN SDGs**

- Committed : Contributes very favorably to achieving the SDGs
- Positive : Contributes positively to achieving the SDGs
- Neutral : In line with some of the SDGs, but impacts are low or unquantified
- Risk : Hinders achievement of the SDGs
- Negative : Strongly opposes achievement of the SDGs
- Not followed : Not rated by either Mirova or ISS ESG

CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

in % of assets with Committed/positive opinions

	Mirova pillars	Extent to which an asset contributes to the SDGs corresponding to each pillar	
		Fund	Index
Environment	CLIMATE STABILITY Limit greenhouse gas levels to stabilize global temperature rise under 2°C	52%	14%
	HEALTHY ECO-SYSTEMS Maintain ecologically sound landscape and seas for nature and people	28%	9%
	RESOURCE SECURITY Preserve stocks of natural resources through efficient and circular use	30%	11%
Social	BASIC NEEDS Basic services (food, water, energy, transport, health, etc.) for all	16%	8%
	WELL BEING Enhanced health education, justice and equality of opportunity for all	16%	7%
	DECENT WORK Secure socially inclusive jobs and working conditions for all	13%	5%

The United Nations adopted 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. Please see an overview relating to all SDGs (1-17) on the UN's website: www.un.org/sustainabledevelopment/sustainable-development-goals/.
This chart displays to what extent an asset contributes to the UN Sustainable Development Goals ("SDGs"). Mirova has signed an agreement with Cambridge University, based on a research partnership focusing on sustainable development themes as well as the establishment of a task force in 2013, the Investors Leaders Group. To illustrate the main sustainability impacts of our investments, six impact pillars have been developed, three environmental and three social, for each asset (as displayed on the left). The same assets may contribute to several pillars / SDGs.

The ESG Opinion is designed to assess whether the investment is compatible with the UN SDGs and is based upon the analysis of Mirova and ISS ESG, a third party.
The opinion does not guarantee a profit or protect against a loss, and does not ensure the stability or safety of the overall portfolio.
The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar). *
Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.*
Due to active management, portfolio characteristics are subject to change. References to specific securities or industries should not be considered a recommendation.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

	Fund	Index
	1.5°C	2.5-3°C
Induced Emissions *(tCO_2 / million € company value)*	136.3	215.6
Avoided Emissions *(tCO_2 / million € company value)*	206.9	38.4
Coverage rate *(% of holdings analysed)*	70%	71%

In 2015, Mirova and Carbone 4 jointly developed a method* which assesses carbon data in view of the specific challenges facing a low carbon economy: Carbon Impact Analytics (CIA).
Companies are initially assessed individually according to a specific sector framework. This method focuses on two main indicators:

- "induced" emissions arising from the "lifecycle" of a company's activities, taking into account both direct emissions and those of suppliers and products
- "avoided" emissions due to improvements in energy efficiency or "green" solutions

These indicators are enhanced with an assessment of corporate policies and decarbonisation targets.
Individual company assessments are then used to calculate the fund's alignment with a global warming pathway of 1.5°C to 5°C by 2100.
For more information about our methodologies, please refer to our Mirova website www.mirova.com/en/research/demonstrating-impact.
*As of 05/31/2022, this methodology has changed. The main change concerns how we determine the temperature (which now includes a qualitative analysis of the company's decarbonization strategy), and how we display the temperature (by ranges rather than exact 0.1 precision temperatures).

Overall fund AuM help to avoid

10,458 tCO_2

equivalent to

3,169 European households
In Europe, a household emits an average of 3.3 tCO_2/year for heating and electricity

or

6,152 Cars
In Europe, a standard car emits on average around 1.7 tCO_2/year

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from issuers' activities and practices and assesses the quality of the issuer's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies.

As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which the issuers whose economic activities are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question.

Adverse impacts are prioritized according to the specificities of sectors of each issuer or project financed by the use of proceeds bond considered for investment by using a combination of criteria based on:

- analysis of the issuer's exposure or project financed by the bond to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the issuer's exposure or project financed by the bond to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the issuer's footprint (or footprint of the project financed by the bond) on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the issuer's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the investment's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Adverse Sustainability indicator		How PAIs are taken into account by Mirova
Greenhouse gas emissions	**1. GHG emissions**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	- Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO2/kWh.
	5. Share of non-renewable energy consumption and production	- Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	- Integration in qualitative internal analysis when relevant
Biodiversity	**7. Activities negatively affecting biodiversity-sensitive areas**	- Exclusion of companies or projects significantly harming biodiversity sensitive areas - Systematic integration in qualitative internal analysis - Part of controversy analysis
Water	**8. Emissions to water**	- Integration in qualitative internal analysis when relevant
Waste	**9. Hazardous waste and radioactive waste ratio**	- Integration in qualitative internal analysis when relevant
Social and Employee matters	**10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises**	- Exclusion of companies violating UNGC and OECD principles - Systematic integration in qualitative internal analysis - Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	- Exclusion for large companies, case-by-case for small companies or projects - Systematic integration in qualitative internal analysis - Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	13. Board gender diversity	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	- Exclusion (0% sales threshold)
Additional PAI Indicators	**4. Investments in companies without carbon emission reduction initiatives**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights.

The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance.

Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible.

As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

BCLASS Nomenclature. Bond futures are embedded in government bonds

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation"): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives (limited to the objective (a) as of today) is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing.

The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative.

8.23% of the Fund's net assets are aligned with the EU taxonomy as of 31/12/2022.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with EU Taxonomy[1]?

☐ Yes :

☐ In fossil gas ☐ In nuclear energy

☒ No

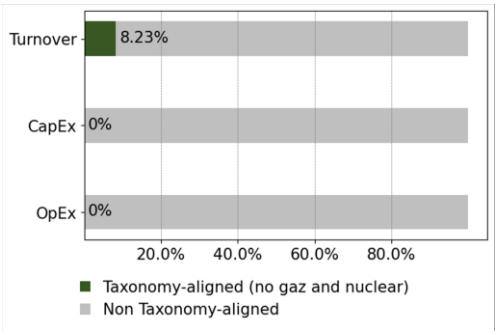
At the reporting date, based on the available reported and estimated issuer data, the management company did not identify any gas or nuclear taxonomy alignment in the investment portfolio.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

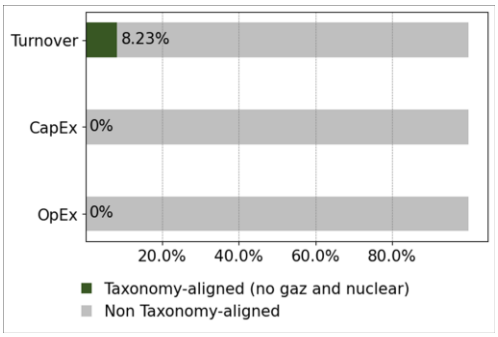
Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1.Taxonomy-alignment of investments **including sovereign bonds***



2.Taxonomy-alignment of investments **excluding sovereign bonds***



This graph represents **100%** of the total investments.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities was 2.13%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 66.11% in sustainable investments with an environmental objective that may include sustainable investments that are not aligned with the EU taxonomy.

The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives.

This is affected by performing an overall sustainability assessment on each investment, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

These themes aim at identifying issuers which activities or practices (or use of proceeds bonds which aim at financing projects):

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 25.26% in issuances or issuers that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the issuances or issuers follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion.

These themes aim at identifying companies which activities or practices (or use of proceeds bonds which aim at financing projects):

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment.

For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach.

Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices.

Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at https://www.mirova.com/en/research/voting-and-engagement.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- ***How did the reference benchmark differ from a broad market index?***

  Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***

  Not applicable

- ***How did this financial product perform compared with the reference benchmark?***

  Not applicable

- ***How did this financial product perform compared with the broad market index?***

  Not applicable

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **MIROVA FUNDS - Mirova Euro Short Term Sustainable Bond Fund**

Legal entity identifier: 549300NWRGV486AUWX65

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
●● [X] **Yes**	●● [ ] **No**
[X] It made **sustainable investments with an environmental objective:** 78.84%	[ ] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
[X] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[X] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[ ] with a social objective
[X] It made **sustainable investments with a social objective:** 13.74%	[ ] It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to invest in:

- use of proceeds bonds issued by corporate issuers, sovereign or agencies whose purpose is to finance projects with a positive environmental and/or social impacts (green, social, green and social bonds); and/or

- conventional bonds from corporate issuers whose economics activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the "SDGs").

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the "Taxonomy Regulation") aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in bonds issued by corporates or in use-of proceeds bonds which proceeds will be applied to finance) economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria.

The alignment of the economics activities of the issuer or the project to be financed by the use of proceeds bonds with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, The Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

92.58% of the Fund's net assets were aligned with sustainable investment objectives as of 31/12/2022. Alignment with EU Taxonomy amounted to 22.51%.

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

How did the sustainability indicators perform?

Benchmark: BLOOMBERG EUROAGG 1-3 YEAR TOTAL RETURN INDEX VALUE UNHEDGED EUR

The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

ENVIRONMENTAL PROJECTS (%)

Renewable energy	31.9	Socioeconomic integration, advancement & empowerment	1.0
Clean transportation	20.9		
Energy efficiency	20.5	Education	0.4
Diversified	14.8	Affordable housing	0.3
Employment generation (SME financing / microfinance)	5.7	Sustainable waste management	0.3

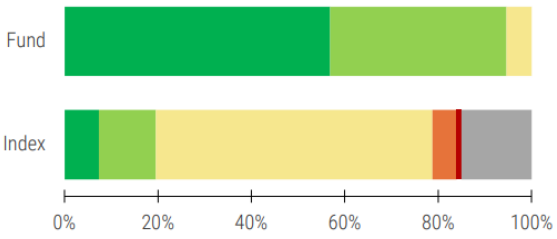
Sustainable land use	2.7	Health	0.0
Sustainable water & wastewater management	1.3		

DISTRIBUTION BY SUSTAINABILITY IMPACTS (%)

Significant	52.1
High	47.9

SUSTAINABILITY OPINION BREAKDOWN*

in % of assets, cash equivalence excluded



"Committed" / "Positive" opinions

94.6%

19.6%

Achievement of UN SDGs**

- Committed : Contributes very favorably to achieving the SDGs
- Positive : Contributes positively to achieving the SDGs
- Neutral : In line with some of the SDGs, but impacts are low or unquantified
- Risk : Hinders achievement of the SDGs
- Negative : Strongly opposes achievement of the SDGs
- Not followed : Not rated by either Mirova or ISS ESG

CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

in % of assets with Committed/positive opinions

Mirova pillars		Extent to which an asset contributes to the SDGs corresponding to each pillar	
		Fund	Index
Environment	CLIMATE STABILITY Limit greenhouse gas levels to stabilize global temperature rise under 2°C	72%	14%
	HEALTHY ECO-SYSTEMS Maintain ecologically sound landscape and seas for nature and people	49%	4%
	RESOURCE SECURITY Preserve stocks of natural resources through efficient and circular use	34%	5%
Social	BASIC NEEDS Basic services (food, water, energy, transport, health, etc.) for all	7%	10%
	WELL BEING Enhanced health education, justice and equality of opportunity for all	19%	6%
	DECENT WORK Secure socially inclusive jobs and working conditions for all	9%	5%

The United Nations adopted 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. Please see an overview relating to all SDGs (1-17) on the UN's website: www.un.org/sustainabledevelopment/sustainable-development-goals/.
This chart displays to what extent an asset contributes to the UN Sustainable Development Goals ("SDGs"). Mirova has signed an agreement with Cambridge University, based on a research partnership focusing on sustainable development themes as well as the establishment of a task force in 2013, the Investors Leaders Group. To illustrate the main sustainability impacts of our investments, six impact pillars have been developed, three environmental and three social, for each asset (as displayed on the left). The same assets may contribute to several pillars / SDGs.

The ESG Opinion is designed to assess whether the investment is compatible with the UN SDGs and is based upon the analysis of Mirova and ISS ESG, a third party.
The opinion does not guarantee a profit or protect against a loss, and does not ensure the stability or safety of the overall portfolio.
The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar). *
Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.*
Due to active management, portfolio characteristics are subject to change. References to specific securities or industries should not be considered a recommendation.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

	Fund	Index
	1.5°C	2-2.5°C
Induced Emissions *(tCO_2 / million € company value)*	178.8	149.9
Avoided Emissions *(tCO_2 / million € company value)*	461.3	21.6
Coverage rate *(% of holdings analysed)*	92%	91%

In 2015, Mirova and Carbone 4 jointly developed a method* which assesses carbon data in view of the specific challenges facing a low carbon economy: Carbon Impact Analytics (CIA).
Companies are initially assessed individually according to a specific sector framework. This method focuses on two main indicators:

- "induced" emissions arising from the "lifecycle" of a company's activities, taking into account both direct emissions and those of suppliers and products
- "avoided" emissions due to improvements in energy efficiency or "green" solutions

These indicators are enhanced with an assessment of corporate policies and decarbonisation targets.
Individual company assessments are then used to calculate the fund's alignment with a global warming pathway of 1.5°C to 5°C by 2100.
For more information about our methodologies, please refer to our Mirova website www.mirova.com/en/research/demonstrating-impact.
*As of 05/31/2022, this methodology has changed. The main change concerns how we determine the temperature (which now includes a qualitative analysis of the company's decarbonization strategy), and how we display the temperature (by ranges rather than exact 0.1 precision temperatures).

Overall fund AuM help to avoid

138,404 tCO_2

equivalent to

41,940 European households
In Europe, a household emits an average of 3.3 tCO_2/year for heating and electricity

or

81,414 Cars
In Europe, a standard car emits on average around 1.7 tCO_2/year

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from issuers' activities and practices and assesses the quality of the issuer's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies.

As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which issuer whose economic activities are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question.

Adverse impacts are prioritized according to the specificities of sectors of each issuer or project financed by the use of proceeds bond considered for investment by using a combination of criteria based on:

- analysis of the issuer's exposure or project financed by the bond to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the issuer's exposure or project financed by the bond to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the issuer's footprint (or footprint of the project financed by the bond) on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the issuer's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the investment's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Adverse Sustainability indicator		How PAIs are taken into account by Mirova
Greenhouse gas emissions	**1. GHG emissions**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	- Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO2/kWh.
	5. Share of non-renewable energy consumption and production	- Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	- Integration in qualitative internal analysis when relevant
Biodiversity	**7. Activities negatively affecting biodiversity-sensitive areas**	- Exclusion of companies or projects significantly harming biodiversity sensitive areas - Systematic integration in qualitative internal analysis - Part of controversy analysis
Water	**8. Emissions to water**	- Integration in qualitative internal analysis when relevant
Waste	**9. Hazardous waste and radioactive waste ratio**	- Integration in qualitative internal analysis when relevant
Social and Employee matters	**10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises**	- Exclusion of companies violating UNGC and OECD principles - Systematic integration in qualitative internal analysis - Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	- Exclusion for large companies, case-by-case for small companies or projects - Systematic integration in qualitative internal analysis - Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	13. Board gender diversity	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	- Exclusion (0% sales threshold)
Additional PAI Indicators	**4. Investments in companies without carbon emission reduction initiatives**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights.

The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance.

Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible.

As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country

BCLASS Nomenclature. Bond futures are embedded in government bonds

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation"): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives (limited to the objective (a) as of today) is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing.

The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative.

22.51% of the Fund's net assets are aligned with the EU taxonomy as of 31/12/2022.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with EU Taxonomy[1]?

☐ Yes :

☐ In fossil gas ☐ In nuclear energy

☒ No

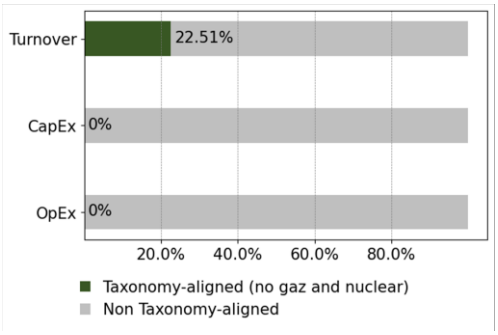
At the reporting date, based on the available reported and estimated issuer data, the management company did not identify any gas or nuclear taxonomy alignment in the investment portfolio.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

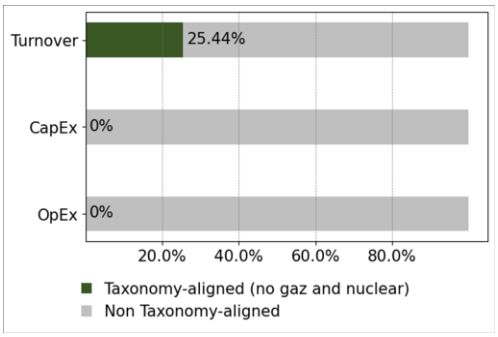
Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1.Taxonomy-alignment of investments **including sovereign bonds***



2.Taxonomy-alignment of investments **excluding sovereign bonds***



This graph represents **100%** of the total investments.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities was 1.26%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 78.84% in sustainable investments with an environmental objective that may include sustainable investments that are not aligned with the EU taxonomy.

The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives.

This is affected by performing an overall sustainability assessment on each investment, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

These themes aim at identifying project financing activities (or issuers which activities or practices):

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 13.74% in projects or issuers that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the issuance or issuer follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion.

These themes aim at identifying project financing activities (or issuers which activities or practices):

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment.

For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach.

Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices.

Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at https://www.mirova.com/en/research/voting-and-engagement.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- ***How did the reference benchmark differ from a broad market index?***

  Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***

- ***How did this financial product perform compared with the reference benchmark?***

  Not applicable

- ***How did this financial product perform compared with the broad market index?***

  Not applicable

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **MIROVA FUNDS - Mirova Europe Sustainable Economy Fund**
Legal entity identifier: 549300TVT6YRMQR4DO33

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?	
●● [X] **Yes**	●● [ ] **No**
[X] It made **sustainable investments with an environmental objective:** 64.36%	[ ] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
[X] in economic activities that qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
[X] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	[ ] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	[ ] with a social objective
[X] It made **sustainable investments with a social objective:** 32.48%	[ ] It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to invest in bonds and/or equity securities issued by companies:

- that address opportunities linked to major sustainable themes such as biodiversity, climate, diversity human capital, health human development, and
- whose economics activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the "SDGs").

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the "Taxonomy Regulation") aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria.

The alignment of the economics activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

96.85% of the Fund's net assets were aligned with sustainable investment objectives as of 31/12/2022. Alignment with EU Taxonomy amounted to 9.18%.

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

How did the sustainability indicators perform?

Benchmark: 50.00%: MSCI EUROPE NET TOTAL RETURN EUR INDEX + 50.00%: BLOOMBERG EURO AGGREGATE CORPORATE TOTAL RETURN INDEX VALUE UNHEDGED EUR

The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

SUSTAINABILITY OPINION BREAKDOWN*

in % of assets, cash equivalence excluded

	"Committed" / "Positive" opinions
Fund	90.3%
Index	41.9%

Achievement of UN SDGs**

- Committed : Contributes very favorably to achieving the SDGs
- Positive : Contributes positively to achieving the SDGs
- Neutral : In line with some of the SDGs, but impacts are low or unquantified
- Risk : Hinders achievement of the SDGs
- Negative : Strongly opposes achievement of the SDGs
- Not followed : Not rated by either Mirova or ISS ESG

The ESG Opinion is designed to assess whether the investment is compatible with the UN SDGs and is based upon the analysis of Mirova and ISS ESG, a third party.
The opinion does not guarantee a profit or protect against a loss, and does not ensure the stability or safety of the overall portfolio.

CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

in % of assets with Committed/positive opinions

Mirova pillars		Extent to which an asset contributes to the SDGs corresponding to each pillar	
		Fund	Index
Environment	CLIMATE STABILITY Limit greenhouse gas levels to stabilize global temperature rise under 2°C	63%	25%
	HEALTHY ECO-SYSTEMS Maintain ecologically sound landscape and seas for nature and people	34%	10%
	RESOURCE SECURITY Preserve stocks of natural resources through efficient and circular use	42%	14%
Social	BASIC NEEDS Basic services (food, water, energy, transport, health, etc.) for all	21%	14%
	WELL BEING Enhanced health education, justice and equality of opportunity for all	33%	18%
	DECENT WORK Secure socially inclusive jobs and working conditions for all	19%	12%

The United Nations adopted 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. Please see an overview relating to all SDGs (1-17) on the UN's website: www.un.org/sustainabledevelopment/sustainable-development-goals/.
This chart displays to what extent an asset contributes to the UN Sustainable Development Goals ("SDGs"). Mirova has signed an agreement with Cambridge University, based on a research partnership focusing on sustainable development themes as well as the establishment of a task force in 2013, the Investors Leaders Group. To illustrate the main sustainability impacts of our investments, six impact pillars have been developed, three environmental and three social, for each asset (as displayed on the left). The same assets may contribute to several pillars / SDGs.

The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar).
Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.
* For more information on our methodologies, please refer to our Mirova website : https://www.mirova.com/en/research
**In 2015, all countries around the world agreed on 17 universal sustainable development goals (SDG) to end poverty, combat inequality and injustice and fight against climate change between now and 2030.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

	Fund	Index
	1.5°C	2.5-3°C
Induced Emissions *(tCO_2 / million € company value)*	130.4	191.8
Avoided Emissions *(tCO_2 / million € company value)*	140.2	31.1
Coverage rate *(% of holdings analysed)*	86%	95%

In 2015, Mirova and Carbone 4 jointly developed a method* which assesses carbon data in view of the specific challenges facing a low carbon economy: Carbon Impact Analytics (CIA).
Companies are initially assessed individually according to a specific sector framework. This method focuses on two main indicators:

- "induced" emissions arising from the "lifecycle" of a company's activities, taking into account both direct emissions and those of suppliers and products
- "avoided" emissions due to improvements in energy efficiency or "green" solutions

These indicators are enhanced with an assessment of corporate policies and decarbonisation targets.
Individual company assessments are then used to calculate the fund's alignment with a global warming pathway of 1.5°C to 5°C by 2100.
For more information about our methodologies, please refer to our Mirova website www.mirova.com/en/research/demonstrating-impact.
*As of 05/31/2022, this methodology has changed. The main change concerns how we determine the temperature (which now includes a qualitative analysis of the company's decarbonization strategy), and how we display the temperature (by ranges rather than exact 0.1 precision temperatures).

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies.

As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question.

Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and

governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Adverse Sustainability indicator		How PAIs are taken into account by Mirova
Greenhouse gas emissions	**1. GHG emissions**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	- Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO2/kWh.
	5. Share of non-renewable energy consumption and production	- Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	- Integration in qualitative internal analysis when relevant
Biodiversity	**7. Activities negatively affecting biodiversity-sensitive areas**	- Exclusion of companies or projects significantly harming biodiversity sensitive areas - Systematic integration in qualitative internal analysis - Part of controversy analysis
Water	**8. Emissions to water**	- Integration in qualitative internal analysis when relevant
Waste	**9. Hazardous waste and radioactive waste ratio**	- Integration in qualitative internal analysis when relevant
Social and Employee matters	**10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises**	- Exclusion of companies violating UNGC and OECD principles - Systematic integration in qualitative internal analysis - Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	- Exclusion for large companies, case-by-case for small companies or projects - Systematic integration in qualitative internal analysis - Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	13. Board gender diversity	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	- Exclusion (0% sales threshold)
Additional PAI Indicators	**4. Investments in companies without carbon emission reduction initiatives**	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights.

The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance.

Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible.

As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country
ASTRAZENECA LN GBp	Pharmaceuticals	2.16%	United Kingdom
ROCHE SE CHF	Pharmaceuticals	1.83%	Switzerland
SANOFI FP EUR	Pharmaceuticals	1.77%	France
ASML HOLDING NA EUR	Semiconductor Equipment	1.71%	Netherlands
AXA FP EUR	Multi-Line Insurance	1.63%	France
SAINT GOBAIN FP EUR	Building Products	1.53%	France
INTESA IM EUR	Diversified Banks	1.51%	Italy
L'OREAL FP EUR	Personal Products	1.49%	France
KBC GROUP BB EUR	Diversified Banks	1.49%	Belgium

DANONE FP EUR	Packaged Foods & Meats	1.43%	France
AIR LIQUIDE FP EUR	Industrial Gases	1.43%	France
SEB AB-A SS SEK	Diversified Banks	1.36%	Sweden
ALSTOM FP EUR	Construction Machinery & Heavy Trucks	1.35%	France
CREDIT FP EUR	Diversified Banks	1.33%	France
RENAULT SA FP EUR	Automobile Manufacturers	1.33%	France

Please note that the name of the investment and the percentage of assets may differ from the ones shown in the portfolio.

The displayed country is the country of risk

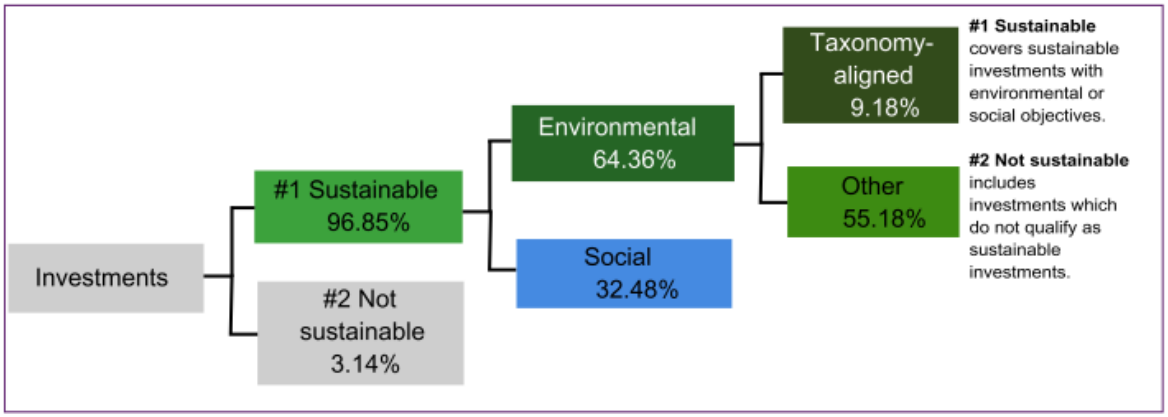
What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 96.85% of the Fund's net assets have been aligned with sustainable investment objectives as of 31/12/2022.

The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?



In which economic sectors were the investments made?

SECTOR BREAKDOWN (%)	Fund	Index
Corporates	38.9	50.0
Financial	15.8	21.9
Defensive	14.5	15.7
Cyclical	8.6	12.3
Agencies and Supranational	5.2	-
Other Products	53.1	50.0
Cash & cash equivalent	2.7	-

BCLASS Nomenclature. Bond futures are embedded in government bonds

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation"): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives (limited to the objective (a) as of today) is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing.

The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative.

9.18% of the Fund's net assets are aligned with the EU taxonomy as of 31/12/2022.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with EU Taxonomy[1]?

☐ Yes :

☐ In fossil gas ☐ In nuclear energy

☒ No

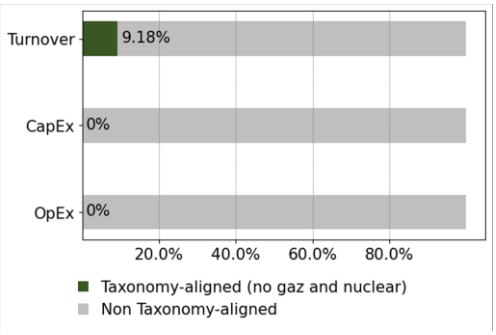
At the reporting date, based on the available reported and estimated issuer data, the management company did not identify any gas or nuclear taxonomy alignment in the investment portfolio.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

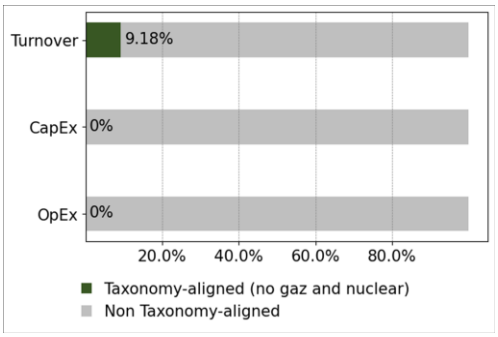
Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1.Taxonomy-alignment of investments **including sovereign bonds***



2.Taxonomy-alignment of investments **excluding sovereign bonds***



This graph represents **100%** of the total investments.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

- ***What was the share of investments made in transitional and enabling activities?***

  The share of investments in transitional and enabling activities was 3.63%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 64.36% in sustainable investments with an environmental objective that may include sustainable investments that are not aligned with the EU taxonomy.

The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 32.48% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion.

These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment.

For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach.

Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices.

Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at https://www.mirova.com/en/research/voting-and-engagement.

How did this financial product perform compared to the reference sustainable benchmark?
